#### 3.1 COALITION/GSS-GSM I -1

**Reference:**

- LEI Evidence Section 3.5 Macroeconomic Impact

**Request:**

Please explain how the results of your macroeconomic analysis would change if you used more recent Statistics Canada data and took into account the six years of anticipated 7.9% rate increases and the one year of anticipated 4.54% rate increase, as contemplated in Appendix 3.8 to Manitoba Hydro's Application, MH16 Update with Interim.

**Response:**

With respect more recent Statistics Canada data, LEI notes that it given the limited time, it was not able to update this analysis using the IMPLAN. Nevertheless, the proposed rate increases will still likely to result in material (or substantial) job losses, labor income reduction, and decline in value added, and lower output level.

Please refer to LEI's response to PUB/GSS-GSM-KAP -14 for an extension of the analysis including the proposed rate increases out to 2024/25.
