

## **2017/18 & 2018/19 Manitoba Hydro Electric General Rate Application**

### **Green Action Centre Undertaking #43**

GAC to provide information about the cost impact of the rate design proposal with a higher consumption block for on-reserve residential consumers.

### **Response**

In RR 39, GAC estimates that a proportionally higher discount block for on-reserve heating customers would be 69% higher than for general ESH customers. The 141,011 on-reserve ESH customers account for 6.8% of the total 2,059,032 ESH bills. Hence, the increase in the ESH lost revenues and recovery rates would be 4.7% of Mr. Chernick's estimate of the ESH effects, or about \$908,000 in lost revenues and an increase of \$0.00019/kWh if the costs are recovered from the residential customers or \$0.00005/kWh if the cost is spread over all classes.
