

“When You Talk - We Listen!”

MANITOBA PUBLIC UTILITIES BOARD

Re: MANITOBA PUBLIC INSURANCE CORPORATION (MPI)  
2023/2024 GENERAL RATE APPLICATION  
HEARING

Before Board Panel:

- Irene Hamilton, K.C.- Panel Chairperson
- Robert Gabor, K.C. - Board Chair
- Susan Nemec - Board Member
- George Bass, K.C. - Board Member
- Susan Boulter - Board Member

HELD AT:

Public Utilities Board  
400, 330 Portage Avenue  
Winnipeg, Manitoba  
November 9, 2022

Pages 2683 to 2932  
Day 13

1 --- Upon commencing at 9:01 a.m.

2

3 THE PANEL CHAIRPERSON: Good morning,  
4 everyone. We'll continue this morning with closing  
5 remarks. Mr. Williams...?

6

7 CLOSING COMMENTS BY DR. BYRON WILLIAMS:

8 DR. BYRON WILLIAMS: Yes. It -- it  
9 will be a tag team this morning. All the thoughtful  
10 contributions will be from Mr. Klassen, but you will  
11 hear more from -- from me.

12 And if we could enter as an exhibit the  
13 PowerPoint outlining the closing arguments of CAC  
14 (Manitoba) and have it marked as CAC-7.

15

17 Closing Arguments of CAC  
18 (Manitoba)

19

20 CONTINUED BY DR. BYRON WILLIAMS:

21 DR. BYRON WILLIAMS: And perhaps we  
22 can return to slide 2, please. Just by way of  
23 roadmap, it will be a bit of a lengthy journey this  
24 morning in terms of our clients' submissions. We are  
25 going to start with a shout out to some very important

1 people, including Ms. Schubert, Ms. Jassal, and -- and  
2 CAC (Manitoba).

3           We'll -- we'll be giving you a hint  
4 directionally of the type of signal our client is  
5 seeking from this hearing. We'll go through a bit of  
6 the -- the legal under -- underpinning of this hearing  
7 and then really get into some of the key issues. So  
8 that's your roadmap.

9           I'll try and tell you when we're  
10 changing subjects, but if we can move to slide 3. I  
11 cannot speak for anyone else, and I'm not trying to  
12 testify, but I will observe that I'm exhausted. And I  
13 can't imagine how tired the folks at MPI regulatory  
14 affairs or the PUB staff are.

15           But our clients did ask us to start  
16 with a -- a thank you to the people behind the scene  
17 to acknowledge their extraordinarily hard work. And a  
18 couple of folks we do want to flag for special  
19 recognition. One is Ms. Schubert who is truly amazing  
20 and a great ambassador for the Public Utilities Board.

21           And we're also mindful of our friend  
22 Mr. Guerra's comments about Ms. Jassal and the amazing  
23 work she did really for a while all by herself in  
24 terms of MPI regulatory affairs, and we want to  
25 acknowledge that.

1                   And as always, we want to start with  
2 thanking our CAC (Manitoba) board who've been really  
3 involved in this hearing and are really gifted and  
4 intense concerning the Advisory Committee.

5                   And many of the words that you hear  
6 today won't be the legal team's words, they'll be us  
7 trying to convey the instructions and the -- the  
8 notions and analysis that -- that we've heard from  
9 both our advisory team as well as the CAC board.

10 Slide 4, please.

11                   We'll get to our ultimate  
12 recommendations near the end, but in this hearing and,  
13 in this submission, our clients are seeking a strong  
14 signal from the Public Utilities Board.

15                   They're asking that it be reflected in  
16 the revenue requirement that Manitoba Public Insurance  
17 is on an unreasonable and imprudent path in terms of  
18 expenditure control. That is our number 1 message.  
19 That's the number 1 signal we're trying to seek.

20                   Our clients are also seeking  
21 recognition of the need to modernize the Manitoba  
22 Public Insurance approach to claims incurred, which is  
23 a very significant part of the rate-making process, in  
24 the range of seven hundred thousand dollars  
25 (\$700,000), to achieve best estimates.

1                   And although we -- we suspect that our  
2 friends from CMMG will be more powerful on this point,  
3 our clients are also seeking a signal about the need  
4 for a time-sensitive path to address enduring  
5 inequities in terms of Driver Safety Rating.

6                   We couldn't go without citing the  
7 amazing Court of Appeal decision of Madam Justice  
8 Steel, but it is important to remind ourselves of the  
9 challenging and important regulatory role.

10                   And it all starts with the reality of  
11 Bonbright that this is a monopoly. And the reason  
12 that we have public utility regulation is because we  
13 don't have market forces to discipline monopolies. We  
14 rely upon the independent regulator to do that.

15                   And that extremely challenging role for  
16 the independent regulator is one of balance; the  
17 financial interests of the Corporation, as well as the  
18 health and well-being and fairness to ratepayers --  
19 fairness to ratepayers as against the interests of the  
20 Corporation, and fairness among ratepayers, setting  
21 just and reasonable rates in accordance with the  
22 statute and in the public interest. Slide 6, please.  
23 Thank you.

24                   I keep commenting about questions I  
25 wish I would have asked. And there was a question on

1 day 2 of this Hearing in terms of what was going on  
2 because there had been a flurry of changes in the  
3 Manitoba Public Insurance application, not only in the  
4 October 7th update, but literally on day 2 of the  
5 Hearing where we received that notice of the two  
6 hundred and eighty-three (283) additional fu -- full-  
7 time equivalents as compared to the previous year's  
8 budget.

9                   And so, the Board -- Board member  
10 asked, is there something unique going on in this  
11 General Rate Application. And Mr. Giesbrecht, to his  
12 credit, acknowledged that there was. He said that, in  
13 other hearings, while there's been change, the quantum  
14 or the delta, generally speaking, has been much less.

15                   So, our clients are asking this Board  
16 in trying to grapple with what is unique about this  
17 Hearing is to recognize the unprecedented nature of  
18 this hearing.

19                   If the Board goes back through its  
20 decisions over the last two (2) decades, you will not  
21 see such significant year-over-year changes in terms  
22 of proposed operating expenses or full-time  
23 equivalents over the last twenty (20) years. That is  
24 one (1) of the key unique elements of this Hearing.

25                   The other unique element of this

1 Hearing from our clients' perspective is mid-hearing,  
2 of course, we've seen a fundamental diminishment of  
3 the Public Utility Board's authority related to  
4 financial targets for rate-setting purposes and in  
5 terms of rate rebates.

6           And if we go back again over those last  
7 two (2) decades, perhaps only Mr. Cathcart and I can -  
8 - can remember them well, just think of how central to  
9 the rate-setting process the PUB authority to set  
10 financial targets for rate setting purposes and to  
11 initiate rate rebates has.

12           And this made a profound difference to  
13 independent rate regulation and in terms of  
14 disciplining the Corporation. The PUB's leadership  
15 has incented risk-based analysis rather than  
16 mechanistic formulas for financial targets.

17           It has deprived Manitoba Public  
18 Insurance of a bad management cushion in the form of  
19 excessive reserves and it has delivered real savings,  
20 or real rebates, in the form of \$1 billion in rebates  
21 to Manitobans.

22           By virtue of BITSA and the Capital  
23 Management Plan, that has changed. The choice of  
24 whether and if to trigger a rebate application now  
25 rests with Manitoba Public Insurance. There's a

1 discretion for it, and the PUB no longer has that  
2 authority, so that is a unique element and a material  
3 change.

4                   Our client was quite interested in a  
5 discussion Chair Person Gabor and perhaps Hearing  
6 Chairperson Hamilton had with Manitoba Public  
7 Insurance in terms of Manitoba Public Insurance's  
8 discussion of the Manitoba advantage, the -- our place  
9 in the -- in the world in comparison to other  
10 insurance companies and in comparison to other  
11 monopolies.

12                   And our clients, like many Manitobans,  
13 is -- is proud and invested in the system that we have  
14 created in Manitoba, but that system, our clients urge  
15 you to acknowledge, is not a product exclusively of  
16 MPI. There's an intertwined balance in terms of  
17 contributions to that system, including from  
18 legislators who intervened in the mid 1990s with the  
19 Personal Injury Protection Plan and -- and provided  
20 important savings and important value to consumers.

21                   There's been an investment in the  
22 Manitoba advantage by Manitoba Public Insurance staff  
23 and executives over time who have balanced relatively  
24 high service levels with a commitment to vigorous cost  
25 controls, including three (3) key performance

1 indicators as a way to set aggressive targets and  
2 measure prudence and performance.

3           And some -- the Board can refer to  
4 prior orders, but also some in this room will remember  
5 when the former CEO for Manitoba Public Insurance came  
6 in and took this room by storm, entrenching key  
7 performance indicators as a way to measure, incent,  
8 and evaluate performance, disrupting relationships  
9 with suppliers.

10           And so, a significant part of the  
11 Manitoba advantage is from that vigorous balancing act  
12 that Manitoba Public Insurance used to perform,  
13 balancing high customer service standards with  
14 vigorous cost controls.

15           Manitoba advantage is also a product of  
16 Interveners; our friends from CMMG, Bike Winnipeg, the  
17 Taxicab Coalition, and others, and the independent  
18 experts they have brought to the Hearing.

19           And when we talk about the investment  
20 portfolio, the undue risk that Manitoba Public  
21 Insurance assumed in their -- in their 2018 policy and  
22 the improvements that they're making, the roots of  
23 many of those improvements come from one of those  
24 independent experts, Mr. Viola, who you've heard about  
25 from time to time in this Hearing.

1                   And, of course, we can't understand the  
2 Manitoba advantage, a relative position compared to  
3 other insurance companies, without looking at the  
4 independent regulator.

5                   And as we go to the next slide, in the  
6 course of this Hearing, Ms. Low and I had a discussion  
7 of -- of regulators and provincial regulators across  
8 Manitoba. And she agreed that the level of rigour  
9 varies.

10                   And, clearly, in Manitoba, to the  
11 extent that we have an advantage, it's because of --  
12 to a large degree the leadership of this Board.

13                   Slide 10 talks about what this Board  
14 has said in recent years in terms of prudence and  
15 reasonableness, and prudent cost control.

16                   We start with a quote from an MPI Order  
17 176/'19 on slide 10. The Board reminds us that one of  
18 the key elements of its independent review function  
19 and rate-setting function is ensuring that actual and  
20 projected costs are necessary and prudent.

21                   Going back a year, we see the Board  
22 responding to the vigour with which Manitoba Public  
23 Insurance was approaching that -- that balance between  
24 service and cost control, and supporting MPI's efforts  
25 at the time to reduce operating expenses and to

1 optimize staffing levels.

2                   On the third quote on this page, being  
3 slide 10, we see again the -- the Public Utilities  
4 Board stepping in on another important so-called  
5 generational information -- information technology  
6 product, the physical damage re-engineering project.  
7 And speaking to the challenges the Corporation was  
8 experiencing in controlling expenditures. Slide 11,  
9 please.

10                   This is -- the points on this page are  
11 not from a MPI decision, but they are from a Hydro  
12 decision, Order 69/'19.

13                   And here, again, we see the Public  
14 Utilities Board's vigorous approach to cost  
15 containment and that essential balance between service  
16 and efficiency, using -- encouraging the use of -- use  
17 of stretch targets to mitigate inflationary pressures,  
18 and saying that, If you're coming to us with cost  
19 increases -- proposed cost increases, there's got to  
20 be evidence to justify it. Highlighting the need for  
21 evidence-based information to support operating  
22 expenditure decisions.

23                   And in this Hearing -- in this Hearing  
24 above all, given the unprecedented, over the last two  
25 (2) decades, challenges to operating expenses and the

1 14 percent growth year over year in full-time  
2 equivalents, that approach of the Public Utilities  
3 Board is, in our clients' submission, needed more than  
4 ever.

5                   It has been on slide 12 surprisingly  
6 difficult to get clear information on what this re-  
7 application actually means to folks in North Coaban  
8 (phonetic) or in Sirius or in Thompson, or in  
9 Pichitimack.

10                   In cross-examination of the MPI's CEO  
11 and trying to get guidance from him in terms of  
12 addressing the actual implications of the GRA, he  
13 wasn't anxious to answer those questions. But he was  
14 quite keen to tell us how Manitobans should feel about  
15 this Application.

16                   In terms of understanding the  
17 Application, our clients appreciate and endorse and  
18 accept the explanation provided by Public Utilities  
19 Board Counsel on Monday.

20                   They accept the description of the  
21 overall premium change, when you can take the combined  
22 impact of a negative 0.05 percent rate decrease, with  
23 a 5.5 percent impact of removing the capital release  
24 provision leads to, on average, a 5.5 percent overall  
25 premium increase.

1                   As Manitobans on average experience the  
2 rate proposal, if approved, in their expenditures on  
3 average, they're looking at a pretty significant  
4 premium increase.

5                   In accepting the Board's calculations,  
6 under the MPI Application, about 68 percent of  
7 vehicles would see a premium increase, with 13 percent  
8 receiving no change in rates. The remaining 19  
9 percent are expected to receive a premium decrease.

10                   As Manitobans experience this rate  
11 application, if approved, this is a big hit.

12                   I won't go through this slide in  
13 detail, but again, our client does accept the  
14 description of the implications of the MPI  
15 application, in terms of driver safety rating. And  
16 we're sure Ms. Meek and others will -- will go through  
17 that in greater detail.

18                   Before we get into our clients'  
19 critical analysis of the application, it's important  
20 to take a step back and look at where Manitoba Public  
21 Insurance is today. And, in our clients' view, it's  
22 at a cross -- crossroads.

23                   Does it follow the aggressive path --  
24 expenditure path, proposed in this rate application?  
25 Or does it maintain behaviour consistent with what the

1 Public Utilities Board and our clients have encouraged  
2 over the past many decades.

3                   And point -- starting point is just to  
4 think -- think of Manitoba Public Insurance, what is  
5 it? And Mr. Herbelin was quite frank on this point,  
6 we're just this utility providing simple products to  
7 Manitobans; that's our core. Not the MPI 2.0 core,  
8 whatever that means. A simple monopoly providing an  
9 important monopoly service to captive customers.

10 Slide 16.

11                   I've talked ad nauseam about the  
12 statutory monopoly, but that's important, because  
13 Manitoba Public Insurance is immune from the pressures  
14 and demands of the competitive market place. It  
15 doesn't mean it doesn't have its own demands, but when  
16 we look at its approach to information, its ambitious  
17 approach to information technology, when we look at  
18 its ambitious plans in terms of full-time equivalent  
19 growth, this is not a company fighting for market  
20 share. This is not a company trying to fine-tune its  
21 offerings in the private market place, fighting for  
22 every slice of that share.

23                   Its customers have nowhere else to go  
24 and those customers rely upon you. As I said at the  
25 outset, it's our clients' view that Manitobans are

1 very attached to this Crown monopoly.

2                   But what it offers is pretty simple. A  
3 simple product, which has barely changed over fifty  
4 (50) years, except for the personal injury protection  
5 plan. And from a ratepayer's perspective, a simple,  
6 seamless transaction, go in, buy your Basic, 72  
7 percent of you also buy your Extension from Manitoba  
8 Public Insurance. Slide 17, please.

9                   This is a simple monopoly with a simple  
10 service. It's not the Winnipeg Regional Health  
11 Authority or Manitoba Health. It provides auto  
12 insurance, adjudicates claims and, to a modest degree,  
13 invests in road safety, nothing more.

14                   And it's important, when you think of  
15 this simple service by this monopoly, a lot of its  
16 services are performed by others. In recent years,  
17 Manitoba Public Insurance has delegated many of its  
18 simpler estimating tasks to repair shops, through the  
19 physical damage re-engineering project.

20                   We -- we cite, in Footnote 21, some of  
21 the data on the hearing but a lot of the work it used  
22 to do has now been contracted out to -- or delegated  
23 out to repair shops. It has a contractual agreement  
24 and arrangements with body shops, automotive trades,  
25 and medical service providers.

1                   And assuming Project Nova releases 3  
2 and 4 are successful, Manitoba Public Insurance's role  
3 in delivering face-to-face services, either through  
4 brokers or services, will diminish. A simple product,  
5 a non-competitive marketplace and, to a significant  
6 degree, its services are -- are delegated elsewhere.

7                   Slide 18 is an important slide. In  
8 terms of customer satisfaction and staff -- staff  
9 satisfaction, Manitoba Public Insurance is doing  
10 pretty well and pretty well compared to private sector  
11 peers.

12                   Over the last four (4) years, based  
13 upon the Forrester analysis it conducts itself, it has  
14 scored in the good range and, sometimes, on the margin  
15 of excellent, and it outscores the overall home and  
16 auto industry by a significant margin. In terms of  
17 employee engagement, it scores over 80 percent.

18                   A fact our clients believe is  
19 uncontested in this hearing is that Manitoba Public  
20 Insurance, over time, and we see -- saw those data  
21 points pre-COVID, is experiencing a decline in demand.  
22 You see Ms. Low, in the first quote, on slide 19,  
23 talking about how collision frequency continues to be  
24 down from pre-pandemic levels and, if you get to look  
25 at the Oliver Wyman expert re -- report, you will

1 start to see, about three (3) years before COVID,  
2 collision frequency was starting to go -- move down.

3           You see, in the second quote, on that -  
4 - that page, Mr. Herbelin saying they expect a lower  
5 claims frequency on certain aspects of the coverage,  
6 including collision.

7           And you see the -- the Oliver Wyman  
8 perspective that the total number of accidents, we  
9 believe, is pretty convincingly declining.

10           And on slide 20, we put to the Board a  
11 statement by Oliver Wyman, which was not contested by  
12 Manitoba Public Insurance in cross-examination, and it  
13 is an important statement about the future of Manitoba  
14 Public Insurance and that's the observation that  
15 claims frequency is decreasing.

16           A lot of that's to do with improvements  
17 in safety technology, perhaps some road safety, and  
18 it's not just a Manitoba experience. It's an  
19 experience that Oliver Wyman, which does regulatory  
20 actuarial work in nine -- all Canadian provinces,  
21 except for Quebec, is seeing across Canada.

22           There are fewer and fewer claims and  
23 we're not talking about the -- the Nirvana, where  
24 there 's -- there's no accidents on the road at this  
25 point in time but this is a corporation, a simple

1 monopoly, experiencing decline in demand, like  
2 property and casual ins -- auto insurance across  
3 Canada. That begs the question, at slide 21. Open  
4 slide 21.

5                   Is significant expansion of this simple  
6 monopoly justified? In the next twenty (20) or so  
7 slides, our clients are going to talk about  
8 unreasonable and imprudent practices in their  
9 perspective in terms of Manitoba Public Insurance  
10 expenditure control. What we call the broken  
11 guardrail, so cost control.

12                   Our clients are going to talk about the  
13 dramatic rise in Basic operating expenses. They're  
14 going to talk about the significant rise in full-time  
15 equivalents. Despite concerns in benchmarking reports  
16 about Man -- Manitoba Public Insurances relatively  
17 poor perspective performance in that regard.

18                   They're going to talk about inflation  
19 busting growth in corporate normal operation expenses.  
20 If you think of CPI year over year, 8 percent or so,  
21 look at corporate normal operation expenses. I think  
22 it's Exhibit 97. We'll come to it later, 13.56  
23 percent. Year-over-year, '22/'23 to '23/'24.

24                   Throughout this hearing our client has  
25 been seeking to understand how Manitoba Public

1 Insurance manages, controls, and evaluates  
2 expenditures and measures performance.

3 I've been away from this GRA for a  
4 year. I wasn't here last year. When I left this  
5 General Rate Application process, we knew a Manitoba  
6 Public Insurance that budgets. We knew how they  
7 managed performance.

8 You couldn't walk or go through five  
9 (5) pages of transcript without seeing key performance  
10 indicators. You couldn't look through the application  
11 without having an active sense of how they were  
12 managing their expenditures.

13 Manitoba Public Insurance has struggled  
14 to explain what is driving significant budget growth  
15 and how it's even evaluating significant driver budget  
16 growth. Is it MPI 2.0? Is it KPIs, or Key  
17 Performance Indic -- Indicators?

18 Ultimately, in Exhibit 86, page 3,  
19 Manitoba Public Insurance admits that it is MPI 2000 -  
20 - 2.0, which is guiding budget decisions. We call it  
21 the ephemeral MPI 2.0, because we don't get it.

22 Mr. Herbelin in day 1 of the hearing  
23 couldn't explain it. We've never heard anyone from  
24 Manitoba Public Insurance explain this except for as  
25 an aspiration, as an ambition. How is that driving

1 budgeting decisions?

2                   You'll hear our clients talk a lot  
3 about Exhibit 86. It's a monster. It is three  
4 hundred and twenty-five (325) pages. It's a response  
5 to Undertaking 10. Our clients asked, what is guiding  
6 your decisions? Give us what it is.

7                   It took Manitoba Public Insurance two  
8 (2) weeks to prepare that exhibit, three hundred and  
9 twenty-five (325) pages. And in terms of key  
10 performance indicators, MPI will admit that they're  
11 not demonstrated to be used there with regard to  
12 Basic.

13                   Of those three hundred and twenty-five  
14 (325) pages or so, you will see less than five (5)  
15 slides addressing key performance indicators and they  
16 relate to special risk Extension.

17                   These will be detailed, but that's the  
18 heart of our clients' concern. Slide 22. Next slide,  
19 please.

20                   I am definitely not a poet or a great  
21 writer, so why are we using the guardrail analogy.  
22 It's not our analogy, it's the Manitoba Public  
23 Insurances choice of words. You'll see that in  
24 Exhibit 86, Appendix 1, slide 6.

25                   So, before discussing Exhibit 86, we

1 asked Manitoba Public Insurance can we define  
2 'guardrail'. And we suggested that a guardrail is a  
3 strong fence at the side of a road, middle of  
4 expressway intended to reduce risk.

5 MPI accepted it for the purposes of  
6 that conversation. But when you look at the growth in  
7 full-time equivalents and you look at the growth in  
8 normal operating expenses, you will see that MPI's  
9 application of that definition is at odds with what it  
10 means.

11 In this hearing, guardrails is employed  
12 by MPI certain words of baseline, but we might even  
13 call it a floodgate. And the guardrails for full-time  
14 equivalents and expenses that you would see in MPI  
15 Exhibit 86, Appendix 1, slide 6 have been obliterated.  
16 Slide 24.

17 Slide 24 focusses on the dramatic rise  
18 in Basic operating expenses. And if you think back to  
19 Monday, Manitoba Public Insurance, in its closing  
20 submissions, appeared to be suggesting that our  
21 clients' interest in operating expenses was somehow  
22 disproportionate.

23 There's a reason that our clients and  
24 every rigorous independent regulator in North America  
25 focusses on operating expenses. The PUB has long

1 understood and stated that operating expenditures,  
2 those choices are far more within corporate control  
3 than, for example, claims expenses which to a  
4 significant degree are a function and have a  
5 correlation with claims.

6           Our clients are also focussing on  
7 operating expenses because this is a \$100 million line  
8 of expenditure. And our clients say this is worthy of  
9 that vigilance, especially when it has grown by 38  
10 percent in just the last two (2) years.

11           Our clients worry that the growth from  
12 a \$76 million baseline to over a \$100 million baseline  
13 will turn into a springboard for future growth,  
14 especially, if Manitoba Public Insurance does not  
15 begin to demonstrate improved controls for  
16 expenditures.

17           And our clients are focussing on  
18 operating expenses because there's something strange  
19 going on. The Manitoba Public Insurance forecast for  
20 operating expenses, for Basic operating expenses in  
21 '23/'24, is sharply different from what it told us  
22 they would be just in last year's General Rate  
23 Application.

24           It's sharply different from the -- from  
25 last year's actual operating expense budget, and it's

1 sharply different from the initial '23/'24 GRA  
2 forecast in early July of 2022, growing by some \$11.5  
3 million in just a few months. Something is amiss.  
4 Something is wrong. Slide 26.

5

6

(BRIEF PAUSE)

7

8

DR. BYRON WILLIAMS: These are  
9 excerpts from a conversation that CAC legal counsel  
10 had with Mr. Giesbrecht, but if you want to go to MPI  
11 Exhibit Pro Forma -- 50, Pro -- Pro Forma 1, page 13,  
12 you'll see some of the same information.

13

Forecast Basic operating expenses for  
14 the '23/'24 year were almost 20 percent year over year  
15 compared to the budget for '22/'23 -- a 17.9 percent  
16 increase year over year.

17

If you go back one (1) more year to the  
18 actuals for '21/'22, what is in the budget for '23/'24  
19 represents a growth of 38 percent in two (2) years.  
20 Back in '21/'22, the actuals were 75.9 -- 75 -- 76  
21 million.

22

They are forecasting \$107.5 million in  
23 '23/'24, \$31.5 million higher over the last two (2)  
24 years. Some of this is due to changes in claims  
25 allocation, but what's driving this is full-time

1 equivalent.

2                   In terms of reasonable check --  
3 reasonableness checks in terms of this growth in  
4 operating expenses, one (1) basic reasonable check is:  
5 What did Manitoba Public Insurance say last year, just  
6 a year ago, about what the '23/'24 budget would look  
7 like?

8                   First of all, let's take the '22/'23  
9 year, the year we're currently in. Operating expenses  
10 are forecast to be 13.4 million higher for this  
11 current year than what MPI told you when it was before  
12 you seeking the rate increase, about 17.5 percent  
13 higher than last year's forecast.

14                   And if we turn to the test year, the  
15 '23/'24 year, operating expenses are forecast to be 37  
16 percent higher than what Manitoba Public Insurance was  
17 forecasting in last year's General Rate Application,  
18 \$29 million higher than last year's forecast. And  
19 again, the sources for that at the bottom of slide 26.

20                   Another pretty basic reality check,  
21 reasonableness check, is: What did Manitoba Public  
22 Insurance tell us when it filed the General Rate  
23 Application, allegedly its best estimate of what it  
24 needed for the test year, back in July?

25                   Operating expenses for the '23/'24 year

1 are -- are eleven point five (11.5) -- as updated by  
2 the October 7th update are \$11.5 million higher than  
3 at the time of the GRA filing. We've seen Mr.  
4 Giesbrecht agreeing with our client on that point.

5 Expenditures that are so dramatically  
6 out of line with reasonableness checks, that are so  
7 markedly different in such short time frames, demand  
8 careful and rigorous justification, in our clients'  
9 respectful view.

10 Twinned with our clients' concern with  
11 Basic operating expenses is a significant rise in  
12 full-time equivalent staff. This is self-evident to  
13 all, but leave aside compensation increases. FTEs,  
14 full-time equivalents, as MPI admits, are a key driver  
15 in the growth of operating expenses, as well as  
16 overall corporate expenses.

17 Even before we got the General Rate  
18 Application, and more importantly the October 7th,  
19 2022 budget update, full-time equivalents had been a  
20 long-standing concern with Manitoba Public Insurance.  
21 Full-time equivalents had been rising even during  
22 COVID compared to the pre-COVID numbers.

23 Benchmark data from Gartner Group in  
24 terms of information technology full-time equivalents  
25 has suggested that the numbers for Manitoba Public

1 Insurance are already high compared to its peers. And  
2 benchmark data in terms of compared to other Crown  
3 corporations has all -- has also raised concerns in  
4 terms of MPI full-time equivalents as compared to  
5 other Crowns.

6 Here's an example of FT -- this is for  
7 the '22/'23 year, not the great leap forward in  
8 '23/'24. But already, FTEs were rising from the pre-  
9 COVID baseline despite decreasing claims frequency  
10 both pre and during the pandemic.

11 Here you see that the budget figure for  
12 '22/'23 as compared to pre-COVID years had eighty-four  
13 (84) more full-time equivalent. Next slide, please.

14 Slide 30 talks about IT full-time  
15 equivalents. There was an excellent cross-examination  
16 by Board counsel in terms of the Gartner IT  
17 benchmarking report and making the point that Manitoba  
18 Public Insurance, both with NOVA, but even without  
19 NOVA, has had higher IT spends, higher full-time  
20 equivalents, as well as higher IT maturity than its  
21 peers that are evaluated in the Gartner group. Slide  
22 31, please.

23 The same time type of insight has come  
24 out of Crown benchmarks, again, an excellent cross-  
25 examination by PUB legal counsel. MPI is

1 underperforming its peers on full-time equivalents as  
2 compared to premiums written. And MPI has higher FT -  
3 - full-time equivalent counts as compared to its Crown  
4 peers by multiple metrics.

5 And this is the Crown benchmarking  
6 exercise that MPI undertook. It doesn't reflect the  
7 '22/'23 year or the 14 percent growth in full-time  
8 equivalents for the purposes of the '23/'24 budget.

9

10 (BRIEF PAUSE)

11

12 DR. BYRON WILLIAMS: In '23/'24 and on  
13 day 2 of this Hearing, slide 14, I think it's Exhibit  
14 55, MPI revealed to our clients' knowledge really for  
15 the first time the full extent of the growth in FTEs  
16 captured in its '23/'24 GRA proposal.

17 The total normal operation full-time  
18 equivalent forecast for the '23/'24 year is two  
19 thousand two hundred and sixty-nine (2,269). This is  
20 two hundred and thirty-two (232) more full-time  
21 equivalents than MPI suggested at the time it filed  
22 its General Rate Application.

23 It is two hundred and eighty-three  
24 (283) more full-time equivalents in the '23/'24 budget  
25 versus the '22/'23 budget, year over year, two hundred

1 and eighty-three (283) more FTEs, a 14 percent  
2 increase. And the sources for that are, of course,  
3 set out at the bottom of this slide.

4

5

(BRIEF PAUSE)

6

7 DR. BYRON WILLIAMS: MPI claims that  
8 these two hundred and eighty-three (283) full-time  
9 equivalents equals about \$36 million. And here you'll  
10 see Ms. McCandless, on behalf of the Public Utilities  
11 Board, suggesting that the two hundred and eighty-  
12 three (283) translates into \$36 million from the  
13 '22/'23 budget.

14 The PUB, of course, will want to take a  
15 look at whether it's only 36 million, but that's the  
16 position of Manitoba Public Insurance. It's a lot.  
17 Next slide, please.

18 When we think of that two hundred and  
19 eighty-three (283), our default assumption might be,  
20 well, it's all Project Nova; it's not. MPI has  
21 assisted us to understand this. It's identified  
22 forty-four (44) IT consultants with NOVA.

23 More digging by the Public Utilities  
24 Board on November the 3rd suggests that perhaps sixty-  
25 three (63) of the two hundred and eighty-three (283)

1 FTEs can be ascribed to NOVA. Go back to that slide  
2 for just one (1) second, please.

3 That's in the range of two hundred and  
4 twenty (220) FTEs, full-time equivalents, that are not  
5 NOVA related. There's a lot going on at Manitoba  
6 Public Insurance in terms of full-time equivalent  
7 growth. Slide 35, please.

8 At a higher level, one (1) other  
9 reasonable check -- reasonableness check on the MPI  
10 expenditures for the '23/'24 year are corporate normal  
11 operating expenses. Inflation's a thing. We know  
12 that there's inflation putting a lot of pressure on  
13 everyone, Mr. Herbelin admitted it, on corporations,  
14 on folks just trying to pay the bills, on folks who  
15 can't pay the bills.

16 Exhibit MPI-97 is a great exhibit.  
17 It's a one (1) slide exhibit, and it compares the  
18 growth of normal corporate operation expenses over a  
19 two (2) year period as compared to inflation.

20 What does that exhibit tell us? The  
21 normal corporate operation expenses grew by 44 percent  
22 or 13.56 percent between the '22/'23 budget and the  
23 '23/'24 budget; 5.56 percent higher than the rate of  
24 inflation.

25 Leave aside stretch targets, if the

1 normal corporate operation expenses would have simply  
2 tracked inflation, they would have been \$19 million  
3 lower. It's a great exhibit and -- and very  
4 illustrative of what our clients are trying to convey.

5

6

(BRIEF PAUSE)

7

8 DR. BYRON WILLIAMS: As I indicated  
9 previously, for years it was pretty easy to understand  
10 how Manitoba Public Insurance was making budgeting  
11 decisions. The word 'key performance indicators' is a  
12 measure to evaluate. Its performance was a key tag  
13 word for a number of General Rate Applications.

14 In this Hearing, MPI's explanation of  
15 what is driving significant budget growth has been  
16 inconsistent. In our clients' discussion with Mr.  
17 Herbelin on October 19th, it was very challenging, and  
18 he seemed unwilling or unable to provide clarity on  
19 how MPI develops budgets and measures performance.  
20 Imagine Mr. Graham with those same type of questions.

21 On slide 37, we see Mr. Giesbrecht  
22 trying to suggest it's all about performance metrics.  
23 We asked him, how are you going to measure what  
24 they're achieving? And he suggested that there's all  
25 sorts of different operating metrics. And -- and so,

1 we asked Mr. Giesbrecht, and so there's a document  
2 that will articulate the expectation of value that  
3 will be delivered by this \$36 million investment in  
4 full-time equivalents. That discussion eventually led  
5 to MPI Exhibit 86. Slide 38, please.

6 So, early in the Hearing we can't get a  
7 sense from Mr. Herbelin in terms of how MPI's making  
8 budget decisions. A day later, Mr. Giesbrecht is  
9 suggesting that there are certain metrics.

10 Ultimately, we get Exhibit 86, that  
11 three hundred (300) some page document. And at the  
12 heart of Exhibit 86 slide -- third page here's what it  
13 says.

14 "The five (5) year ambition, MPI  
15 2.0, guided the buildup of the MPI  
16 budget. MPI based its budget  
17 buildups, breaking the guardrails,  
18 on its five (5) year ambitions in  
19 alignment with its corporate goals."

20 And if you dig deeper into those key  
21 documents, for example, appendix 2 which talks about  
22 the budget for the '22/'23 year, here are the guiding  
23 questions: How will the requested new rules -- how  
24 will all those full-time equivalents support the  
25 journey to MPI 2.0? Slide 39, please.

1                   So, what is MPI 2.0? Look back to the  
2 very first day of this Hearing, the noble efforts by  
3 learned PUB counsel to try to get Manitoba Public  
4 Insurance to explain it. They've been struggling  
5 collectively throughout this Hearing to try to  
6 understand or document what it is. It's got to be  
7 important. Apparently, it's guiding budget decisions  
8 and the dramatic buildup in full-time equivalents, so  
9 what is it? Slide 40.

10                   Here's the CEO of Manitoba Public  
11 Insurance on the first day of the Hearings. Make of  
12 this quote what you will.

13                   "But effectively, there are plans  
14 that are for the future that have  
15 not necessarily elaborated just yet.  
16 That the picture -- that depict the  
17 picture of MPI 2.0 in the five  
18 (5)year ambition level."

19                   Here's Mr. Parti, a candid witness,  
20 again in response to a question by a Board member:

21                   "So MPI 2.0, I do not believe is a  
22 document. It's an aspirational  
23 state for MPI. It's about  
24 everything post-NOVA. No, we don't  
25 have an MPI 2.0 document."

1 Slide 41, please. Back to slide 40 for  
2 a second.

3 How can a document that is  
4 aspirational, not necessarily elaborated, about  
5 everything guide a budget with any rigour? Slide 41.

6 We'll come back to Exhibit 86 in a  
7 second. But our clients make the general observation  
8 that there's little evidence in the budgeting  
9 documents provided by Manitoba Public Insurance to  
10 suggest that, in terms of normal operational expenses,  
11 key -- that key performance indicators, balance  
12 scorecards, or any other good management practices are  
13 being used to evaluate proposed expenditures and  
14 measure outcomes. Slide 42.

15 Where are the key performance  
16 indicators? Our clients has been on this journey  
17 throughout this Hearing. We sought to understand and  
18 to identify performance measures and targets,  
19 including for IT, the process about how they're set  
20 and developed, and how they're measured and adjusted  
21 to.

22 We did so because, for years, MPI  
23 expenditure decisions were driven by a rigorous and  
24 measured approach to KPIs. It was very frustrating  
25 when you're trying to cross-examine them in hearings

1 years past because it was very vigorous. Not so much  
2 this year. Slide 43.

3                   What do we know, leaving aside Exhibit  
4 86? We know that MPI does not have a target for  
5 benchmarking performances on full-time equivalents per  
6 gross premium written. We know that when MPI has to  
7 do its report to the Minister, full-time equivalents  
8 are not a key -- key performance indicator for that  
9 Minister reporting. And Manitoba Public Insurance  
10 tells us that the KPIs are alleged -- or tells us that  
11 they're scattered throughout the application.

12                   Exhibit 86 is intimidating but it's  
13 important. We had asked Manitoba Public Insurance, by  
14 way of undertaking, to the extent that their  
15 expectations are indicated, that it expected to guide  
16 -- the budget deliberations for '22/'23 and '23/'24 to  
17 guide them.

18                   Manitoba Public Insurance spent two (2)  
19 weeks responding to the undertaking. It provided a  
20 lot of paper. The KPIs were merely impossible to  
21 identify. Less than five (5) of the three-hundred-  
22 and-twenty-five (325) slides were attempting to apply  
23 them and that was in the context of special risk  
24 Extension, a competitive line of business.

25                   As Mr. Giesbrecht candidly explained,

1 talking about the special risk Extension KPIs, he  
2 said, This is an example of one, but I wouldn't expect  
3 you to see this in Basic.

4 This is a far departure from the  
5 admittedly vigorous approach that MPI took only a few  
6 years ago.

7 In our clients' respectful view, the  
8 dramatic growth in MPI Basic expenses and FTEs in the  
9 '23/'24 budget is not reasonable. It is not prudent.  
10 The so-called guardrails have been obliterated.

11 But the climbing collision claims  
12 frequency, the climbing weekly indemnity claims  
13 frequency, with the reduction in estimating pressures  
14 flowing from physical damage re-engineering, with the  
15 pending delivery of online services, what is wrong  
16 with Manitoba Public Insurance in managing its  
17 businesses that full-time equivalents have to grow by  
18 14 percent?

19 In our clients' respectful submission,  
20 operational cost containment initiatives and measures  
21 have faded from the General Rate Application. And in  
22 our clients' submission, they need to be returned with  
23 increased vigour and determination, organization wide.

24 In terms of this specific area of our  
25 clients' submissions, we have a number of recommended

1 findings for the Public Utilities Board.

2                   In terms of the current benchmarking  
3 practices, it's our view that they are either weak,  
4 i.e., the Crown benchmarking exercise or dated. And  
5 that they need to be strengthened to enable MPI to  
6 attain optimum performance -- optimum performance  
7 across all areas.

8                   In terms of key performance indicators  
9 or analogous measures, our clients recommend that the  
10 Public Utilities Board find that they can be a  
11 critical tool to establish performance measures and  
12 targets, including for IT.

13                   They recommend that the current MPI  
14 KPIs, when they can be found, seem to be focused on  
15 providing material for presentations, but do not  
16 appear to drive organizational performance  
17 improvements.

18                   They also observe and recommend that  
19 MPI should differentiate between lagging and leading  
20 KPIs to drive performance and to add value. Slide 48,  
21 please.

22                   In terms of our clients' recommended  
23 findings in terms of the reasonableness and prudence  
24 of expenditures in this specific area, our clients  
25 recommend that the Public Utilities Board find that

1 the forecast of Basic operating expenses for '23/'24  
2 is unreasonable.

3                   They recommend that the Public  
4 Utilities Board find that the growth in MPI FTEs,  
5 full-time equivalents, between the '22/'23 year and  
6 the '23/'24 year is unreasonable.

7                   They recommend that the Public  
8 Utilities Board find that more reasonable and prudent  
9 management of full-time equivalents and expenses and  
10 the use of stretch targets could achieve savings in  
11 excess of 2 percent in the revenue requirement.

12                   They also recommend that the Public  
13 Utilities Board observe and find that there are --  
14 that there are other budgetary placeholders in the  
15 '23/'24 GRA budget that do not appear to have been  
16 rigorously developed and which can provide  
17 opportunities for prudence, including the \$5 million  
18 placeholder budget and special services for MPI 2.0  
19 and the \$2 million placeholder budget in loss  
20 prevention for pre-determined projects.

21                   Focusing on expenditure control and to  
22 send a prudence signal, our clients recommend that the  
23 current revenue requirement for MPI should be reduced  
24 by between 2 percent and 3 percent in this specific  
25 area. Thank you.

1                   Madam Chair, we're going to turn to  
2 Project Nova. And given the time that our client  
3 spent on Project Nova in the CSI portion, this will be  
4 shorter than it -- it normally would be on this issue.

5                   But I've probably -- I probably have  
6 another twenty (20) minutes, which might -- might be a  
7 good time to get us to just a short break. If that  
8 would ...

9                   THE PANEL CHAIRPERSON:     That's fine.  
10 Thanks, Mr. Williams.

11

12 CONTINUED BY DR. BYRON WILLIAMS:

13                   DR. BYRON WILLIAMS:     Slide 49, we  
14 highlight a really powerful quote by the MPI CEO:

15                             "In terms of Project Nova, we are  
16                             entering the dead zone and we have  
17                             to go through."

18                   We'll come back to that quote a bit  
19 later. But again, we see our argument in the public  
20 record on Project Nova supplementing our core argument  
21 which, unfortunately, is under CSI. And we ask that  
22 they be read and understood together. Slide 50.

23                   In terms of what's on the public  
24 record, in our clients' view, it confirms that  
25 competing corporate priorities continue to place the

1 achievement of Project Nova outcomes in terms of  
2 functionality, costs, and benefit at risk.

3 In their view, turning to the second  
4 bullet, it confirms that senior non-NOVA executives  
5 appear to be late to the table in assuming ownership  
6 of Project Nova. And that Project Nova governance  
7 challenges continue to place the success of the  
8 project at risk.

9 Our clients re-iterate our concern that  
10 the untendered contract to McKinsey of February 2022  
11 was unreasonable. And our clients' observed, based  
12 upon the public record, that the achievement of  
13 current expectations of Project Nova, in terms of  
14 functionality, benefits and net present value  
15 continues to be a high risk.

16 Our clients note that additional cost  
17 pressures on Project Nova may inadvertently arise from  
18 Corporate messaging suggesting that the project must  
19 be completed at all cost.

20 And for further review, at a later GRA,  
21 they suggest that one (1) item for consideration is  
22 the allocation of the costs of Project Nova.

23 I wasn't at last year's General Rate  
24 Application, so it's -- it's -- now, these aren't my  
25 words, but I think it's instructive to go back and

1 look at what the Public Utilities Board said then.  
2 And remember, at this point in time, the Public  
3 Utilities Board was only looking at the 2021 re-  
4 baseline, not the 2022 re-baseline.

5           And again, I wasn't at the hearing, but  
6 apparently there was a discussion of moving from  
7 Project Nova through -- towards MPI 2.0 through Super  
8 Nova. And, in the quote at the top of the page, you  
9 see the Board even on the 2020/'21 re-baseline  
10 expressing concern with budget overruns and expressing  
11 its concern quite pressively that their 2021 re-  
12 baseline may not be a reliable indicator of future  
13 project costs. They're also warning you about scope  
14 creep, given the plan -- plan move towards MPI 2.0  
15 through Super Nova.

16           Again, I wasn't at the hearing, so I  
17 don't know who picked the words 'Super Nova', but I  
18 thought that was a curious choice of words and we went  
19 to the handy Oxford dictionary just to try and  
20 understand a common parlance for Super Nova, which is  
21 a star that suddenly increases greatly in brightness  
22 because of a catastrophic explosion that ejects most  
23 of its mass.

24           And I'm, again, I don't know who called  
25 it Super Nova, I hope that is not an aspirational

1 intention and that Super Nova has a different meaning  
2 than -- than common parlance. Slide 52.

3 In terms of computing Corporate  
4 priorities, our client recommends that the PUB turn  
5 back to our confidential CSI slides 24 to 29. But, we  
6 do note, Mr. Mitra again noting actually in the spring  
7 of 2021, that already MPI was struggling with  
8 competing corporate priorities. Slide 53.

9 What is striking to our client is --  
10 you'll recall in cross-examination on the public  
11 record, there was actually a discussion of two (2)  
12 steering committees. And one involving the sponsors,  
13 the CEO, the -- the COO, the CIO, so the Chief  
14 Operating Officer, the Chief Executive Officer and the  
15 Chief Information Officer.

16 I do take you to one -- Exhibit MPI  
17 106, where we try to find out when this started,  
18 because you'll -- you'll know that with the project  
19 deeply in trouble, as Project Nova has been,  
20 leadership across the Corporation is necessary.  
21 Ownership of the project is necessary.

22 To our surprise, our clients knew that  
23 the sponsor steering committee, including the Chief  
24 Executive Officer, was not announced till June of 2022  
25 and did not meet until well into July of 2022.

1                   And this raises concerns for our  
2 clients, given the dramatic escalation of cost,  
3 decline in benefits in MPV and material challenges  
4 with scheduling, our clients would have expected  
5 senior executive ownership of this project sooner in  
6 the process, including through this sponsor steering  
7 committee.

8                   Slide 54 merely repeats, based upon the  
9 public record, issues related to the significant  
10 untendered contract for McKinsey to serve as general  
11 contractor. With MPI back in February of 2022,  
12 defending this decision, on the grounds that it could  
13 not afford the delay involved with issuing a tender  
14 process. Had -- it had to act then and urgently to  
15 hire a general contractor. It couldn't afford to wait  
16 for tenders. Slide 55.

17                   The public record on this point is  
18 actually better than the confidential record in -- in  
19 our clients' view. It confirms that Manitoba Public  
20 Insurance and the MPI Board technical committee were  
21 aware of concerns that MPI could not fulfill the  
22 general contractor role by the summer of 2021. And in  
23 the case of the technical committee, perhaps early  
24 September. Oh, go -- go back please, thank you, Ms.  
25 Schubert.

1                   It highlights that by mid 2021, MPI was  
2 starting to understand that the complexity and scale  
3 of NOVA was greater than anticipated. It was  
4 recognizing that were -- there were concerns in terms  
5 of the timing and the budget for NOVA.

6                   MPI confirmed that by the summer of  
7 2021, it was concerned that it was not competent to  
8 fill the entirety of the general contractor's role and  
9 that the technical committee of the Manitoba Public  
10 Insurance Board was advised that -- Manitoba Public  
11 Insurance was struggling in its role as general  
12 contractor in the August to September 2021 time  
13 period. And you'll see that's part -- from the  
14 transcript October 31st of 2022.

15                   MPI confirmed its awareness, or at  
16 least its -- its tendering folks' awareness of the  
17 opportunities for accelerated tenders but as Mr.  
18 Mitra candidly admitted, subject to check, Manitoba  
19 Public Insurance did not evaluate that option. Next  
20 slide please.

21                   At slide 57 we merely highlight, that  
22 apart from McKinsey, and let's leave aside KPMG and  
23 other potential vendors, there are also other -- other  
24 elite firms in -- in -- potential in the marketplace  
25 who could have participated in the tendering process,

1 especially if it would have been initiated in the fall  
2 of 2021. Slide 58.

3           Again, because so much of this  
4 documentation is on the CSI record, at slide 58, our  
5 clients just want to highlight that the achievement of  
6 current expectations for NOVA continues to be high  
7 risk.

8           Among the key risk factors are the  
9 complexity of the -- release 3, compared to releases 1  
10 and 2. Uncertainty in broker negotiations. The fact  
11 that pre-discovery and discovery have not yet been  
12 done for the largest release being release 3. And,  
13 obviously, there is a risk of further schedule  
14 slippage that would impact costs.

15           So, for our clients' view, this -- this  
16 highlights the risks associated with relying too  
17 heavily on re-baseline 2022. Slide 59 please.

18           PUB counsel did some nice work in just  
19 kind of tracing the changes in -- in corporate and  
20 Board expectations for Project Nova.

21           As late as December 2020, the tech  
22 committee was only prove -- prepared to prove budget  
23 increases up to zero (0) MPV. Of course, now we're at  
24 minus one hundred and eighty nine million (-189).  
25 Slide 60.

1 Slide 60 is a candid discussion between  
2 Chairperson Gabor and Mr. Herbelin and the question  
3 was put, you're in deep and perhaps I'd -- I'll just -  
4 - just let me say, the question was put, There isn't  
5 pulling back from this. And Mr. Herbelin go -- goes:

6 "If you take the analogy of the  
7 summit, we're entering the dead zone  
8 and we have to go through."

9 Our client is somewhat concerned that  
10 this type of messaging may be like a moth to a  
11 consultant's flame and, certainly, from our clients'  
12 perspective, it reinforces the nay -- necessity of  
13 independent governance, oversight, and rigorous PUB  
14 review.

15 Even if Manitoba Public Insurance is no  
16 longer budgeti -- or governing this project with  
17 guidance, in terms of aiming for zero MPV, it is very  
18 critical for independent oversight, in our clients'  
19 view, to bring as much rigour as possible to the -- to  
20 expenditure control.

21 The Corporation, in our clients' view,  
22 appears to be vulnerable and deep into the project and  
23 -- and our clients are concerned that that may trigger  
24 further pressures on expenditures.

25 Slide 61. Next slide, please. Just a

1 simple acknowledgment on slide 61 that this is a high  
2 risk project. It continues to be a high risk project  
3 and we appreciate Mr. Mitra's candour. Slide 62.

4           On slide 62, we just raise some  
5 comments on -- on cost allocation and as the Public  
6 Utilities Board is aware, the cost allocation  
7 methodology for Project Nova has changed, with less  
8 being allocated to Basic, and you would think our  
9 clients would be celebrating, and our clients  
10 certainly will be celebrating if -- if -- if that is a  
11 valid cost allocation methodology.

12           Our clients do not want to pay one cent  
13 more than they need to pay but they do not want to pay  
14 one cent less than what is just and reasonable.  
15 That's what this process is about.

16           And, so, our client is just being  
17 mindful of cost allocation because the changes to the  
18 cost allocation methodology have not been explored --  
19 externally val -- validated, and their timing happened  
20 to be very contemporaneous with -- with re-baseline  
21 2022.

22           Our clients will applaud with joy if  
23 the cost allocation methodology related to Project  
24 Nova is validated by external method -- methodology  
25 but it -- they -- they suggest that it should be

1 looked at with some care, in future regulatory  
2 proceedings. Slide 63, please. That basically reiter  
3 -- reiterates what I just said on slide 62. So, we  
4 can move on, please.

5           In terms of our clients' recommended  
6 finding, again, these should be read in -- in -- in  
7 harmony with the CSI submissions but, again, that  
8 Project Nova is a high-risk pro -- project, by virtue  
9 of its complexity, financial challenges, and timing  
10 challenges; and it's ability to make critical dead --  
11 deadlines has been put at risk by competing corporate  
12 pressures; and its capacity to make critical deadlines  
13 has been put at risk by challenges in engaging senior,  
14 non-NOVA executives; that the MPI Tech Committee was  
15 aware of concerns that MPI could not fulfil the  
16 general contractor role by the summer of 2021 and that  
17 it was imprudent -- that MPI was aware but did not  
18 explore an accelerated tendering process; and that it  
19 was imprudent to issue an untendered contract for  
20 McKinsey in February '22.

21           We also recommend the finding that  
22 there is uncertainty that the project can be delivered  
23 on existing re-baseline budget, time line, and net  
24 present value -- negative net present value.

25           In our clients' view, without

1 commenting on material on the confidential record, the  
2 Public Utilities Board has benefitted greatly from the  
3 insights of the independent governance advisor PwC,  
4 and, if Manitoba Public Insurance continues to retain  
5 an independence governance advisor, our clients would  
6 recommend that that -- Public Utilities Board should  
7 ask that entity to appear as a witness at the next  
8 General Rate Application.

9           If an independence governance advisor  
10 is not retained, given the magnitude of the project,  
11 given the risk of the project, in our clients' view,  
12 the PUB should request an independent assessment of  
13 the risks in business case for NOVA for the next GRA.

14           Bullet 3, it's not the PUB decision but  
15 we are proposing that the PUB should recommend to the  
16 MPI Board that it directs MPI to contain costs within  
17 the 2022 re-baseline.

18           It's important from our clients' view,  
19 especially given other competing priorities,  
20 especially given the risk of project scope -- scope,  
21 that a line be drawn in the sand somewhere and,  
22 perhaps, the last line that can be drawn is the 2022  
23 re-baseline and -- which may require hard decisions.  
24 It may not achieve the aspirations of Super NOVA but  
25 it would be helpful guidance to Manitoba Public

1 Insurance, given its struggles with this project.

2                   And, again, our clients recommend that  
3 the PUB should defer determination of cost allocation  
4 -- an ultimate determination, and request independent  
5 review, at some future date. Slide 66.

6                   I'm not going to go through this in  
7 detail but, if the Board is looking for precedent or  
8 examples of where it has undertaken similar activities  
9 in the past, it can look to what it did with the  
10 physical damage re-engineering project. That was only  
11 "a sixty-five million dollar (\$65,000,000) project"  
12 but, again, it was badly out of scope and over budget.

13                   And, certainly, these two (2) slides,  
14 being slides 66 and 67, we recommend for the Board to  
15 read at your leisure -- I'm sure you have so much of  
16 it -- because it does give a good history of Manitoba  
17 Public Insurance's aggressive adventures, prior to  
18 Project Nova, in modernizing its IT footprint. Go  
19 back to slide 66.

20                   In that second paragraph, you can just  
21 see all the projects that it was involved with prior  
22 to physical damage re-engineering. It's not like  
23 Manitoba Public Insurance has been sleeping in the  
24 backwoods for -- for a decade. There's been an  
25 aggressive effort, pre-NOVA, to enhance its maturity

1 and that maturity is reflected in the Gartner Group  
2 Peer benchmarks showing it with a relatively high  
3 maturity compared to its peers across nine (9)  
4 different arc -- categories.

5 Slide 67, again, is just an example of  
6 what the PUB did with the physical damage re-  
7 engineering project and the recommendations that our  
8 client is making in -- in this hearing are highly  
9 analogous to what the Public Utilities Board did in  
10 Order 128/'15.

11 Slide 68 takes -- takes us to  
12 investments and, Madam Chair, I'm a couple of minutes  
13 ahead of schedule but this is -- recognizing I've  
14 still got a ways to go, this might be a good break  
15 point for -- for a health break.

16 THE PANEL CHAIRPERSON: Thank you, Mr.  
17 Williams. Yes. Let's come back, please at twenty-  
18 five to 11:00.

19

20 --- Upon recessing at 10:19 a.m.

21 --- Upon resuming at 10:36 a.m.

22

23 THE PANEL CHAIRPERSON: Thank you.

24 Mr. Williams...?

25

1 CONTINUED BY DR. BYRON WILLIAMS:

2 DR. BYRON WILLIAMS: Thank you. When  
3 we look at investments, it's -- it's important to  
4 understand that there's -- there's two (2) confro --  
5 conversations. One (1) is the policy decisions by  
6 Manitoba Public Insurance in terms of its investment  
7 portfolio Basic and for Rate Stabilization Reserve  
8 that are affecting us today and that will be affecting  
9 us next year, and that relates to the 2018  
10 Asset/Liability Matching Study and the 2018 policy.

11 And then there are the choices Manitoba  
12 Public Insurance will make at its Investment Committee  
13 meeting and -- and implement over the next year, so  
14 that's the forward-looking.

15 So, when -- when we're having this  
16 discussion, I'm going to start by focussing on the --  
17 on the existing policy, the 2018 policy.

18 And slide 68, at a high level, outlines  
19 our clients' submissions, that today's ratepayers and  
20 -- and next year's ratepayers are -- are being  
21 impacted by investment policy choices made by Manitoba  
22 Public Insurance in 2018 that were high risk choices  
23 that were further impaired by low return constraints.

24 And I have the utmost admiration for My  
25 Learned Friend, Mr. Scarfone, counsel for Manitoba

1 Public Insurance and after our -- our client completed  
2 its cross on the investment portfolio, I remember a  
3 question he asked Mr. Bunston. You know, could anyone  
4 predict where inflation was four (4) years ago?  
5 That's not the issue. It's not about who can predict  
6 inflation better. At risk and at issue is the  
7 reasonableness and prudence of high-risk choices and  
8 low return of constraints adopted by Manitoba Public  
9 Insurance in terms of a -- it -- of its existing  
10 investment policy. And ratepayers are currently  
11 paying a price in terms of unreasonable risk and in  
12 terms of constrained returns.

13                   Bullet 4 on this slide notes that while  
14 some of these high-risk choices reflected in the  
15 existing investment policy appear likely to be  
16 eliminated in the next policy, MPI continues to impose  
17 certain constraints that undermine Basic portfolio  
18 optimization.

19                   And My Friend, Learned counsel for  
20 CMMG, will also be sharing her client's perspective on  
21 this important issue. The last bullet on this page is  
22 a bit more of a forward-looking thing.

23                   And -- and they're still working on the  
24 -- our way through to make sure we understand the MCT  
25 calculation as it rela -- relates to financial risk,

1 but our client does have a preliminary concern that  
2 the mechanistic MCT calculation may be determining  
3 portfolio optimization and we'll -- we'll explain that  
4 rather arcane subject in -- in a few slides.

5           At slide 69, let's start with what  
6 should be a parenthod statement. Inflation's a  
7 thing. Of all the MPI lines of business, Basic  
8 insurance has the greatest exposure to inflation risk.

9           And Mr. Bunston can confirmed that in  
10 conversation with myself. And MPI's Chief Executive  
11 Officer talked about inflation impacting all aspects  
12 of the Corporation: operating expenses, wages,  
13 physical damage claims. But more unfortunately,  
14 inflation really has an impact on those personal  
15 injury pot -- protection pan -- plan benefits that are  
16 subject to indexation.

17           And in response to a very inelegant  
18 question by myself, Mr. Bunston provided really  
19 helpful elaboration on this and described the  
20 significant amount of long-term liabilities of  
21 Manitoba Public Insurance impacted by inflation.

22           Those claims that may last ten (10)  
23 years, twenty (20) years, thirty (30) years, and that  
24 are indexed. There's a typo on this page and we'll  
25 correct that because it's not just 3 percent that are

1 directly indexed to -- to Manitoba CPI, that should  
2 read 83 percent.

3                   And the remaining 16 percent not  
4 directly tied to increases in CPI, but impacted by  
5 increases in healthcare inflation, which is different  
6 but often higher than CPI. Mr. Bunston's point here  
7 is that long-term liabilities are highly exposed to  
8 inflation risk. Slide 70.

9                   So, this goes back to the 2018 policy  
10 decision. And when you're doing asset/liability  
11 matching, and there are people in this room who are  
12 far more insightful in this point than I am, the  
13 starting point isn't to look at the assets, it's to  
14 look at your liabilities.

15                   What are the risks inherent in your  
16 liabilities? And that's we call that critical first  
17 step, the benchmark liability (INDISCERNIBLE). And  
18 Mr. Bunston, as always, is a candid and thoughtful  
19 witness and he flagged that the first step is to model  
20 the liabilities and develop an asset mix that responds  
21 to the risks and manages the risks associated with  
22 those liabilities.

23                   And candidly, again, he confirmed that  
24 the liability benchmark should reflect the  
25 characteristics of those underlying liabilities, esp -

1 - especially in the case of liabilities that are long  
2 in duration and inf -- inflation sensitive. Slide 71,  
3 please.

4                   So, Manitoba Public Insurance had a  
5 choice back in 2018. In determining its 2018 policy,  
6 it could have looked at a liability benchmark and  
7 Mercers presented one that focussed on both interest  
8 rate risk and inflation sens -- sensitivities. That's  
9 what we call a real liability benchmark, or sometimes  
10 a real interest liability benchmark.

11                   Or he could have just focussed on  
12 interest rate sensitivity, sometimes known as a  
13 nominal liability benchmark. Mercers did both models  
14 for MPI and Manitoba Public Insurance chose to model a  
15 nominal liability portfolio, i.e., just focussing on  
16 interest rate sensitivity rather than one reflective  
17 of real interest rate risk, i.e., after inflation.

18                   And as Mr. Viola has pointed out, and  
19 as our client has pointed out, for the better part of  
20 a half decade, that's an extremely risky choice,  
21 because the nominal liability portfolio selected by  
22 MPI did not appropriately match the risk of Basic  
23 liabilities, including their vulnerability to long-  
24 term inflation.

25                   It's not a predictive exercise. It is

1 good risk prevention 101. Match liability benchmark  
2 to the real risks venture liabilities face. Slide 72,  
3 please.

4                   And that liability benchmark is such a  
5 critical exercise because the choice of whether you go  
6 with a nominal liability benchmark or a real liability  
7 benchmark is critical to the decisions that the  
8 computer optimizations make -- the opt -- the  
9 optimizers make.

10                   And on slide 72, you see me discussing  
11 with Mr. Bunston -- again, always a fair and candid  
12 witness -- confirming that when you're starting to  
13 move from the liability benchmark to the actual  
14 selection of assets along an Efficient Frontier,  
15 everything flows on whether -- what benchmark is  
16 selected. Mr. Bunston agreed that's fair.

17                   So the choice of a nominal-liability  
18 benchmark would lead to different optimization choices  
19 than the choice of a real liability benchmark.

20                   So if you're sitting here today or if  
21 you were sitting here last year wondering why there  
22 were no real-return bonds in the MPI Basic portfolio  
23 which provide a full hedge against inflation, or why  
24 there was no real estate which provides a partial  
25 hedge against inflation, the core policy choice way

1 back in 2018 to -- to develop a nominal liability  
2 benchmark rather than a real liability benchmark is  
3 what has left Manitoba Public Insurance so exposed in  
4 the face of high inflation; not because Mr. Viola on  
5 behalf of CAC had a crystal ball, but because Mr.  
6 Viola, based upon his vast experience whether with  
7 Ontario Teachers or CPP, knows what good practice is.  
8 The starting point is: Evaluate your risk inherent in  
9 your liabilities and acknowledging that inflation is a  
10 risk -- not that we're predicting it, but it's a risk  
11 that is -- that Manitoba Public Insurance, especially  
12 under the Personal Injury Protection Plan, is acutely  
13 vulnerable to.

14                   This fundamental design flaw, this  
15 choice of Manitoba Public Insurance, exposed it to  
16 undue risk. Slide 74.

17                   And we're not ascribing all of this  
18 loss in marketable bonds to -- to that choice, but --  
19 but MPI definitely had a tough year in '21/'22 in its  
20 investment portfolio. And none of those bonds had  
21 inflation protection. Slide 75.

22

23                   (BRIEF PAUSE)

24

25                   DR. BYRON WILLIAMS:    There are two (2)

1 things happening here that we're trying to get at on  
2 slide 75. One (1) was the selection of the nominal  
3 liability portfolio that led to an optimization  
4 process that excluded real-return bonds, it excluded  
5 real estate. So that's a design flaw, if you will.

6           There is also a policy choice that  
7 Manitoba Public Insurance made to constrain the Basic  
8 investment portfolio: all bonds, no equities.  
9 Regardless of the diversification value, for example,  
10 a portfolio with real-return bonds and investment  
11 portfolios and still focus on bonds, regardless of  
12 that diversification potential made a policy choice to  
13 constrain equities.

14           And the Mercer Report in this year's  
15 Application had a really interesting portfolio,  
16 Portfolio D. Portfolio D was a more unconstrained  
17 portfolio, including equities, but also including  
18 inflation protection, and with no more risk, according  
19 to Mercer's, than Portfolio A, Manitoba Public  
20 Insurance's 2018 policy portfolio.

21           And bullet 3 just does the math that we  
22 did during cross-examination with Mr. Bunston, just  
23 looking at one year, and showing that in the current  
24 year, the impact of these choices might be as much as  
25 \$25 million. And that was com -- comparing Portfolio

1 D of a similar risk to the Manitoba Public Insurance  
2 portfolio, but with a higher return because it was --  
3 it was not unduly constrained and it was using the  
4 principles of correlation and diversification.

5           And so when our clients suggest that  
6 the 2018 policy accepted undue risk but also denied  
7 MPI ratepayers important opportunities, that's what  
8 they're referring to, the double whammy: the -- the  
9 design flaw to pick the nominal benchmark and the  
10 policy choice to constrain the optimization process.

11           That analysis is a snapshot in time,  
12 but we're trying to convey through that analysis both  
13 the risks and the opportunities.

14           To its credit, Manitoba Public  
15 Insurance, Mr. Herbelin and -- and certainly Mr.  
16 Bunston, now acknowledge the importance of real  
17 inflation risk.

18           And here you'll see Mr. Herbelin  
19 recognizing the importance of designing your  
20 importment -- your investment portfolio to be alive to  
21 the real risks of inflation, and the 2022 asset  
22 liabilities management study of Mercer's does use a  
23 real liability benchmark.

24           Going forward, they're going to correct  
25 the design flaw that has left Manitoba Public

1 Insurance unduly exposed to inflation risk.

2                   And our clients do want to note on  
3 slide 77, again, we don't know the ultimate policy,  
4 but the twenty (20) -- MPI seems to be making some  
5 improvements as compared to the 2018 policy.

6                   It appears to have accepted the -- the  
7 need to better manage the benchmark liability  
8 portfolio to its actual risk, i.e., interest and  
9 inflation, not just interest rates. That would lead  
10 to optimizations based upon real after-inflation  
11 interest rates and it appears the inclusion of real-  
12 return bonds.

13                   MPI has also eliminated the constraint  
14 that the portfolio should be 100 percent bonds, and  
15 with better optimization due to the elimination of  
16 this inefficient constraint, again, recognizing that  
17 this is a future-looking exercise, MPI appears to have  
18 accepted lower risk with the opportunity for somewhat  
19 higher returns.

20                   So as compared to what our clients  
21 would consider to be the high-risk, low-opportunity  
22 2018 decision, there have been some improvements.  
23 Slide 78.

24                   And as Ms. Meeks (sic) will no doubt  
25 express far more eloquently than I, it appears that

1 inefficient constraints will continue to remain in the  
2 going-forward MPI portfolio. Our understanding is  
3 that the recommendation to the MPI board will be that  
4 it continue to adopt the inefficient constraint of no  
5 equities, no levered bonds.

6           And our clients think this does a  
7 disservice to ratepayers and is unfortunate because  
8 Mercer's 2022 analysis demonstrates an opportunity for  
9 MPI to achieve higher returns at comparable or lower  
10 risks to its current portfolio, including by  
11 diversifying its portfolio to include equities,  
12 alternatives or levered bonds.

13           And if you think of that cross-  
14 examination that we did with Mercer's and with MPI and  
15 the Efficient Frontier grid, down here on the right  
16 and fairly low down was MPI's current portfolio, and  
17 above it and much higher was Portfolio D: equivalent  
18 risk and -- as measured by Mercer's but significantly  
19 greater return. And again, My Friend Ms. Meeks will I  
20 expect be speaking to that. Slide 79.

21           In our clients' view, MPI doesn't like  
22 this peer review, but there's a really helpful peer  
23 review on the record that looks at how MPI has  
24 performed in terms of its investment portfolio  
25 compared to the investment gross returns of certain

1 other entities: ICBC, Saskatchewan Government  
2 Insurance, Worker's Comp, Civil Service Superannuation  
3 Board, and Teachers.

4 The analysis came to a couple  
5 conclusions about midway in the -- the page, this  
6 won't shock anyone. Over this four (4) period for the  
7 asset mixes with higher allocations to fixed income,  
8 generally, on average, they had a lower return.

9 And it compared the performance over  
10 this snapshot in time, being a four (4) year period,  
11 of MPI to six (6) peers. It noted that, of the -- the  
12 six (6) companies, Manitoba Public Insurance had the  
13 largest allocation towards fixed income and that all  
14 but ICBC outperformed MPI.

15 On the record, there's another --  
16 additional information which brings the comparison  
17 with SGI up to fiscal '21/'22. And in that particular  
18 year, the MPI investment portfolio underperformed SGI  
19 by 2.9 percent.

20 Just to stay on this slide for one (1)  
21 more page. Again, our clients' point isn't just about  
22 return. Our clients' point is about the relationship  
23 between rate and return. We're highlighting that the  
24 2018 policy made -- had design flaws and policy  
25 choices that prejudice Manitoba ratepayers both on

1 risk and in terms of opportunities.

2                   And while there have been -- it appears  
3 that there's been some progress on the risk side, from  
4 our clients' perspective, there continue to be  
5 inefficient constraints imposed by the MPI Board on  
6 the investment portfolio which -- which deny it the  
7 optimizing benefit of portfolio diversification and --  
8 and significant opportunities, especially for classes,  
9 all ratepayers, but especially classes who experience  
10 a disproportionate share of costs associated with the  
11 Personal Injury Protection Plan.

12

13   (BRIEF PAUSE)

14

15                   DR. BYRON WILLIAMS: Slides 80 and 81,  
16 you'll hear a bit of caution in my voice because we're  
17 still trying work our way through this. But one (1)  
18 really interesting thing flowing from the Mercer  
19 analysis, Mercer focussed on risk in the marketplace.  
20 They're comparing different types of portfolios based  
21 upon surplus volatility.

22                   And what we're trying to get at at  
23 slide 80 is two (2) portfolios, portfolio A, which is  
24 the MPI portfolio, and portfolio C, which was a less  
25 constrained portfolio and had significantly less risk

1 as measured against MPI's approach. And so, that's  
2 Mercer's approach, focussing on -- on the middle of  
3 the bell curve.

4                   But what was puzzling to us in the  
5 initial Mercer's analysis was you took portfolio C,  
6 which in the marketplace had significantly less risk,  
7 and then you plugged it into the minimum capital test  
8 financial risk calculation, and it's showing up with  
9 an additional minimum capital requirement of 65.4  
10 million as compared to the MPI portfolio of 16.8  
11 million.

12                   So, we -- we had an undertaking. And  
13 we -- we got the -- the mechanics by which Manitoba  
14 Public Insurance undertook this calculation.  
15 Obviously, they just applied the mechanics of the MCT  
16 analysis.

17                   And if you'll recall that conversation,  
18 and I'll take you to a reference point in just a  
19 second, in that conversation, we confirmed that, in  
20 terms of investment risk factors, government bonds,  
21 whether they were T-Bills or provincial bonds or -- or  
22 provincial -- or Canada bonds, had no risk factor  
23 attached to them in terms of this metric whereas  
24 equities had 30 or 40 percent. And that was puzzling  
25 to us because it didn't seem to account portfolio

1 diversification.

2                   Slide 81 we put to Mr. Bunston an  
3 extreme scenario, a basic portfolio with a hundred  
4 percent T-Bills. So short -- a gross duration  
5 mismatch with the actual characteristics of the MPI  
6 portfolio. And he confirmed that the risk wouldn't  
7 change based upon that weight. And so, we intend to  
8 explore this going forward as we get greater  
9 understanding of the potential limits of the MCT  
10 calculation.

11                   But going back to slide 80, our client  
12 is concerned that legitimate investment decisions  
13 based upon market measures which might better  
14 optimized the portfolio might be deterred by the  
15 mechanics, the rigid mechanics of the MCT calculation.

16                   Again, we have to be careful now  
17 because we're still learning about it, but that is the  
18 concern.

19                   And on slide 82, this will no doubt  
20 suck out your attention span, and so we're just trying  
21 to confirm that the MCT is really a balance sheet  
22 exercise. It's not a market exercise like the -- the  
23 Mercer's calculation.

24                   And you'll see the question made, this  
25 -- the last question:

1                    "In essence, actual capital is  
2                    measured using accounting  
3                    standards."

4                    If we can go to slide 83, hopefully, I  
5 can pull this together. These were our clients'  
6 recommendations in terms of the MPI investment  
7 portfolio. There's a few recommendations that our  
8 clients have been making since about 2017 or 2018 that  
9 we reiterate.

10                    From our clients' perspective and in  
11 their -- from their perspective, Manitoba consumers  
12 and ratepayers are better served if the portfolio is  
13 managed in terms of long-term sustainability. The  
14 term in surplus risk as measured by -- by Mercers, for  
15 example, not short-term earnings volatility, that  
16 accounting sheet versus market realities that -- that  
17 sometimes occurs with -- with all apologies to the  
18 accountants.

19                    In terms of constraints, our clients  
20 continue to recommend that constraints should be  
21 reviewed and relaxed to the degree possible and  
22 prudent to avoid lower risk adjusted returns.  
23 Constraints never increase expected risk adjusted  
24 returns.

25                    And if constraints are going to be

1 imposed upon the portfolio, there should be an  
2 explanation and supporting evidentiary analysis. They  
3 shouldn't be concerns -- driven by concerns about a  
4 newspaper headline, for example.

5           Based upon our clients' review of this  
6 proceeding, we'll make a number of new  
7 recommendations. Like our friends, I suspect, from  
8 CMMG, our clients recommend that Manitoba Public  
9 Insurance remove the no equities constraint and Basic  
10 portfolio optimizations given the cost of this  
11 constraint. And, again, that was expressed by that  
12 comparison between portfolio D and portfolio A. In  
13 essence, you get lower returns for the same risk.

14           Not remove, but relax, the no leverage  
15 constraint as the asset liability match and study  
16 support its use and explore ways to manage any  
17 additional risks associated with the prudent use of  
18 leverage, i.e., counter-party risk and liquidity risk.

19           Slide 85. Remove or relax other costly  
20 constraints where a cost is measured as the foregone  
21 returns. MPI's tolerance for surplus risk.

22           Be more transparent regarding the  
23 rationale for imposing various constraints and  
24 ensuring that they're supported by appropriate  
25 evidence, empirical research.

1                   Continue to evolve in -- in the  
2 understanding of other portfolio risks, such as  
3 liquidity and counter-party risk. At a high level, it  
4 appears that MPI's justification for imposing certain  
5 constraints, such as no leverage, relates to these  
6 other types of risk, but our clients have not seen any  
7 evidence related to the materiality of those risks in  
8 terms of adverse impact in the probability of  
9 occurrence or the compensating cost of managing these  
10 risks at a -- at acceptable levels. Slide 87.

11                   Adopt a decision making process that is  
12 based primarily on economic considerations, market  
13 values, and cash flows, rather than accounting ones.

14                   And there's some important commentary  
15 here, both about IFRS 17 and the pension plan, that  
16 I'll leave to the -- for the Board to read and enjoy  
17 at its leisure. Slide 88.

18                   Again, this perhaps imagined a world  
19 without BITSA, but adopt risk metrics and  
20 methodologies for capital reserve management that are  
21 more consistent with the metrics and methodologies  
22 used in the asset liabilities studies.

23                   And importantly -- and again,  
24 consistent we believe with our friends from CMMG --  
25 conduct MPI's own risk and solvency assessment, ORSA,

1 and consider ways to look at the capital RSR targets  
2 without undue reliance on regulatory capital measures,  
3 such as the MCT.

4 In a way and in essence -- again,  
5 recognizing the constraints of BITSA -- going back to  
6 what we had very successfully in Manitoba for a number  
7 of years with the collective approach to Dynamic  
8 Capital Adequacy Testing informed by contributions by  
9 the PUB, by Interveners, and by MPI.

10 Before I turn things over -- no doubt  
11 to your relief -- to Mr. Klassen, I want to go to  
12 claims frequency. And sorry, it's -- the title for  
13 this should be modernizing claims incurred.

14 But this specific slide, being slide  
15 89, we're now moving to the claims incurred  
16 forecasting section of our submission.

17 And we wanted to start with a -- what  
18 we think was an important admission and comment by Ms.  
19 Low on behalf of Manitoba Public Insurance.

20 And in this conversation, which took  
21 place on October 21st, I was drawing to her attention  
22 some revisions to the weekly incurred ultimate  
23 assessment. And suggesting to her that what that was  
24 telling us was with regard to certain of the PIPP  
25 perils or lines of business, MPI was employing

1 assumptions that were too conservative.

2                   And as is her right and Ms. Low  
3 candidly agreed. And then, she went on to say, But  
4 these were long-term claims. There's a lot of  
5 uncertainty. The more mature the block of claims get,  
6 the less uncertainty there is.

7                   So you're always building a little  
8 ounce of conservatism because we don't know how the  
9 claims are going to play out.

10                   In our clients' view, that little ounce  
11 of conservatism is a pretty important statement. And  
12 we ask whether in building in a little ounce of  
13 conservative -- conservatism -- not trying to take any  
14 political positions -- I mean, conservatism in terms  
15 of actuarial analysis is consistent with the  
16 obligation to provide a best estimate and one that is  
17 without bias.

18                   And so, this little ounce of  
19 conservatism, in our clients' view, helps you to  
20 understand where Oliver Wyman was coming from when  
21 they made their ultimate conclusions.

22                   Back to slide to 89 for -- for a  
23 minute. The duty of actuaries, certainly as our  
24 client understands it and -- and -- is to provide a  
25 best estimate and one without bias. And part of the

1 tension between the position of Manitoba Public  
2 Insurance and the evidence -- the independent evidence  
3 of Oliver Wyman may revolve about this -- around this  
4 little ounce of conservatism. Slide 90, please.

5 Other important and candid admissions  
6 by Manitoba Public Insurance during cross-examination  
7 is that they use a linear trend for weekly indemnity  
8 frequency and assume that frequency decreased at a  
9 rate that is constant in amount. And -- and we know,  
10 based upon our experience in the real world, that --  
11 that that is -- it's not a safe assumption.

12 MPI confirmed that in terms of its  
13 estimates and weekly indemnity frequency, it did not  
14 calculate regression statistics to test them.

15 And with regard to collision severity -  
16 - total loss collision severity to be more accurate --  
17 that it uses a simple average for trend -- a three (3)  
18 year trend -- and that's that jagged line that we  
19 discussed in cross-examination. And relies upon one  
20 (1) data point as its -- as its starting point. And  
21 those were candid and important admissions from our  
22 clients' perspective.

23 So let's talk about Oliver Wyman.  
24 Obviously, an important element of this Board's role,  
25 when it's looking at just and reasonable rates, are

1 whether forecasts are reasonably reliable.

2 To that end, our client retained Oliver  
3 Wyman, an internationally recognized actuarial firm.

4 And Oliver Wyman certainly has -- has roots in  
5 Philadelphia and in New York. But it brought to this  
6 proceeding the insight it gained from its advisory  
7 work, not just in the United States, but it's work in  
8 every Canadian province, except for Quebec.

9 And it offers its Canadian services  
10 both to independent rate regulators in places like  
11 Ontario and Saskatchewan, as well as other public  
12 organizations such as our clients.

13 And, obviously, as this Board is aware,  
14 its outstanding advisory and teaching skills are  
15 recognized by organizations such as the Canadian  
16 Automobile Insurance Rate Regulators Association.

17 Oliver Wyman, of course, appeared  
18 before and presented to CARRS, C-A- -- Canadian Auto  
19 Rate Regulators Association just prior to the General  
20 Rate Application.

21 By way of overview, what did the Oliver  
22 Wyman evidence tell us? It highlighted that there are  
23 opportunities to modernize and make more rigorous the  
24 MPI approach to claims incurred forecasting. And it  
25 highlighted the importance of this, given the sheer

1 magnitude of the claims incurred in terms of effecting  
2 the ultimate rate indicator. They suggested that  
3 Manitoba Public Insurance's approach would benefit  
4 from a more rigorous and transparent analytic  
5 approach.

6                   But they also had common ground with  
7 MPI and with other Canadian auto insurance experiences  
8 to the point that claims frequency is trending  
9 downward due to a variety of factors: better vehicle  
10 safety, road safety, and persons working more  
11 frequently at home. And you saw that quote from  
12 Oliver Wyman earlier in the evidence.

13                   What did Oliver Wyman do? They looked  
14 at forty (40) aspects of Manitoba Public Insurance's  
15 approach to predicting claims incurred; collision  
16 total loss, frequency in severity, weekly indemnity  
17 frequency in severity. They even eyeballed the very  
18 small rodent estimates under comprehension.

19                   So they lifted those portfolios and  
20 claims incurred forecast -- the big huge ones like  
21 collisions, the material ones like weekly indemnity,  
22 and the tiny ones like rodents.

23                   And they looked at them with the view  
24 to circumstances where their views on projected claims  
25 incurred differed materially from those of MPI.

1                   In thirty-two (32) of those cases, they  
2 did not identify a materially different view on  
3 projected claims incurred.

4                   This does not imply an endorsement of  
5 the MPI forecasting approaches, but what it does  
6 suggest is that they would not have come up with a  
7 materially different estimate. Think of, for example,  
8 rodents. Is that going to move the needle? Not very  
9 likely.

10                  In some of the thirty-two (32) cases,  
11 Oliver Wyman estimated a lower result in terms of  
12 claims incurred. In others, it estimated a higher  
13 result based either in statistical analysis or  
14 visualization. But, in all of these cases, the  
15 difference in projected claims incurred was not  
16 expected to be material.

17                  So, it's not, as my friend from  
18 Manitoba Public Insurance may have inadvertently  
19 suggested, that they left out all the bad results and  
20 kept in all the good ones. It's just, they exercised  
21 judgment and looked at materiality. Again, think of  
22 rodents unlikely to be material. Slide 94.

23                  Oliver Wyman identified eight (8)  
24 forecast of claims incurred perils where the  
25 methodology of MPI appears unreasonable and the

1 outcome for claims incurred is material. And that's  
2 well documented both in their evidence and -- and --  
3 and in their powerpoint and I'll take you to one (1)  
4 particular example.

5                   Assuming that the PUB accepted the  
6 Oliver Wyman proposed methodology in all eight (8)  
7 cases, this would improve the claims incurred forecast  
8 by somewhere between four and a half (4 1/2) and 5  
9 percent. And there's a question for the PUB on the  
10 record on that.

11                   I -- I want to be clear here, if you  
12 think of a 5 percent change in claims incurred, claims  
13 incurred are a big part of the rate indication, but  
14 that is not a one-to-one relationship with the  
15 ultimate revenue requirement, obviously. Slide 95.

16                   Before I get to some of the  
17 methodological recommendations of Oliver Wyman, I do  
18 want to highlight yet another exchange in the  
19 evidence, in terms of a really impressive cross, I've  
20 got to say by Ms. Moore, in terms of our witness.

21                   And Ms. Moore was bringing to our  
22 attention the issue of collision frequency and I know  
23 how significant collision is to the ultimate claims  
24 incurred. And -- and she was bringing to the  
25 attention an -- an exhibit and an update in terms of

1 year-to-date experience in Manitoba Public Insurance.  
2 And asking, what would it tell us about Oliver Wyman's  
3 findings, that frequency projection is overstated for  
4 '23/'24 and '24/'25.

5                   And Mr. -- Mr. Raj Sahasrabuddhe, as he  
6 observed, what he's telling us here in this quote, is  
7 that observed frequency is coming in less hot, it's  
8 coming in lower than MPI anticipated, and of course  
9 more consistent with the Oliver Wyman conclusions,  
10 that the MPI frequency provision for collision --  
11 projection, not provision, is overstated.

12                   That was a -- an important exhibit and  
13 an -- an important update and slide 96, again, an  
14 excellent cross by PUB counsel, really enforces this  
15 point, because MPI earlier in the hearing had admitted  
16 the same thing. Related frequency continues to be  
17 lower than the 5 percent adjustment, and that's the  
18 first quote.

19                   And confirming that the frequency  
20 expectations for collision, that big ticket item, are  
21 overstated based upon the information before her.

22                   What we're assuming collision frequency  
23 is 5 percent -- percent lower because people working  
24 from home, it could actually be even -- it could go  
25 lower, in that, if we were to base it on today's

1 claims.

2                   Again, you see the able cross-  
3 examination and to the extent that that's correct,  
4 savings are underestimated. Just to stay on that  
5 slide for a second.

6                   It's really important to look at  
7 overall developments and data points not a particular  
8 snapshot in time. We could have a really bad winter,  
9 but that is an important dialogue because its  
10 supportive of a key observation of Oliver Wyman that  
11 MPI is likely to be over estimating collision  
12 frequency. Thank you. Slide 97.

13                   This is just an excerpt from the -- the  
14 Oliver Wyman evidence. Looks to me like slide 8,  
15 yeah, there it is in the corner.

16                   And the point that they're making on  
17 the right-hand side is what's material. You look at  
18 collision, half a billion dollars, you look at other  
19 important lines of business, like comprehensive around  
20 a hundred (100) million.

21                   The combination of the PIPP benefits,  
22 accident benefits and weekly indemnity, getting close  
23 to a hundred and eighty (180) million. Highlighting  
24 just their materiality exists and -- and what Oliver  
25 Wyman did was -- they focused on these big ticket

1 coverages and looked at where the claims incurred was  
2 unreasonable, and whether it was -- it would have  
3 affect the rate application. And -- and that's the --  
4 the essential exercise that they performed. Slide 90  
5 -- 98 if we can turn.

6 This is an under appreciated slide.  
7 This is slide 45 from the Oliver Wyman presentation,  
8 and they talk about modernizing the MPI approach on  
9 claims incurred. This is what they're talking about.

10 The first step is data visualization.  
11 Seeing it to understand it and -- and importantly  
12 plotting on a log access to consider changes on a  
13 percentage or exponential basis.

14 I think sometimes when people hear data  
15 and visualization, they just imagine -- they --  
16 they're just looking at it. An important part of that  
17 exercise, is plotting it on that log access,  
18 considering change on a percentage basis.

19 And, if you think of the -- the -- the  
20 dispute between Oliver Wyman and Manitoba Public  
21 Insurance, in terms of weekly indemnity, for example,  
22 Oliver Wyman says you're plotting it the wrong way.  
23 You're not looking at change as it most often occurs  
24 in the real world which is on a percentage basis,  
25 you're doing it in a linear fashion, on an amount

1 basis.

2                   The second step that Oliver Wyman  
3 proposes, based upon its experience across North  
4 America, including nine (9) Canadian jurisdictions, is  
5 doing modeling to explain the relationship.

6                   And in third, is to test the modeling,  
7 evaluating the fit and, we'll come to that, but an --  
8 an exercise that MPI often did not show on this --  
9 sorry, let me back up, an exercise that Manitoba  
10 Public Insurance definitely did not do. Then it came  
11 to weekly indemnity, for example, and -- and if you  
12 look at the MPI reports this evaluation of fit is --  
13 its not clear if it's done. It's certainly not  
14 reported, or rarely reported.

15                   The fourth element of a modern best  
16 practice approach to claims incurred, is actually  
17 reporting in a transparent fashion, lending confidence  
18 to stakeholders and explaining the predictive value.  
19 Slide 99, please.

20                   If you get an opportunity to go back to  
21 Oliver Wyman's evidence, this is what they're trying  
22 to do here. This is taking the weekly indemnity  
23 frequency model and this is MPI's approach. And, on  
24 the right-hand side, and I'm not going to get into all  
25 -- all the coverages, but Oliver Wyman is expressing

1 the two (2) fundamental concerns.

2                   First is, MPI's doing this in a -- a  
3 linear fashion, which Oliver Wyman says is out of step  
4 with Canadian regulatory practice, because the real  
5 world understands that frequency tends to occur on a  
6 percentage basis.

7                   And also testing for fit and reporting  
8 that this particular expectation of weekly indemnity  
9 has a poorer fit, weak R square statistics and very  
10 poor 'P' value reports.

11                   So, transparent, those four (4) steps  
12 visualization and then modeling, testing for fit and  
13 then transparently reporting. This is illustrative of  
14 what Oliver Wyman would expect in other jurisdictions  
15 and -- and what we should expect in Manitoba. Slide  
16 100 please.

17                   Here's Oliver Wyman's analysis of the  
18 same model and look at how it reports. They start  
19 with an acknowledgment that the 'P' value is slightly  
20 greater than the upper threshold but that its model  
21 explains a significantly higher percentage of the  
22 variation in the data.

23                   They also talk to the value of using a  
24 log linear or exponential approach. Again,  
25 visualization plotting exponentially or log linear

1 fashion, modelling, testing for fit, and transparently  
2 reporting the strengths and the weaknesses of your  
3 analysis. We put this in here just as a snapshot, so  
4 we can get a sense of what Oliver Wyman is  
5 recommending; that this Board should expect, in terms  
6 of reporting and claims incurred.

7 I want to spend just a few moments on  
8 questions raised by -- of Oliver Wyman, and start with  
9 the PUB questions. Again, I've complimented PUB  
10 counsel for its adept cross-examination and, if you  
11 think of what the PUB did, it got right into a  
12 technical analysis of the Oliver Wyman report and it  
13 focussed on two (2) of the eight (8) recommendations.

14 It didn't meaningfully test or  
15 challenge the other six (6) and, in fact, in one of  
16 the other key recommendations, its in -- inq --  
17 inquiries reinforce the Oliver Wyman observations.

18 The PUB did raise concerns, in terms of  
19 the hail comprehensive approach. It also asked, in  
20 our clients' view, questions of co -- clarification,  
21 in terms of collision severity. And I just want to --  
22 on pages -- slide 101 and slide 102, we -- we cite  
23 from the record where Oliver Wyman addresses these  
24 questions. Go to 102, please.

25 Importantly, and from our clients'

1 perspective, six (6) of the core recommendations of  
2 Oliver Wyman were not meaningfully tested in cross-  
3 examination. Comprehensive, we -- we would agree that  
4 there are -- it is a place comprehensive hail  
5 frequency, where reasonable folks could disagree, and,  
6 so, we're not really pushing that recommendation.

7           But, in terms of collision total loss  
8 severity, on -- on this slide, being 102, we  
9 understand the point that the Public Utilities Board,  
10 through its inquiry or at lea -- at least its advisors  
11 were trying to make, is that the most recent year is  
12 fully credible but being fully credible is not the  
13 same as being fully predictive.

14           And consider what MPI did, which was  
15 focus entirely on one (1) data year, as its -- as its  
16 starting point versus the inclusion of -- of a far  
17 deeper body of relevant data and, the Oliver Wyman  
18 approach, in our clients' view, is more likely to be  
19 fully predictive of the future than the MPI approach,  
20 especially 'cause that '21/'22 data point is the most  
21 uncertain and the most volatile and it contains the  
22 highest percentage of open claims.

23           So, in terms of what appeared to be the  
24 direction of PUB counsel and not testing six (6) of  
25 the eight, our clients definitely agree with that.

1 Raising some legitimate questions on comprehensive  
2 hail, our clients accept. But our clients' confidence  
3 in the Oliver Wyman recommendations on collision total  
4 loss severity remain unimpaired.

5 I want to contrast what the PUB did  
6 with what MPI did in cross-examination, and I have to  
7 be honest, technically, I totally enjoyed the cross-  
8 examination of -- of my friend, Mr. Scarfone, and --  
9 and of Mr. Guerra. They did what our teachers,  
10 students -- fir -- first day of cross-examination  
11 preparation. If you take it up at the analysis, make  
12 some noise, do the smoke and mirrors, divert and  
13 distract but never meaningfully engage in the  
14 substance of the analysis, and I thought MPI  
15 demonstrated a -- a classic example of that approach  
16 and I commend them for that.

17 And -- and, you know when MPI actually  
18 gave its closing arguments on Monday, in terms of the  
19 substantive analysis, it didn't rely on its cross. It  
20 relied on the two (2) points identified in the cross  
21 of the PUB. The only meaningful technical arguments  
22 advanced by MPI relied on the PUB questions.

23 And in our respectful submission, MPI  
24 never dared explore the analytic credibility of Oliver  
25 Wyman in the smoke and mirrors.

1                   To the extent that MPI's concern is  
2 that Olive -- Oliver Wy -- Wyman's recommendations  
3 lead to lower revenues, it certainly should take a  
4 more nuanced -- nuanced look at the rec -- at the --  
5 at the Oliver Wyman process, as we explained earlier.

6                   It also should be alive to Ms. Low's  
7 ounce of conservatism estimate because if the best  
8 estimate does not form the basis for the underlying  
9 analysis, it is not surprising that recommendations  
10 that are material will tend to lead to lower  
11 estimates.

12                   MPI's assertion also asserts that  
13 Oliver Wyman lacks independent (sic) and displays bias  
14 and, from our clients' perspective, that would no  
15 doubt come as a surprise to the independent rate  
16 regulators in Canada that rely on its advice, as well  
17 as to the Canadian Association. With the greatest of  
18 -- of respect, those arguments, in our clients' view,  
19 smack of desperation.

20                   In terms of the Oliver Wyman  
21 recommendations, our clients are recommending that the  
22 PUB accept seven (7) of the eight (8) recommendations,  
23 with the exception of the comprehensive hail frequency  
24 and that it accept the seven (7) of the eight (8)  
25 recommendations, on the grounds that they better fit

1 the claims incurred data and are more reasonable.

2 Over to Mr. Klassen.

3

4 CONTINUED BY MR. CHRIS KLASSEN:

5 MR. CHRIS KLASSEN: Thank you.

6 Turning our attention now to the DSR, this Board is no

7 stranger to the fact that cross-subsidization has

8 plagued the Driver Safety Rating system, since its

9 initial approval in 2009.

10 And it's our clients' respectful  
11 submission today that MPI has shown little commitment  
12 to change and little concern for those of its  
13 customers who have long been overcharged.

14 We saw, in last year's proceeding, and  
15 it was not the first time that the Board took this  
16 approach but, in last year's GRA Order, the PUB  
17 impressed upon MPI the gravity of the unfairness that  
18 it perpetuates against the safest drivers and  
19 requested that, in this year's application, it file a  
20 proactive plan for correction and that took place in  
21 Directive 11.15.

22 And in response to that directive, this  
23 year, MPI proposed, again, only marginal changes to  
24 the discounts and deferred meaningful progress in  
25 cross-subsidization years into the future. Next

1 slide, please.

2                   It is our clients' submission that  
3 potential future changes to the rating model, being  
4 MPI's proposed transition to Generalized Linear  
5 Modelling, should not be allowed to perpetuate  
6 unfairness today.

7                   And it is our clients' position that  
8 there is room today for MPI to make faster progress  
9 toward correcting cross-subsidization in the DSR,  
10 before its proposed implementation of Generalized  
11 Linear Modelling. Next slide, please.

12                   And CAC (Manitoba) proposes a number of  
13 principles that might guide MPI in taking steps toward  
14 correcting cross-subsidization in advance of its move  
15 or proposed move toward GLMs.

16                   First, as a starting point, in CAC  
17 (Manitoba)'s view, MPI's proposal, to merely allocate  
18 future rate increa -- decreases -- I apologize -- to  
19 the DSR levels most acutely in need of correction is  
20 inadequate.

21                   Instead, CAC (Manitoba) recommends  
22 that, in future years, the base rate, which we learned  
23 about in this year's proceeding, be increased, on an  
24 annual basis, by up to 5 percent, to allow for more  
25 substantial adjustments to the highest DSR discounts.

1                   However, this year, in particular, CAC  
2 (Manitoba) is concerned about the pressures that  
3 inflation has inflicted on Manitoba households. And,  
4 so, for this year, to the extent that this Board  
5 elects to approve a rate decrease, CAC (Manitoba)  
6 proposes that a substantial portion of that decrease  
7 be applied uniformly, across customers, to largely  
8 mitigate the effect of the removal of the capital  
9 release provision and, given current inflationary  
10 pressures, any rate da -- decrease, CAC (Manitoba)  
11 proposes, should be used, first, to mitigate the  
12 effect of the removal of the capital release to within  
13 1 to 2 percent before allocating remaining changes to  
14 the DSR levels and discounts. Next slide, please.

15                   With respect to the primary driver  
16 model, we'll note briefly that CAC (Manitoba) has not  
17 to date, in this proceeding or past, endorsed a  
18 transition to the primary driver model.

19                   CAC (Manitoba) looked forward to  
20 engaging more deeply on that issue this year, but  
21 notes that the MPI's proposed five (5) year transition  
22 plan is not sufficiently detailed for informed  
23 decision making.

24                   And so for the time being, on this  
25 particular issue, CAC (Manitoba) recommends that the

1 steps, the data collection steps outlined in the early  
2 stages of MPI's five (5) year plan, be taken so that  
3 future decision making can be properly informed.

4 Slide, please.

5 I bring your attention to road safety.  
6 It's been acknowledged by MPI's witnesses this year  
7 that road safety has admittedly taken a backseat  
8 through the pandemic, both through the postponing of  
9 the technical conference and cancellation of certain  
10 programs.

11 But we did see earlier this year in the  
12 technical conference and learned more about, again, in  
13 this proceeding that MPI is proposing certain new  
14 approaches to its road safety programming. And those  
15 include a 2022 to 2025 road safety strategy and a  
16 renewed commitment to data-driven decision making  
17 enabled through new approaches to data collection and  
18 analysis.

19 And for today, CAC (Manitoba) chooses  
20 to share a laudatory comment shared with our team in  
21 preparation for the road safety technical conference,  
22 and that is with respect to MPI's road safety  
23 strategy: that if they implement this plan as  
24 described, they will see many reductions in fatalities  
25 and injuries in the years following.

1                   And that's a comment from Ms. Mavis  
2 Johnson who is an internally recognized road safety  
3 expert who's well known to this Board and supports CAC  
4 (Manitoba) in its engagement with road safety issues.  
5 And with that in mind, CAC (Manitoba) looks forward to  
6 reviewing progress on the implementation of the  
7 strategy in future proceedings.

8                   But before moving on from road safety,  
9 CAC (Manitoba) does find it appropriate to offer one  
10 (1) key and important reminder to -- to Manitoba  
11 Public Insurance, and that's that MPI should remember  
12 that it is uniquely positioned to add value to road  
13 safety initiatives province-wide.

14                   And we heard this year that MPI is  
15 aware of that important role that it holds, but that  
16 that needs to be held in harmony with the reality that  
17 Manitoba Public Insurance's mandate with respect to  
18 road safety is narrow.

19                   And so CAC (Manitoba) encourages MPI to  
20 continue to pursue road safety interventions with real  
21 impacts on claims costs while also developing  
22 partnerships which provide the wide range of road  
23 safety stakeholders in Manitoba with access to its  
24 valuable data sets and expertise. Slide please.  
25 Thank you.

1 CONTINUED BY DR. BYRON WILLIAMS:

2 DR. BYRON WILLIAMS: To take us home,  
3 we want to talk about the Rate Stabilization Reserve  
4 and the Capital Management Plan. And obviously, our  
5 clients' participation on this subject matter has been  
6 less intense than it otherwise would have been. These  
7 are fundamentally important matters, but legislative  
8 changes have overtaken our -- our client in this area.  
9 So if -- if I adopt a somewhat mournful tone on behalf  
10 of our clients, you'll understand.

11 We don't need to turn to the title of  
12 this slide, but the title -- the title of this  
13 submission, but the title was "Loss Balance, Loss  
14 Controls: MPI and Captive Ratepayers."

15 And when we were talking -- and we were  
16 talking about loss controls in the title page, we're  
17 talking about the failure to control expenditures and  
18 the failure to apply well-known methodologies that MPI  
19 has successfully employed in the past.

20 When we talk about loss balance, we're  
21 speaking about the general application which we see  
22 has been against the -- the public interest and our  
23 clients' interest, as well as the approach to the Rate  
24 Stabilization reserve.

25 Our client -- and we -- we will not

1 offer any pointed comments about our clients' views on  
2 how MPI has honoured or not honoured its prior  
3 commitments under the existing plan because we're  
4 being courteous.

5 In terms of important issues like the  
6 transfer to the DVA, our client accepts that they've  
7 taken place and that the PUB does not have the lawful  
8 means to remediate those actions.

9 Our client in no way accepts the  
10 premise that those expenditures were authorized under  
11 the governing legislation, properly authorized.

12 With regards to BITSA, our client  
13 accepts that the Legislature has spoken both in  
14 eliminating the reserves regulation which speaks to  
15 rate rebates -- or rate releases and in entrenching  
16 basic financial targets into the law.

17 And while important legal questions  
18 remain about BITSA, from our clients' perspective it  
19 is -- there is no doubt that the PUB has lost its  
20 authority to initiate rate rebates absent an  
21 application by MPI.

22 Before we leave this important chapter  
23 in the PUB history, our client appreciates the efforts  
24 of the Public Utilities Board over the past two (2)  
25 decades to bring rigour and public interest balance to

1 the determination of financial targets for rate-  
2 setting purposes. That independent evidence-based  
3 approach has served Manitobans extraordinarily well,  
4 and our clients thank you.

5           Again, there are limits to what we can  
6 do to pontificate at this point in time, given  
7 legislative changes. But our client has abiding  
8 concerns about the appropriateness of the MCT formula  
9 in a rate-setting context, as well as the  
10 vulnerabilities of that calculation to discretion and  
11 to error.

12           Fundamentally, going back to the loss  
13 of control point, our client also has concerns that  
14 the additional cushion provided in terms of excess  
15 reserves to MPI by virtue of BITSA may further incent  
16 unreasonable and imprudent spending behaviour.

17           That has been one (1) of the core  
18 concerns of our clients over the last twenty (20)  
19 years, and we have fought vigorously to bring evidence  
20 and rigour to financial targets. Because this a  
21 monopoly, consumers have no choice, and we don't want  
22 this monopoly to get too comfortable. We don't want  
23 it to have that excess cushion.

24           Slides 114 and 115, we won't go into in  
25 detail except for the express cross-examination why

1 the MCT is not a good fit for the purposes of the RSR.

2           At a high level, they get to the point  
3 that the MCT was designed for a very different  
4 purpose, the financial well-being of companies who are  
5 federally regulated, many of those companies in a  
6 competitive marketplace, where a single bad year can  
7 make them very vulnerable.

8           And if they have to raise rates, they  
9 can lose significant market share and -- and put the  
10 well-being of the insured at risk -- a very different  
11 purpose than the more modest purpose of the Rate  
12 Stabilization Reserve.

13           On slide 116, our client does wish to  
14 highlight how the exercise of discretion with regard  
15 to retained earnings and the MCT may harm the  
16 interests of ratepayers. And again, a really helpful  
17 cross-examination by PUB counsel in terms of IFRS  
18 selections and in terms of their, at this point in  
19 time, adverse impact on the RSR to the tune of around  
20 83 to 84 mil.

21           Again, our clients, in terms of  
22 evaluating the proposed capital management plan, note  
23 how much discretion MPI has apparently to use  
24 Extension reserves within the Corporation as it sees  
25 fit, at least in Manitoba Public Insurance's view, as

1 well as, so important for ratepayers to understand,  
2 MPI's understanding that it is under no obligation to  
3 issue rebates even if it is at or above 120 percent  
4 MCT. And that is consistent, sadly, with our clients'  
5 interpretation of the legislation.

6           Manitoba ratepayers are very -- going  
7 back to slide 117. Manitoba ratepayers are very  
8 vulnerable to the exercise of MPI discretion with  
9 regards to the MCT and how excess returns are utilized  
10 -- excess reserves, excuse me. They no longer have  
11 the PUB as an intermediary -- as an evidence base  
12 intermediary to protect ratepayers.

13           Slide 117 just makes the point that,  
14 while the RSR in theory is there, or unexpected  
15 variances from budget extreme events, it -- just the  
16 mechanics of it, it can be there for bad weather, bad  
17 investments and prudent investments, or bad  
18 management.

19           And, again, our concern is that it is a  
20 cushion for bad management. And we see in this  
21 Hearing a living, breathing example of the  
22 opportunities for bad management, especially with the  
23 significant growth in Basic operating expenses and  
24 full-time equivalents.

25           In terms of our clients'

1 recommendations in terms of the revenue requirement --  
2 oh, actually, slide 118. Sorry, I missed that one.

3

4

(BRIEF PAUSE)

5

6 DR. BYRON WILLIAMS: People may not  
7 remember this, but think back to the first day of the  
8 -- the Hearing where there's really bright, young  
9 students from the Faculty of Law's Rights Clinics came  
10 forward and brought a really thoughtful analysis of  
11 the General Rate Application from the perspective of  
12 the public in terms of accessibility of information,  
13 calls for a table of comment and -- and plain language  
14 summaries.

15 Our clients took note of that. They  
16 thought that was fantastic advice. Our clients have  
17 also recognized that this has been a troubled rate  
18 application for a variety of reasons. And without  
19 trying to diminish the hard work of everyone involved  
20 in the -- in the rate application, there have been  
21 many revised files, a multitude of unconsolidated  
22 documents, and goodness knows how many undertakings  
23 with regard to confidentiality, probably about eight  
24 (8).

25 Our clients would recommend that prior

1 to the next General Rate Application MPI get together  
2 informally with the Board, advisors, and certainly  
3 informally with Interveners. I don't think we need a  
4 technical conference, but just talk about ways that we  
5 can make this application process better, including  
6 the filing itself, and opportunities to make it  
7 accessible to the public.

8           And perhaps those bright, young  
9 students from the Faculty of Law Rights Clinic might  
10 also be invited, as well as some folks who -- who more  
11 -- are more representative of the general population.

12           We can do better. It's such an  
13 important public process. Manitobans deserve the  
14 opportunity to have a better understanding of this  
15 process. And collectively, we think that there are  
16 some thoughtful ideas that could be exchanged in -- in  
17 an informal matter. And we would invite MPI to reach  
18 out to ourselves, as well as other Interveners, and  
19 explore that opportunity.

20           Slide 119, we talked about a strong  
21 signal at the start. Our clients are asking for a  
22 just and reasonable signal for the revenue  
23 requirement.

24           Our clients have grave concerns that  
25 the budget presented by MPI in this proceeding is

1 unreasonable and imprudent and -- and does not  
2 demonstrate the type of expenditure control that we've  
3 come to expect from MPI or other Crowns.

4           Our clients have concerns with the  
5 "ounce of conservatism" in the MPI claims incurred  
6 forecast, the need to forecast for best estimates.  
7 And certainly, they believe that Oliver Wyman has set  
8 out a pathway to -- to assist MPI and -- and  
9 ratepayers to get there.

10           And our client is also trying to  
11 navigate the longstanding enduring inequities to  
12 driver safety rating while recognizing the  
13 extraordinary times we live in. Slide 120.

14           In terms of the just and reasonable  
15 signal for the revenue requirement, our client has  
16 done some scenarios and certainly taken into account  
17 the unreasonable increase in full-time equivalents and  
18 operating expenses, the substantiated role in  
19 placeholder budgets, the lost opportunity on undue  
20 risk in the current investment portfolio, as well as  
21 challenges, material challenges, with certain claims  
22 incurred forecasts.

23           Our clients are asking for a  
24 significant rate reduction, between 5 and 6 percent,  
25 as compared to the current indication. And they

1 believe there is strong support for that in terms of  
2 the extreme increases in FTEs and operating expenses,  
3 as well as the insight provided by Oliver Wyman in  
4 terms of excess conservatism in the estimates of the  
5 current investment portfolio, as well as ongoing  
6 trends in terms of frequency, especially collision  
7 frequency.

8 Slide 121, Mr. Klassen.

9

10 CONTINUED BY MR. CHRIS KLASSEN:

11 MR. CHRIS KLASSEN: Thank you. A  
12 high-level summary of CAC (Manitoba's) recommendation  
13 for the allocation of its proposed rate decrease was -  
14 - was shared a few moments ago.

15 But to offer a little bit of  
16 clarification, our client struggled significantly with  
17 -- with its DSR proposal, and the source of that  
18 struggle was its concern for Manitobans' response to  
19 significant inflationary pressures that are being felt  
20 in monthly bills and at grocery stores across the  
21 province this year.

22 And so, CAC (Manitoba) poses as much as  
23 possible that the rate decrease it requests from this  
24 Board be allocated to mitigate the impacts of the  
25 removal of the capital release provision. And if the

1 rate decrease approved is greater than the amount of  
2 the capital release provision, then CAC (Manitoba)  
3 would propose that the capital release be mitigated in  
4 its entirety and that the remainder of the release be  
5 directed toward collecting cross-subsidization in the  
6 DSR. And that's -- in a perfect world, if it could  
7 achieve both, it would be happy.

8                   If that's not possible, if the rate  
9 decrease to be approved does not exceed the amount of  
10 the capital release, CAC (Manitoba) maintains its  
11 concerns for the impacts of inflation but also  
12 recognizes the long -- longstanding unfairness that  
13 MPI perpetuates at the high end of the DSR scale.

14                   And so, it would propose that the rate  
15 decrease approved first be allocated uniformly across  
16 ratepayers to as much as possible mitigate the effects  
17 of the removal of the capital release ideally to a  
18 margin with 1 to 2 percent and that remaining amounts  
19 then be allocated to addressing cross-subsidization at  
20 the high end of the DSR.

21

22 CONTINUED BY DR. BYRON WILLIAMS:

23                   DR. BYRON WILLIAMS: I'll just  
24 conclude. It is always an incredible honour to  
25 participate in these processes. And our clients are

1 so grateful for the opportunity to intervene and  
2 appreciate the opportunity to be -- take part in an  
3 independent, evidence-based process, balancing the  
4 complexities of the public interest.

5 And so, with that, subject to any  
6 questions this Board may have, those are our -- our  
7 closing submissions.

8 THE PANEL CHAIRPERSON: Thank you, Mr.  
9 Williams and Mr. Klassen.

10

11 (BRIEF PAUSE)

12

13 BOARD CHAIR GABOR: Thank you. I've  
14 got a few questions. Kristen, could you go to screen  
15 108, please. Mr. Klassen, I just want to understand  
16 what you're asking for. Bullet 2:

17 "CAC recommends that in future years  
18 the base rate be increased by up to  
19 5 percent to allow for more  
20 substantial adjustments."

21 Then in the last one you said you're  
22 concerned about inflation. So, in this year, it'd be  
23 1 to 2 percent. Is it that it is -- is the proposal  
24 it be 5 percent in future years or is it that we need  
25 to look year-by-year at what the inflation is?

1 MR. CHRIS KLASSEN: Thank you for your  
2 question. And this -- the experience of this  
3 particular year is illustrative, of course, that that  
4 inflation is variable and volatile.

5 And CAC (Manitoba) would recommend that  
6 -- the recommendation on bullet 2, that the base rate  
7 be increased yearly by an amount up to 5 percent. But  
8 again, that that be a consideration on a year-by-year  
9 basis based on the pressures facing Manitobans.

10 BOARD CHAIR GABOR: Right. So if we  
11 had high inflation next year, the position is -- and  
12 it's 5 percent -- it's -- 5 percent considered in  
13 light of the inflation for the next year.

14 MR. CHRIS KLASSEN: Exactly. So  
15 similar to how CAC (Manitoba) is proposing an  
16 alternate to the 5 percent this particular year with  
17 reference to current circumstances.

18 BOARD CHAIR GABOR: Right. Okay.  
19 Thank you. Kristen, page 48.

20 Dr. Williams, in terms of the signal to  
21 -- to and through -- between 2 and 3 percent, is this  
22 a calculation or is this sort of a number you came up  
23 with that you thought was reasonable in the  
24 circumstances?

25 DR. BYRON WILLIAMS: To coin a phrase

1 that might have come from my cross-examination of CEO  
2 Herbelin, we started with a bottom-up exercise.

3           So our clients -- mindful of what the  
4 Public Utilities Board has done in -- in the past, we  
5 looked at different scenarios.

6           For example, what if you dropped off  
7 the \$19 million in terms of the growth in -- in normal  
8 operating expenses or -- we looked at a number of  
9 scenarios to get a sense of what those would look  
10 like. And a number of them were getting us to that 2  
11 percent range, so we tried to -- to test that.

12           We looked at a -- a stretch factor of  
13 zero (0) -- of -- similar to what was adopted with  
14 MPI. And again, that started to take us over 2  
15 percent. And then, we looked at the allocated -- or  
16 the placeholder budgets and thought there were  
17 additional opportunities there.

18           So I -- I want -- you asked me what we  
19 did. I'm hesitant to give evidence. But based upon  
20 the evidence of the record, we looked at a number of  
21 scenarios and -- and then, the clients ultimately did  
22 make a judgment call. But it wasn't unguided by  
23 scenarios and -- and we're trying to articulate at a  
24 high level on Exhibit 48 some of the elements. If  
25 that assists, Mr. Chair.

1 BOARD CHAIR GABOR: Okay. Would it be  
2 accurate to use a phrase that was used earlier during  
3 Oliver Wyman, which is, we looked at a number of  
4 scenarios and you performed an eyeball test as to  
5 whether (INDISCERNIBLE) reasonable, these other  
6 scenarios.

7 DR. BYRON WILLIAMS: We looked at a  
8 lot of data points, not only in scenarios, but if you  
9 think of what -- the oral argument that we took you  
10 through today, if you look at that unprecedented  
11 growth in terms of operating expenses or FTEs, there  
12 were numbers that -- that show up. You know, the 46  
13 million with the FTEs.

14 Those numbers -- so there was some  
15 judgment, but it was a pretty thorough examination of  
16 different scenarios.

17 The Board ultimately is balancing the  
18 public interest. It can look at those same kind of  
19 scenarios and we're pretty confident we've come up  
20 with numbers that look a lot like ours. And this is  
21 on the cost control side.

22 BOARD CHAIR GABOR: Okay. So Kristen,  
23 if you go to page 120.

24 DR. BYRON WILLIAMS: Your next  
25 question is how did we get from two (2) to three (3)

1 to fit this --

2 BOARD CHAIR GABOR: Well, how did you  
3 get to between five (5) and six (6)? Is it the same  
4 process?

5 DR. BYRON WILLIAMS: So if you think -  
6 - well, Mr. Chairman, if you think of the -- the two  
7 (2) core arguments that we brought here, leave aside  
8 what we're saying on investments. We're saying  
9 imprudent and unreasonable expenditures, and we think  
10 it's easier if the Board can replicate to get to the  
11 two (2) or three (3).

12 We're also taking issue with the claims  
13 incurred forecast. And you know that Oliver Wyman was  
14 in the range of 5 percent on claims incurred. Drop  
15 off comprehensive, do the math, and that's an  
16 explanation of where you get to that five (5) to six  
17 (6) range.

18 If that helps, Mr. Chair.

19 BOARD CHAIR GABOR: No, it helps. I  
20 guess the -- I guess the situation we face is that we  
21 spend three (3) weeks going through very specific  
22 data. And now we're given a -- a comment of, Well, we  
23 reviewed scenarios, it's not a formula. There's not a  
24 table. It's, We looked at a number of different  
25 factors and -- and came up with --

1 DR. BYRON WILLIAMS: Sir, if you want  
2 a practical route to some of the numbers that we're  
3 looking at, take, for example, what are the FTEs in  
4 the -- the current application? Make a judgment --  
5 you know, make a judgment call. What does it take it  
6 to back -- to get to last year's FTEs? What's the  
7 stretch factor?

8 It's a similar exercise that -- that --  
9 that you -- that you performed. That's the kind of  
10 exercise.

11 On the claims incurred, do you accept  
12 Oliver Wyman's evidence on these key issues or not?  
13 There's a -- There's a number that comes right out of  
14 those calculations, sir. The information is all on  
15 the record.

16 BOARD CHAIR GABOR: Thank you. Those  
17 are my questions.

18 THE PANEL CHAIRPERSON: Ms. Nemec...?  
19 Thank you very much. We're almost at noon. So we'll  
20 break now until one o'clock and continue with the rest  
21 of the Interveners, thank you.

22

23 --- Upon recessing at 12:01 p.m.

24 --- Upon resuming at 1:01 p.m.

25

1 THE PANEL CHAIRPERSON: Good  
2 afternoon, everyone. We'll continue with closing  
3 remarks.

4 Ms. Meek...?

5

6 CLOSING COMMENTS BY MS. CHARLOTTE MEEK:

7 MS. CHARLOTTE MEEK: Thank you, Madam  
8 Chair. On behalf of the Coalition of Manitoba  
9 Motorcycle Groups, I'll focus my submissions on  
10 several key issues today that are of importance for  
11 the motorcycle class, the first being, investments;  
12 then I'll look at the Driver Safety Rating system,  
13 Rate Stabilization Reserve, and Capital Management  
14 Plan, ratemaking and its implications in the large  
15 vehicle study, as well as road safety.

16 So starting off with investments, the  
17 Corporation's investment portfolio has been a topic of  
18 concern for CMMG for several years. In previous  
19 decisions, the Board has acknowledged and noted its  
20 concern with the disproportionate impact that interest  
21 rate changes have on the motorcycle class.

22 MPI was directed to examine this issue  
23 and consider a model which would ameliorate the effect  
24 of changing interest rates on motorcycle insurance  
25 rates. In particular, the Corporation was directed to

1 examine the inclusion of equities or growth assets  
2 which may support long-term liability.

3                   The following year, the Corporation  
4 asserted that it had no appetite for equity exposure  
5 in the Basic claims portfolio. Then the Corporation  
6 provo -- proposed the use of interest rates at points  
7 on a yield curve corresponding to the duration of  
8 liabilities.

9                   This methodology, the Corporation  
10 suggested, would have a positive impact for the  
11 motorcycle class, but since that time, these benefits  
12 have not materialized.

13                   Utilities in the financial market have  
14 been an ongoing factor for the last three (3) years.  
15 The COVID-19 pandemic shocked the world market, and  
16 the following year, while still volatile, demonstrated  
17 an impressive recovery aided by government stimulus.

18                   Most recently, impacts of the Russian  
19 war on Ukraine have affected global supply chains, and  
20 the wide rating -- ranging impacts on commodity  
21 markets, fuel, energy, and food. These fluctuations  
22 have contributed to high inflation levels and changes  
23 in the equity investments and investment returns.

24                   The Corporation in this Application  
25 paints a picture that the current investment strategy

1 is working as intended. This generalization ignores  
2 the continued fluctuations still be experienced by the  
3 motorcycle class. The Corporation's assertion also  
4 fails to acknowledge the lost opportunity cost of the  
5 Corporation's investment decisions.

6                   While the Corporation glosses over this  
7 factor, the shadow portfolios ordered by this Board  
8 pursuant to Order 159/'18 enable us to measure the  
9 costs of placing undue constraints on the basic  
10 portfolio by MPI.

11                   Of particular interest to CMMG is the  
12 Shadow Portfolio 2 which removes the constraint that  
13 prohibits the inclusion of equities and other assets  
14 that increase returns without adversely impacting  
15 risk.

16                   Portfolio 2 includes Canadian and  
17 private equities of 18 percent, real estate and  
18 infrastructure of 9 percent, and levered real-return  
19 bonds of 16 percent.

20                   In cross-examination of MPI, the  
21 Corporation confirmed that Shadow Portfolio 2 from  
22 inception in March 2019 to March 2022 has outperformed  
23 the Basic portfolio. Shadow Portfolio 2 had 3.32  
24 percent higher compound returns and 0.27 percent lower  
25 surplus volatility as compared to the policy

1 portfolio. As a result, Shadow Portfolio 2 had a  
2 higher risk-adjusted return than the policy portfolio.

3           The performance of the shadow  
4 portfolios allows us to partake in a historic  
5 examination of the prudence of MPI's investments. MPI  
6 acknowledged on cross-examination that optimization of  
7 a portfolio is to be viewed at the total portfolio  
8 level.

9           Further, when comparing two (2)  
10 portfolios, a more optimized portfolio would have less  
11 surplus volatility with equal expected return. What  
12 we can then observe from Shadow Portfolio 2 when  
13 compared with the Basic policy portfolio is that not  
14 only does Shadow Portfolio 2 have lower surplus  
15 volatility, but also benefited from much higher  
16 compound returns.

17           What this means then is MPI took more  
18 risk with the policy portfolio and at the same time  
19 earned lower returns.

20           MPI repeatedly asserts that a portfolio  
21 which includes equities or other investments offering  
22 higher returns is contrary to the purpose of the Basic  
23 claims portfolio. In doing so, MPI has essentially  
24 blacklisted certain asset classes.

25           This investment decision is contrary to

1 prudent investment strategy and creates a basic  
2 portfolio concentrated on one (1) type of risk --  
3 sorry, risk.

4                   As conceded by Mr. Bunston on cross-  
5 examination, the volatility of an asset class in  
6 isolation does not conclusively indicate how that  
7 asset class may impact the surplus volatility of a  
8 portfolio as a whole.

9                   Due to MPI's imposition of restricted  
10 constraints on the policy portfolio, the Corporation  
11 has taken on more risk and realized lower returns.  
12 Contrary to their assertion that the current  
13 investment strategy is working as intended, CMMG  
14 submits that ratepayers have lost on both sides of the  
15 coin: they have taken more risk and earned lower  
16 returns. This is the opposite of an optimized  
17 portfolio.

18                   This year, the Corporation retained  
19 Mercer to complete an asset-liability management  
20 study. Mercer's study provided a detailed examination  
21 of the risk-return tradeoffs arising from the various  
22 asset mixes available to MPI for the Basic claims  
23 portfolio.

24                   From MPI's perspective -- or, sorry,  
25 from CMMG's perspective, an essential element was

1 missing from the study to allow this Board to partake  
2 in a meaningful examination of the issue: MPI's  
3 chosen asset mixes were not determined and shared.

4                   Through the Information Request  
5 process, MPI indicated that the recommendations to be  
6 made to the investment committee would be filed with  
7 the 2023 GRA after their review and approval by the  
8 investment committee.

9                   Given that the investment committee is  
10 scheduled to meet after the conclusion of the  
11 hearings, it's unclear how MPI intends to fulfil that  
12 commitment.

13                   While CMMG acknowledges that the  
14 decisions for MPI's investment strategy ultimately  
15 rest with the board of directors, CMMG is perplexed by  
16 the Corporation's refusal to provide an indication of  
17 the anticipated recommendations to be provided to the  
18 investment committee prior to the commencement of this  
19 hearing.

20                   Without any prior notice, Mr. Bunston  
21 announced during the investment panel presentation  
22 that they are not recommending the inclusion of  
23 equities or levered bonds in the Basic claims  
24 portfolio. Given MPI's previous resistance to provide  
25 this information, it appears that the proposed

1 recommendations intended to be made to the investment  
2 committee were available.

3 MPI's refusal to provide some  
4 indication of the recommendations, even directionally,  
5 has hampered this hearing process. MPI has suggested  
6 that Interveners' ability to respond to the various  
7 asset mixes is not contingent upon the selection of  
8 recommended mixes by MPI.

9 While this may be true, in the interest  
10 of proportionality and to assist with focussing the  
11 issues being examined in this hearing, any directional  
12 indication provided by the Corporation would  
13 circumvent unnecessary examination.

14 If MPI's position regarding equities  
15 and levered bonds was provided prior to the  
16 commencement of the investment committee panel,  
17 Interveners could have focussed their examination to  
18 assist the Board in evaluating the reasonableness of  
19 that proposal.

20 As the Board will recall from previous  
21 applications, CMMG has been advocating for the  
22 inclusion of equities or other gross assets in the  
23 Basic claims portfolio for several years.

24 As previously outlined, it's necessary  
25 to examine a portfolio as a whole to determine its

1 optimality. In the IR process, PUB-MPI-1-128(e),  
2 Appendix 1, provides some insight on the optimization  
3 of a portfolio which includes a more inclusive and,  
4 therefore, diverse set of assets.

5                   What we see is an example of a  
6 portfolio with the inclusion of asset mixes which  
7 offer an opportunity to reduce risk and/or increase  
8 return.

9                   Mr. Lloyd from Mercer confirmed that  
10 Portfolio C, the lower-risk portfolio, Portfolio D,  
11 the mid-point, and Portfolio B, higher return, all  
12 have similar or far less risk than the current  
13 portfolio, while all providing similar or higher  
14 return.

15                   It's somewhat counterintuitive that  
16 even though some asset mixes provided by Mercer which  
17 include assets that are more volatile than those in  
18 the current portfolio, they still demonstrate lower  
19 overall surplus volatility ratios.

20                   Mr. Lloyd confirmed that this apparent  
21 contradiction is due to the fact that risks don't add,  
22 that correlations matter and, finally, that this  
23 demonstrates the diversification benefit of having  
24 other asset classes.

25                   This underscores the position that CMMG

1 has asserted before this Board for the last several  
2 years. The impact of asset classes on a portfolio  
3 must be reviewed at the total portfolio level.

4 Correlations between asset classes and the benefits of  
5 asset diversification are integral elements that must  
6 be considered.

7                   We have not been provided in this  
8 General Rate Application with any reasonable rationale  
9 for MPI's decision to exclude equities or levered  
10 bonds in the Basic claims portfolio.

11                   While MPI has mentioned that some  
12 additional risk related to leverage, for example, the  
13 Corporation has not provided any indication about the  
14 size of these additional risks or the controls that  
15 could be put in place to allow for their prudent use.

16                   Past GRAs, MPI has simply stated that  
17 the inclusion of equities is precluded by the risk  
18 appetite of the Board of Directors. Respectfully,  
19 this reasoning falls far short of being supported by  
20 any valid evidence.

21                   As a result, CMMG makes the following  
22 recommendations: that this Board make a finding that  
23 the inclusion of equities in the Basic claims  
24 portfolio is not in conflict with MPI's stated risk  
25 appetite when viewed from the proper total portfolio

1 perspective.

2 CMMG echos the recommendations of CAC  
3 (Manitoba), that the Board recommend the removal of  
4 the no equities constraint in the Basic claims  
5 portfolio.

6 CMMG recommends that MPI be directed to  
7 file with the 2024 GRA the recommendations made to the  
8 investment committee at their meeting on November  
9 10th, 2022.

10 Finally, CMMG recommends that MPI be  
11 directed to develop a new set of shadow portfolios to  
12 enable a further assessment of the impact of various  
13 key constraints imposed by the Corporation.

14 In constructing these portfolios, MPI  
15 shall consult with interested Interveners and the  
16 Board regarding the shadow portfolio compositions, any  
17 key assumptions and methodologies to be used, and will  
18 file a report in the 2024 GRA comparing the realized  
19 return of the shadow portfolios and other key metrics  
20 with those of the policy portfolios chosen by the  
21 Corporation.

22 I would like to move on to talk about  
23 the Driver Safety Rating system.

24

25 (BRIEF PAUSE)

1 MS. CHARLOTTE MEEK: CMMG has long  
2 been concerned with the issue of cross-subsidization  
3 existing in the current Driver Safety Rating system.  
4 Our clients were pleased with the direction from the  
5 Board arising from the 2022 GRA which directed MPI to  
6 provide a five (5) year plan for the implementation of  
7 a primary driver model.

8 The Court of Appeal decision reside --  
9 arising from MPI's application to appeal that order  
10 has reinforced the jurisdiction of this Board as it  
11 relates to the authority to examine and designate the  
12 methodology by which customers are grouped.

13 Since the inception of the DSR system,  
14 the goals and stated purpose of the program have been  
15 threefold: first, to provide higher rewards via  
16 reduced premiums for the safest drivers; second, to  
17 provide stronger incentives for higher risk drivers to  
18 improve their driving behaviour; and, third, to  
19 improve drivers' understanding of how their behaviour  
20 can affect the amount they pay for auto insurance.

21 In last year's GRA, MPI again confirmed  
22 that the DSR system is key in reducing collision  
23 frequencies than MPI and that the reduction in  
24 collision claims and losses were due to the DSR system  
25 working.

1                   Despite maintaining this position  
2 historically, in the 2023 GRA, MPI appears to be  
3 shifting its position. Adjusting it cannot say  
4 whether more accurate pricing incentivizes improved  
5 driving behaviour and ultimately reduces claims and  
6 claim -- claims and claims costs.

7                   While Ms. Jatana confirmed that,  
8 generally speaking, the DSR system can promote safe  
9 road driving behaviour, she qualified that statement  
10 saying she would respect the opinion of the actuary  
11 where it came to the rate making.

12                   These demonstrate a concerning change  
13 in the position of the Corporation regarding the  
14 benefits and real world impacts that an actuarially  
15 indicated DSR model can have on improvements in  
16 driving behaviour.

17                   Through cross-examination, CMMG  
18 reviewed the proposed changes to the DSR scale by MPI.  
19 The proposed changes offer the bare minimum in  
20 improvement to the current cross-subsidization and  
21 suggest that we can anticipate a lethargic transition  
22 towards actuarially indicated rates.

23                   The Corporation proposes that DSR level  
24 plus 15 shall not receive any rate change. The  
25 Corporation provided a rather lengthy and convoluted

1 explanation as to why this DSR level with the highest  
2 number of customers should not receive an improvement.

3           Ultimately, the explanation boiled down  
4 to the reasoning that the indicated rate of DSR level  
5 plus 15 is made up of the collective loss experience  
6 of drivers above and below that DSR level.

7           On cross-examination, Ms. Low conceded  
8 that this reasoning is easily applicable to every  
9 other DSR level which are each made up of the  
10 collective loss experience of drivers at higher and  
11 lower levels.

12           CMMG submits that DSR level plus 15  
13 should receive a rate change. As MPI has  
14 acknowledged, the indicated rate level for DSR 15 is  
15 56 percent.

16           MPI is proposing a discount increase of  
17 1 percent for DSR levels plus 9 to plus 13 and level  
18 16 and a 2 percent discount increase to DSR level plus  
19 14. On a dollar value perspective, a 1 percent  
20 discount increase is equal to approximately sixteen  
21 dollars (\$16). This is MPI's proposed adjustment for  
22 customers who are currently being overcharged between  
23 a hundred and ninety-nine (199) to two hundred and  
24 eighty dollars (\$280) annually.

25           The Corporation's original strategy to

1 adjust the DSR level relied on the use of the negative  
2 rate indication which would be reassigned to higher  
3 DSR levels.

4           The Corporation acknowledged that the  
5 original application did not consider including a base  
6 rate increase in tandem with the allocation of the  
7 negative rate indication. Ms. Low indicated this may  
8 be something that is considered in the future.

9           The extent of cross-subsidization  
10 between DSR levels was revealed as a result of pricing  
11 examination ordered by this Board in the 2019 GRA.  
12 However, it was unclear how long the substantial  
13 cross-subsidization has existed, it's safe to assume  
14 that drivers at DSR levels 9 -- plus 9 and above have  
15 been paying a hundred and ninety-nine dollars (\$199)  
16 or more in excess premiums for years.

17           This accumulative year-over-year impact  
18 is alarming. Given this history, a hasty transition  
19 to actuarially indicated rates is absolutely necessary  
20 as opposed to a slow and gradual progression.

21           Where MPI continues with the current  
22 method of change respectfully, it will take up to ten  
23 (10) years for DSR level plus 15 to achieve accurate  
24 pricing. Respectively, this time line and methodology  
25 is unreasonable.

1                   In order to shift the DSR system more  
2 quickly towards accurate pricing, it's necessary to  
3 raise the base rate. Doing so will slightly increase  
4 costs for all customers. But the revenue earned from  
5 such an increase can be allocated to the DSR levels  
6 experienced in the highest level of overpayment with  
7 the effect of ensuring ratepayers requiring the rate  
8 increase pay more and customers requiring a rate  
9 decrease pay less.

10                   MPI has acknowledged that in examining  
11 the issue of cross-subsidization in the DSR system,  
12 it's necessary to balance the unfairness of  
13 overpayment by customers at the top end of the scale  
14 against perspective rate increases for customers at  
15 the other end of the scale.

16                   CMMG respectfully submits that when  
17 undertaking this balancing exercise a more expedient  
18 approach is required. A 2 percent increase in the  
19 base rate would allow for an increase in DSR levels  
20 and DSR discount for DSR levels plus 9 and above.

21                   The increase discount can then be  
22 distributed to allow for an increase of 1 percent for  
23 DSR levels 9 to 11, 2 percent for 12 to 14, and a 4  
24 percent increase for DSR levels 15 and above.

25                   In this GRA, MPI was directed to file a

1 DSR transition plan which would outline MPI's proposed  
2 year-over-year transition to ultimately achieve  
3 accurate DSR discounts.

4           The Corporation requested that this  
5 directive be deferred to after the GLM pricing  
6 framework has been completed. On cross-examination,  
7 Ms. Low confirmed that pricing analysis is anticipated  
8 to be provided in the 2025 GRA.

9           It is unclear whether the Corporation  
10 is proposing that the transition plan as contemplated  
11 in Directive 11-15 of Board Order 134/'21 would then  
12 be filed with the 2025 GRA or the following year, the  
13 2026 GRA.

14           It's CMMG's position that the Directive  
15 11-15 should have been completed by MPI for this GRA  
16 and the request to delay this process for an  
17 additional two (2) or three (3) years is not  
18 reasonable, especially given the cumulative nature of  
19 the existing cross-subsidization.

20           As it relates to the primary driver  
21 model in compliance with Directive 11-13 of Board  
22 Order 134/'21, the Corporation provided a calendar  
23 time line outlining anticipated key initiatives and  
24 milestones to achieve implementation of the primary  
25 driver model over a six (6) year period.

1                   The proposed time line suggests an  
2 eighteen (18) month period to allow government  
3 approval and legislative changes to allow for  
4 collection of primary driver information.

5                   As pointed out by Madam Justice Steel  
6 in the recent Court of Appeal decision, section 6(2)  
7 of the MPIC Act, authorizes MPI to do all acts and  
8 things necessary to carry out its functions, which  
9 includes the power to prescribe the information in  
10 detail required to be set out in any form.

11                   CMMG submits that MPI has the requisite  
12 authority through the MPIC Act to obtain primary  
13 driver information from its customers.

14                   CMMG is encouraged by the Court of  
15 Appeal decision and previous directions from this  
16 Board requiring MPI to proceed with our examination of  
17 the primary driver model in earnest.

18                   CMMG encourages the Board to remain  
19 vigilant with this issue to ensure efficient  
20 collection of primary driver information, which is the  
21 key piece of data that will allow for a fulsome and  
22 accurate examination of the primary driver model.

23                   MPI suggests three (3) options for  
24 collection of data from customers. CMMG submits that  
25 the mandatory collection of this data, the data

1 renewal, is the only viable option from which an  
2 actuarially sound pricing examination can be  
3 completed.

4                   On this point, CMMG makes the following  
5 recommendations: That MPI's request that Directive  
6 11-15 of Order 134/21 be deferred to after the  
7 completion of the GLM pricing be rejected, and MPI be  
8 directed to provide a fulsome transition plan in the  
9 2024 GRA.

10                   That MPI be directed to immediately  
11 commence the collection of primary driver data, which  
12 data is to be obtained on a yearly renewal and on a  
13 mandatory basis.

14                   Where MPI believes that legislative  
15 changes are necessary that MPI forthwith provide  
16 recommendations to the Lieutenant Governor in Council  
17 for legislative amendments to allow the collection of  
18 this data from insureds, and to provide an update to  
19 the Board upon the recommendations being made.

20                   Finally, that the PUB approve a base  
21 rate increase of 2 percent, which shall be offset to  
22 be revenue neutral by increasing DSR discounts.

23                   The increase in discounts are to be  
24 allocated to DSR levels plus 9 and above, with DSR  
25 levels 9 to 11 to receive an increase in discounts

1 sufficient to neutralize the base rate increase. The  
2 remaining amount is then to be allocated to DSR levels  
3 plus 12 to 17, weighted to those DSR levels with the  
4 largest difference between current and indicated  
5 rates.

6 Now, to move forward with the  
7 discussion about the Rate Stabilization Reserve and  
8 the Capital Management Plan.

9 The RSR acts as a safeguard to protect  
10 customers against rate increases, which would  
11 otherwise be necessary due to unexpected variances  
12 from the forecast and due to events and losses arising  
13 from non-recurring events and factors.

14 While the Corporation acknowledged that  
15 the more money in the RSR, the more protection  
16 motorists have from unexpected variances from the  
17 forecast, this protection must be balanced with the  
18 principle that the Corporation should not an excess of  
19 reserve funds.

20 Ultimately, the Corporation has an  
21 ongoing duty to engage in actuarially sound  
22 forecasting methodologies.

23 As we all know, MPI is a Crown monopoly  
24 within Manitoba and, as such, the rate application  
25 process is an integral mechanism by which this Board

1 has an opportunity to review the methodologies  
2 employed by MPI in ratemaking and examine the capital  
3 held by the Corporation for use to pay claims  
4 liabilities.

5 The capital reserves being held by MPI  
6 for the Basic portfolio is our collective money.

7 First iteration of the Capital  
8 Management Plan was proposed to the Public Utilities  
9 Board in the 2022 GRA. That initial iteration relied  
10 on a single Basic target capital level, reflecting 100  
11 percent MCT ratio.

12 This Board approved the proposed plan,  
13 including the target 100 percent MCT ratio, on a  
14 temporary two (2) year basis in Order 176/'19.

15 In the following two (2) years, the  
16 COVID-19 pandemic caused vast worldwide changes, which  
17 continue to impact financial markets and collision  
18 claims and costs today.

19 From MPI's perspective, the COVID-19  
20 pandemic revealed flaws in the CMP model, as the  
21 Corporation was unable to quickly return significant  
22 capital that was accrued over a short period of time.

23 The RSR balance has grown steadily over  
24 the last decade. From reserves of \$154 million, in  
25 the 2009/2010 year, to reserves of \$448 million, in

1 the 2021/'22 year.

2 Accommodating for implications of the  
3 recently instigated Bill 45 -- excuse me -- MPI is  
4 forecasting that the reserves balance will increase to  
5 over \$500 million before any rebate can be issued to  
6 customers. This will represent over a three-fold  
7 increase in the reserves balance over the last decade.

8 Based on the Corporation's historical  
9 pattern, CMMG submits it's safe to say that where a  
10 target range exists, we can expect the RSR balance to  
11 linger up against the maximum target.

12 In the last decade, whether this Board  
13 had approved a target range with a minimum and maximum  
14 level or a single target, the RSR balance tended to  
15 float at or below the maximum target.

16 Over the same period, the RSR has only  
17 dipped below the minimum range on three (3) occasions,  
18 with two (2) of those occasions occurring in years  
19 where the Board approved a minimum target that was  
20 higher than the previous year's maximum target.

21 What CMMG observes is a Crown monopoly  
22 with a consistently growing reserves cushion. Recent  
23 legislative changes paved the way for MPI to balloon  
24 that cushion up to \$500 million, and coupled with this  
25 ever increasing reserves balance is a statutory scheme

1 with an optional mechanism for granting rebates to  
2 customers.

3 MPI has been vague and contradictory in  
4 their explanation of the parameters by which they will  
5 determine if a rebate application will be brought  
6 before this Board.

7 In CMMG's view, this statutory scheme  
8 frustrates the oversight role of PUB as it pertains to  
9 rebating funds to customers.

10 The PUB exists to examine the decisions  
11 of MPI as a Crown monopoly. This legislative change  
12 has the affect of inverting the roles of the Crown  
13 monopoly and the Board. Rather than MPI having an  
14 obligation to bring an application based on a specific  
15 set of factors, the Corporation may, at its own  
16 discretion, forego an application altogether.

17 The result is that the Corporation  
18 decision -- sorry, the result is that the Corporation  
19 decision -- Corporation's decision not to apply for a  
20 rebate can proceed without an examination from this  
21 Board of the reasonableness of that decision and the  
22 ability to vary that proposal where it is deemed  
23 unreasonable.

24 CMMG makes the following  
25 recommendations in these regards:

1                   That the PUB make a finding that the  
2 Corporation's listed parameters upon which they will  
3 bring an application for rebate are vague and  
4 undefined. And that MPI be directed to provide a  
5 detailed report in the 2024 GRA, outlining the factors  
6 that MPI can rely on when making a decision to forego  
7 a rebate application in the future.

8                   Now I'd like to move on to a discussion  
9 of ratemaking methodology and the implications of the  
10 large vehicle study.

11                   During the Road Safety Technical  
12 Conference, held in May of 2022, the Corporation  
13 provided the results of a large vehicle study, which  
14 was ordered by this Board to be completed by MPI.

15                   The study was recommended by Bike  
16 Winnipeg, with a view to examining the damage that is  
17 caused by large vehicles on the Road.

18                   While the study was completed from a  
19 road safety perspective, it raises questions about  
20 whether the Corporation's current methodology  
21 adequately addresses the issue of damage caused by  
22 large vehicles on the road.

23                   MPI made the following findings from  
24 the large vehicle study. First, that vehicle size has  
25 an impact on collision claims cost, with larger

1 vehicle segments consistently having higher collision;  
2 pickup trucks, mid and full size cars, and passenger  
3 and cargo vans all had higher incident cost, higher  
4 injury cost, and higher vulnerable road user costs  
5 than compact cars.

6 Third, SUVs had a higher average  
7 incident and physical damage cost than compact cars,  
8 while injury costs for SUVs were consistent with those  
9 for a compact car, both overall and for vulnerability.

10 What's compounded with this -- these  
11 results is the finding that heavy vehicles, pickup  
12 trucks, and passenger or cargo vans also have a higher  
13 likelihood of being at fault in an accident.

14 Despite these different findings, the  
15 Corporation has taken the position that no further  
16 action or research is necessary on the issue of  
17 vehicle size as it relates to road safety. And  
18 because of the methodology used in the study, that the  
19 results do not transfer well to a discussion regarding  
20 ratemaking methodology.

21 Included in MPI's ratemaking  
22 methodology is the use of clear rating groups. The  
23 intention of the clear rating is to provide incentives  
24 to customers who purchase vehicles which are deemed  
25 safer or less susceptible to damage or more resistant

1 to theft.

2                   In this system, each vehicle is  
3 assigned a rating which, based on different features  
4 of the vehicles, may increase or reduce the rating of  
5 that vehicle, which in turn will increase or reduce  
6 the insurance premiums charged for that vehicle.

7                   For example, a vehicle which has anti-  
8 lock brakes, dual inside air bags, side impact door  
9 reinforcements, or anti-theft devices would have lower  
10 CLEAR rating, and, therefore, lower insurance  
11 premiums.

12                   A CLEAR rating does not account for  
13 third-party bodily injury claims. As acknowledged by  
14 Ms. Low on cross-examination, a feature of a vehicle  
15 which contributes to a lower CLEAR rating -- and,  
16 consequently, lower insurance premium -- might also be  
17 a feature that increases the potential third-party  
18 bodily injury costs in the event of a collision.

19                   Pursuant to Board Order 97/'05, the  
20 Corporation uses the following claims cost allocation  
21 methodology.

22                   In any accident involving only MPI  
23 insured vehicles, one or more, and no other insured  
24 party, total PIPP costs are to be allocated equally  
25 per vehicle across the rating categories to which

1 those vehicles belong.

2                   Secondly, in any accident involving one  
3 or more MPI insured vehicles and one or more  
4 unidentified hit-and-run offenders or another injured  
5 party or parties, 50 percent of the total PIPP costs  
6 are allocated equally per MPI insured vehicle across  
7 the rating categories to which the MPI vehicles  
8 belong. And the remaining 50 percent of total PIPP  
9 costs would be effectively allocated across all  
10 vehicle rating categories.

11                   On cross-examination, Ms. Low  
12 acknowledged that, while this allocation methodology  
13 transfers PIPP costs between major classes, it does  
14 not transfer costs between vehicles within those major  
15 classes.

16                   As a result, the vehicle size  
17 difference within major classes is not considered in  
18 the ratemaking methodology employed by MPI. And  
19 through the use of the CLEAR rating system, features  
20 which may cause more damage may also be features which  
21 discount the insurance premiums for that vehicle.

22                   Ms. Low confirmed that MPI has no plans  
23 to examine the issue of vehicle size as it pertains to  
24 the rating structure and that MPI does not currently  
25 have vehicle rating groups for third-party bodily

1 injury claims.

2                   During re-direct examination with Mr.  
3 Guerra, Ms. Low indicated that the decision not to  
4 have rating group, the third-party bodily injury  
5 claims, was because it's impossible to do so and she's  
6 never heard of a fair rate group for third-party  
7 liability bodily injury.

8                   CMMG questions the accuracy of these  
9 statements and believes that further examination  
10 should be undertaken.

11                   In that regards, CMMG makes the  
12 following recommendations:

13                   In the 2024 GRA, MPI would report on  
14 any Canadian jurisdictions or American private  
15 insurers, where vehicle insurance providers have a  
16 rating group for third-party liability.

17                   Secondly, that PUB direct MPI to  
18 collaborate with CMMG and Bike Winnipeg regarding the  
19 methodology fo the large vehicle study and provide a  
20 report in the 2024 GRA, which provides as follows:

21                   Firstly, that the recommendations --  
22 firstly, provides the recommendations from each  
23 stakeholder for improvements and/or additions to the  
24 large vehicle study and, secondly, MPI's anticipated  
25 time line for completion of a further study,

1 incorporating the recommendations from CMMG and Bike  
2 Winnipeg, should the PUB order MPI to proceed with  
3 that study.

4                   Finally, I'd like to talk about the  
5 issue of road safety. CMMG is a active participant in  
6 other stakeholder engagement opportunities outside  
7 this GRA process.

8                   As well as participating in the Road  
9 Safety Technical Conference, CMMG is also engaged with  
10 external stakeholder committee and regularly engages  
11 with them -- directly with MPI, outside of the GRA  
12 process, to collaborate on and discuss Road Safety  
13 Planning and Strategy.

14                   Of particular concern for CMMG, is the  
15 issue of single vehicle accidents for motorcyclists.  
16 These types of collisions make up over 50 percent of  
17 total collisions for motorcycles over the last three  
18 (3) years.

19                   While these collisions are  
20 characterized as single vehicle collisions, CMMG  
21 raised concerns at the Road Safety Conference, that  
22 this data may not convey the true circumstances of the  
23 collision.

24                   Specifically, there may be  
25 circumstances where a motorcyclist is, in fact,

1 avoiding a collision caused by another vehicle which  
2 forces them off their bike or off the road. Despite  
3 not being at fault, the motorcycle class incurs the  
4 loss for that collision in terms of ratemaking.

5 For the anticipated implementation of  
6 MPI's publicly available dashboard, CMMG hopes to have  
7 the opportunity to review data and provide feedback to  
8 MPI for information that may be useful to address this  
9 concern.

10 During cross-examination, CMMG reviewed  
11 the methodology and under -- underlying the large  
12 vehicle study. CMMG rate concerns regarding Bike  
13 Winnipeg's request to be included in the development  
14 of the study which was rejected by the Corporation.

15 During the Road Safety Technical  
16 Conference and during this GRA, Mr. Triggs, on several  
17 occasions, suggested that Road Safety is best  
18 addressed through collaboration between stakeholders  
19 and MPI, rather than through this GRA process.

20 Unfortunately, when provided an  
21 opportunity to partake in that collaboration with an  
22 interested Intervener, MPI fell far short.

23 As a result, the large vehicle study  
24 fails to provide some basic data that stakeholders  
25 would find useful. CMMG hopes to see MPI follow

1 through on its assertion that collaboration with  
2 stakeholders is an integral part of the road safety  
3 process.

4           While CMMG believes that MPI fell short  
5 as it relates to a large vehicle study, CMMG does  
6 acknowledge that there have been other circumstances  
7 where MPI has been responsive in engaging stakeholders  
8 on other Road Safety issues.

9           In particular, CMMG would like to  
10 commend MPI on the quick response, following the loss  
11 of Mr. Denis L'Heureux. CMMG appreciates the open  
12 dialogue with CMMG (sic) in facilitating collaboration  
13 and communication with other parties or stakeholders  
14 to address the safety issue arising from this tragic  
15 event.

16           In conclusion, CMMG would like to thank  
17 the Board for the opportunity to intervene in this  
18 General Rate Application and looks forward to receipt  
19 of the Board's Order.

20           CMMG would also like to extend that  
21 appreciation to MPI, all the people working in the  
22 background at MPI. We appreciate the work that they  
23 do to make this application as seamless as possible.

24           And I would also like to thank the  
25 Board and Board Staff for everything that they do in

1 assisting Interveners throughout this process.

2 Subject to any questions, that concludes the

3 submissions of CMMG.

4 THE PANEL CHAIRPERSON: Thank you, Ms.

5 Meek. Ms. Nemec...?

6 BOARD MEMBER NEMEC: Thank you. I

7 just want to clarify something on page 18. You

8 mentioned as a result of vehicle size difference with

9 major classes is not considered a rate-making

10 methodology employed by MPI.

11 And later you mentioned that, in your

12 recommendations, that in the 2024 GRA, MPI report on

13 Canadian jurisdictions or American private insurers

14 where vehicle insurance providers have rating groups

15 for third-party liability.

16 And -- and, I guess my question,

17 initially was, and then I saw your recommendation, so

18 I just wanted some clarity.

19 Do you know of anywhere where they do

20 ratemake -- the rate-making methodology does include

21 the issue of vehicle size?

22 MS. CHARLOTTE MEEK: Am I aware of any

23 jurisdictions where it does? I -- I believe --

24 obviously, this isn't from my own research, but my

25 contacts, that there's some private insurers in the

1 States in -- in America that have bodily injury --  
2 third-party bodily injury as a rate -- rating group.

3 THE PANEL CHAIRPERSON: Mr. Bass...?  
4 Ms. Boulter...?

5 Thank you, Ms. Meek. Ms. Wittman ...?

6

7 CLOSING COMMENTS BY TAXI COALITION:

8 MS. KAREN WITTMAN: Thank you, Madam  
9 Chair. For the record, Karen Wittman appearing on  
10 behalf of the Taxi Coalition.

11 And, I would like to begin by thanking  
12 the Board on behalf of the Taxi Coalition, the  
13 opportunity to participate in this year's GRA and to  
14 provide submissions in closing.

15 The Board should have before it, a -- a  
16 copy of our written submission. We'd like to mark  
17 that as Exhibit TC-8.

18

19 --- EXHIBIT NO. TC-8: Taxi Coalition Submission

20

21 MS. KAREN WITTMAN: I don't intend to  
22 read the submission to you, but to provide you with a  
23 -- a general overview of the contents of the  
24 submission and to focus the -- our remarks on the four  
25 (4) key areas that were of most interest to the Taxi

1 Coalition.

2                   And those areas are: the Ratemaking and  
3 Serious Loss Loading, the Vehicle for Hire Framework,  
4 the DSR System and the proposed changes to the Capital  
5 Management Plan.

6                   So, with respect to the first issue,  
7 ratemaking and serious loss loading, over -- beginning  
8 by reminding the Board that serious losses refer to  
9 losses where total PIPP claims exceed five hundred  
10 thousand (500,000).

11                   Now, the approach that MPI's taken to  
12 ratemaking and serious loss loading has been an issue  
13 in the past and it continues to be an issue in this  
14 year's GRA for the Taxi Coalition.

15                   Traditionally, MPI only includes  
16 serious loss loading to insurance uses that have  
17 actual serious losses in the last ten (10) years.  
18 What this means, is that for any use or territory,  
19 which does not have serious losses in the last ten  
20 (10) years, MPI does not include any serious loss  
21 loading in the expected claims in the rating year.

22                   The Passenger Vehicle for Hire is an  
23 example of an insurance use that does not have serious  
24 loss loading; more specifically, because it was only  
25 introduced into -- as a class in 2018, that it did not

1 yet have a ten (10) year history of serious losses.

2                   Consequently, under MPI's methodology,  
3 no serious losses are applied to it. The Taxi  
4 Coalition challenged that approach last year. The  
5 Taxi Coalition took the position, that the mere  
6 absence of a serious loss in a particular insurance  
7 use in the past ten (10) years, was not a reliable  
8 indicator of whether that particular insurance use was  
9 free of risk of serious loss.

10                   Further, by failing to include any  
11 serious loss loading, MPI was increasing the  
12 likelihood of future rate volatility as a result of  
13 serious loss loading being added once there was a  
14 loss.

15                   Following last year's GRA, the Board  
16 directed MPI to file an alternative rate indication  
17 taking into consideration serious loss loading and  
18 this was set out in Directive 11.3.

19                   The calculation to be completed by MPI  
20 was further clarified in the information request in  
21 PUB-MPI-1-8(D). We refer to this in our written  
22 submission and today, as the alternative -- sorry, the  
23 alternate serious loss loading calculation.

24                   Now MPI has complied with that  
25 directive and produced ratemaking appendix 12 and in

1 addition to that, they've also produced a response to  
2 PUB-MPI-1-8(D) with an addendum to the rate-making  
3 appendix, which sets out further revised calculations.

4           Despite putting together these  
5 calculations, it is still not clear whether MPI  
6 intends to adopt a revised serious loss loading  
7 methodology. In written materials, MPI suggested that  
8 they would not, but, then, during the course of the  
9 hearing, passing reference was made to the possibility  
10 that MPI would look at this in the future.

11           The Taxi Coalition, therefore, says  
12 that MPI should be directed to revise its rate-making  
13 methodology to include serious loss loading for all  
14 insurance uses that do not have a serious loss  
15 experience in the last 10 years, including the  
16 passenger Vehicle for Hire use.

17           And we say this for three (3) reasons.  
18 First, it's clear that MPI's current methodology has a  
19 number of limitations and weaknesses. Again, under  
20 the current methodology, the serious losses are only  
21 included where there has been a serious loss in the  
22 last 10 years. If there is no serious loss, then the  
23 serious loss is reduced to zero.

24           The problem with that, however, and, as  
25 was reviewed with MPI during cross-examination, is

1 that, well, they're reducing the loss to zero only  
2 because 10 years have passed and not because anything  
3 in the actual risk profile has changed.

4           For example, MPI was taken to the  
5 Pleasure Motorhome insurance use. Currently, that  
6 insurance use has a serious loss load of twenty-seven  
7 thousand eight hundred -- eight hundred dollars  
8 (\$27,800) based on a loss in 2012.

9           Next year, however, that will be  
10 reduced to zero. MPI admitted, during the cross-  
11 examination, that there is nothing in the insurance  
12 profile that has changed that reduces the risk, except  
13 that one (1) year will have passed.

14           The same thing is shown in the  
15 Petroleum Chemical Truck insurance use. Last year,  
16 that reflected a serious loss load, based on a serious  
17 loss of six hundred and ninety-seven thousand  
18 (697,000) that occurred in 2011.

19           This year, the serious loss is reduced  
20 to zero but the risk of serious loss has not changed  
21 dramatically from last year to the current. So, there  
22 is not, in other words, in the Taxi Coalition's  
23 submission, a justification for the removal of the  
24 serious loss loading, other than another year has  
25 passed.

1                   That's one (1) weakness in the current  
2 methodology but there's more. There's also weakness  
3 in MPI's methodology with respect to insurance uses  
4 that are small in size and have no historical  
5 experience.

6                   The issue here is the -- the  
7 credibility and the reliability of the data. MPI says  
8 that it considers insurance uses with 10 years of data  
9 and no historical losses to be statistically credible,  
10 if they have a large exposure base and it's the "if  
11 they have the large exposure base" that's the key  
12 because MPI acknowledged, during cross-examination,  
13 that not all insurance uses have a large exposure  
14 base.

15                   They further acknowledge that the data  
16 becomes less reliable -- less reliable and not fully  
17 credible, when the exposure base is small. At that  
18 point, it becomes more difficult to predict which  
19 group is more prone to serious losses or just had bad  
20 luck one (1) year.

21                   These same limitations also apply to  
22 insurance uses that are new uses and do not have ten  
23 (10) years of experience in serious losses. So, in  
24 other words, the current methodology has its  
25 limitations.

1                   The second point the Taxi Coalition  
2 wishes to make on this is that the Board's alternative  
3 approach to calculating serious loss loading is  
4 preferable. MPI was cross-examined on this issue and,  
5 during the cross-examination, MPI admitted that the  
6 alternative method helps spread out serious losses for  
7 insurance uses that are smaller in size.

8                   The alternative method also helps  
9 spread out serious losses for new insurance uses that  
10 have no historical experience. The alternative method  
11 also may result in less volatility for some insurance  
12 uses.

13                   This now brings us to the third issue,  
14 which is not only is the Board's alternative approach  
15 preferable but MPI has now done all of the work that  
16 it needs to do in order to adopt this approach.

17                   MPI was specifically asked about this  
18 at the hearing and it acknowledged that the work was  
19 done and it further acknowledged that it would not  
20 require a significant effort on its part to adopt the  
21 serious loss loading methodology proposed by the PUB.

22                   So, the Taxi Coalition, therefore,  
23 recommends that MPI be directed to adopt the alternate  
24 serious loss loading approach proposed by the Board,  
25 at last year's hearing.

1                   The second issue we'd like to address  
2 is the Vehicle for Hire framework. Now, as the Board  
3 is well aware, the Vehicle for Hire insurance model  
4 remains relatively new, having only been intro --  
5 introduced on March 1st, 2018.

6                   The initial framework was based on a  
7 time band model, which involved the creation of four  
8 (4) separate time bands that corresponded to certain  
9 hours of the day. Vehicle for Hire operators were  
10 given the option of choosing to register for up to  
11 four (4) time bands, and the premiums charged  
12 corresponded to the number of time bands selected by  
13 the Vehicle for Hire operator.

14                   At the last GRA, it was acknowledged by  
15 pretty much all Vehicle for Hire operators that the  
16 time band model didn't really work for their business  
17 model and needed to be changed. It didn't work for  
18 the passenger Vehicle for Hire group because they  
19 needed to select all four (4) time bands because they  
20 needed to have flexibility in their driving, they  
21 needed the ability to work part-time or any day of the  
22 week.

23                   It also didn't work for the majority of  
24 public for hire vehic -- public Vehicle for Hires,  
25 including taxi, limo, and accessible Vehicle for

1 Hires, because the way the time bands were set up,  
2 they did not work with their business operations.

3           So, following last year's GRA, MPI  
4 committed to completing a review of -- of the existing  
5 framework and to develop a new model. Unfortunately,  
6 the introduction of the new Vehicle for Hire framework  
7 has been postponed until next year.

8           MPI has, however, provided an outline,  
9 in broad strokes, of the approach it take -- intends  
10 to take to the new framework. One (1) of the key  
11 components of the new framework is that the current  
12 time band model will be eliminated and replaced with  
13 two (2) Vehicle for Hire products: the blanket policy  
14 and the full-time Vehicle for Hire insurance.

15           What we heard about the blanket policy  
16 is that it would be mandatory for all Transportation  
17 Network Companies or TNCs and it will also be  
18 available to other Vehicle for Hire dispatchers who  
19 meet the requirements.

20           How it works is that the dispatcher  
21 would provide insurance coverage for the ride-sharing  
22 portion of the use of the vehicle and the non-ride  
23 sharing periods would be covered by the TNC drivers  
24 registered owner's policy, which must be maintained by  
25 the driver.

1                   Although MPI has not yet finalized the  
2 pricing and rating structure, one (1) of the main  
3 attributes will be that there will be a single  
4 starting rate for all Vehicle for Hire dispatchers or  
5 TNCs and, then, at policy year end, MPI will finalize  
6 the premiums, based on actual kilometres travelled and  
7 actual claims experience and will, then, use a rebate  
8 surcharge -- surcharge scale to determine whether a  
9 rebate or surcharge is required and, if so, the amount  
10 of the rebate or surcharge. MPI will, then, collect  
11 any outstanding premiums or issue a refund, if there  
12 is a surplus.

13                   For the full-time Vehicle for Hire  
14 insurance, this is a product that will be made  
15 available to all taxi Vehicle for Hire and limousine  
16 Vehicle for Hire and accessible Vehicle for Hire  
17 groups.

18                   As it stands right now, when the time  
19 band model is removed, any taxis currently operating  
20 on a less than full-time basis, will be required to  
21 register for full-time insurance.

22                   Now, we heard, during the course of the  
23 hearing that MPI may develop a part-time option for  
24 taxis but nothing has really been done on that and, as  
25 far as we're concerned, it -- there has been no clear

1 commitment to do that. There are, however, a number  
2 of taxis that are currently operating part time. Now,  
3 that number is less than 10 percent but the surveys  
4 that were taken show that there are more that would  
5 like to operate part time, if it wasn't under the time  
6 band model, which doesn't really work for them.

7           It's as many as 20 percent of the taxis  
8 would like a part-time option. One (1) of the things  
9 that MPI was asked, during the course of the hearing,  
10 was what the financial impact of moving part-time  
11 taxis to full time would be, and the answer is set out  
12 in Undertaking Number 26, which I believe is marked as  
13 Exhibit MPI-105, and the increase in premiums will  
14 range, according to that exhibit, from nine hundred  
15 and five dollars (\$905) to as much as five thousand  
16 five hundred and sixty-one dollars (\$5,561).

17

18   (BRIEF PAUSE)

19

20                           MS. KAREN WITTMAN:    So, based on the  
21 information that's been presented on -- both on the  
22 written application and during the course of the  
23 hearing, the Taxi Coalition says that there are three  
24 (3) issues that need to be addressed with respect to  
25 the new Vehicle for Hire framework.

1                   The first is whether MPI should be  
2 required to ensure that there is no cross-  
3 subsidization for rebates under the blanket policy.  
4 When the Vehicle for Hire framework was first  
5 introduced in 2018, one (1) of the underlying  
6 principles was that there would be no cross-  
7 subsidization between Vehicle for Hire and other  
8 insurance use -- uses.

9                   This principle was reflected in MPI's  
10 own interim application and it was also reflected in  
11 the Board's Order 11/'18. So although MPI has not yet  
12 finalized the pricing and rating structure for the new  
13 blanket policy, we note that in a number of important  
14 respects, it would appear that the blanket policy is  
15 going to operate very similarly to the existing Fleet  
16 Rebate Program.

17                   Under the current Fleet Rebate Program,  
18 the source of the funds for the rebates comes from all  
19 private, commercial, and public major class customers.  
20 In other words, all private, commercial, and public  
21 major class customers fund or subsidize the Fleet  
22 Program even though the rebates are only paid to  
23 owners participating in the Fleet Program.

24                   MPI was asked during the Information  
25 Requests how the blanket policy will be funded and

1 MPI's response was, that level of detail is still  
2 unknown.

3 MPI confirmed, however, that cross-  
4 subsidization of a blanket policy by the broader fleet  
5 in Manitoba should, on a principle basis, be avoided,  
6 and we agree.

7 So consequently, and although MPI does  
8 not yet know how the funding for the net rebate under  
9 the proposed blanket policy would be payable, the Taxi  
10 Coalition recommends that MPI should be directed to  
11 ensure that there is no cross-subsidization of any  
12 rebates payable under the blanket policy.

13

14 (BRIEF PAUSE)

15

16 MS. KAREN WITTMAN: The second issue  
17 with respect to the Vehicle for Hire framework is  
18 whether MPI should be directed to reduce barriers to  
19 blanket policy participation for all Vehicle for Hire  
20 dispatchers.

21 One (1) of the positive features of the  
22 Fleet Program is that customers are incentivized to  
23 drive carefully in order to receive a rebate or avoid  
24 a surcharge.

25 The owners of the fleets are also

1 encouraged or incentivized to manage their employees  
2 driving habits. Given the similarities between the  
3 Fleet Program and the Blanket Policy, the Taxi  
4 Coalition expects that the Blanket Policy is going to  
5 -- will help incentivize drivers to drive more  
6 carefully, which would be a benefit to everyone.

7           The Taxi Coalition would like to see  
8 this positive feature, the Fleet Program, being made  
9 available to all Vehicle for Hire dispa --  
10 dispatchers. It would provide prompt feedback by way  
11 of a surcharge or a rebate on an annual basis and  
12 would help improve claims experience.

13           Unfortunately, the Taxi Vehicle for  
14 Hire don't currently have the technology necessary to  
15 participate in the blanket policy. And the Taxi  
16 Coalition asked during the Information Requests  
17 whether MPI was aware of any products that were  
18 available in the market that would provide the  
19 technology to support this insurance product.

20           MPI responded that it was not aware of  
21 any, but MPI did agree to participate in a Telematics  
22 pilot project with the taxis. It is expected that  
23 much of the information that will be obtained as part  
24 of this Telemat -- Telematics Project would be useful  
25 for helping Taxi Vehicle for Hire participate in the

1 blanket policy.

2                   And therefore, the Taxi Coalition  
3 recommends that the Board direct MPI to work with the  
4 Taxi Coalition to set up the technology required to  
5 record trip data for use with the blanket policy.

6

7                                   (BRIEF PAUSE)

8

9                   MS. KAREN WITTMAN:    The third issue  
10 with respect to the Vehicle for Hire framework is  
11 whether the Board should direct MPI to offer a  
12 reasonably priced part-time option for Taxi Vehicle  
13 for Hire.

14                   Now, under the proposed blanket policy,  
15 TNC drivers would be permitted to drive part-time if  
16 they wanted, without any restrictions on part-time  
17 hours. And currently taxis operating under the time  
18 band model can work part-time if they want.

19                   As mentioned a moment ago, surveys  
20 conducted confirm that as many as 20 percent of -- of  
21 taxis would like the part-time option, if the part-  
22 time hours are closely aligned with their business  
23 model.

24                   The Taxi Coalition has requested that  
25 MPI provide a part-time model that captures part-time

1 taxi operations during a certain defined period of  
2 hours. But to date, MPI has taken the position that a  
3 part-time option cannot be made available for Taxi  
4 Vehicle for Hire, largely for two (2) reasons.

5 First, MPI says that it cannot provide  
6 a discount to part-time taxis unless full-time taxis  
7 pay an increase premium to make up the difference.

8 Second, MPI says that it cannot  
9 consider a part-time option that does not collect the  
10 difference in premium from full-time operators until  
11 it has the data confirming that taxis that are on the  
12 road less have fewer accidents.

13

14 (BRIEF PAUSE)

15

16 MS. KAREN WITTMAN: The Taxi Coalition  
17 says that there's a number of flaws in MPI's position.  
18 First, it already exists this way right now. This  
19 model was introduced in 2018 and under this model the  
20 drivers are already permitted to register for less  
21 than four (4) full-time bands. And if they do, they  
22 pay a reduced premium.

23 This is available not just to  
24 passenger Vehicle for Hire, but also for taxis and all  
25 Vehicle for Hire groups. And full-time taxis are not

1 being asked to make up the difference.

2                   Second, the requirement that MPI must  
3 have data to consider a reduced rate is inconsistent  
4 with the approach that MPI has taken in other  
5 circumstances. Let me provide the Board with a couple  
6 of examples.

7                   First, when the time band model was  
8 introduced it included a part-time option even though  
9 MPI did not have the data about passenger Vehicle for  
10 Hire experience, for the obvious reason that it was a  
11 brand new insurance class.

12                   And it also didn't have the data on  
13 taxi part-time operations, because as far as MPI was  
14 aware at the time, taxis were operating 24/7. In  
15 other words, MPI did not have the data to support the  
16 idea that drivers who were on the road less had a  
17 reduced risk of collision that would support a reduced  
18 premium.

19                   Yet despite the absence of actual data,  
20 MPI, nevertheless, agreed to make a judgmental  
21 decision that drivers who were driving reduced hours  
22 had a reduced risk of pre -- of collision and provided  
23 them with a reduced premium.

24

25                   (BRIEF PAUSE)

1 MS. KAREN WITTMAN: That's one (1)  
2 example. Here's a second, which is the work-from-home  
3 adjustment that MPI is going to include in this year's  
4 pricing, and -- and specifically, that's a 5 percent  
5 reduction in frequency for collision, property damage,  
6 weekly indemnity, and ABO-3 index claims.

7 The 5 percent reduction is based, in  
8 part, on the experience through the pandemic but also,  
9 significantly, on the surveyed intentions of drivers  
10 with respect to their future work-from-home  
11 intentions.

12 In other words, drivers have told MPI  
13 that they intend to work from home and MPI has  
14 accepted the results of that survey. What's  
15 significant, though, is that is -- this is based on a  
16 stated intention. It's not data.

17 In other words, it's on what the  
18 drivers say they're going to do, but a driver's stated  
19 intention is not the same as actual data and neither  
20 MPI nor the drivers themselves yet know whether the  
21 drivers will, in fact, actually work from home or even  
22 be permitted to do so by their employers. Yet,  
23 despite this lack of data, MPI has agreed to adjust  
24 the rates.

25 Third, and perhaps most importantly,

1 MPI actually has data right now that says when taxis  
2 are on the road less, they have fewer collisions.

3 In the rate-making chapter, at  
4 ratemaking Appendix 9, table 8, it shows that the  
5 actual losses for Taxi Vehicle for Hire across  
6 Manitoba from 2017 to 2019 were close to 4 million.

7 2021 -- 2020 to 2021, the actual losses  
8 were reduced to approximately 2.5 million. In other  
9 words, MPI already has the data, which confirms that  
10 when Taxi Vehicle for Hire are on the road less, there  
11 was a corresponding reduction in collision frequency.

12

13 (BRIEF PAUSE)

14

15 MS. KAREN WITTMAN: The Taxi Coalition  
16 says that MPI must remain fair and equitable in its  
17 approach to full-time Vehicle for Hire insurance.

18 MPI ought not to be permitted to pick  
19 and choose which insurance uses require data to  
20 support the -- its pricing decisions and which do not.

21 If MPI would be giving a reduction or a  
22 discount to one (1) group, based on the fact that that  
23 particular group was driving less, MPI should also  
24 ensure that a similar discount to a second group, if  
25 the second group is also driving less, is given in

1 order to remain fair and equitable.

2                   During the course of the hearing, the  
3 Taxi Coalition prepared, based on MPI's own  
4 methodology used to price the time band model, a part-  
5 time taxi Vehicle for Hire policy for Winnipeg. It  
6 was reviewed during cross-examination and is attached  
7 as an appendix to the written submission that the Taxi  
8 Coalition has provided.

9                   Now, MPI took issue with the  
10 methodology during re-direct, suggesting that this was  
11 not a method that MPI would adopt. But the problem is  
12 it's based on MPI's own methodology in the first  
13 place, and it was -- and it's the meth -- sorry, it's  
14 the very same methodology that is currently in use  
15 right now, and it was previously approved by the  
16 Board.

17                   So the bottom line is, that methodology  
18 is there. It's available to be used by MPI. It's  
19 simply an adjustment in the configuration, and it  
20 would be a very useful tool to implement an approach  
21 for a part-time model for taxis. The data from the  
22 Telematics project - which we understand will be  
23 forthcoming - can then be used to adjust the rates, if  
24 necessary.

25                   The essence here is that the Taxi

1 Coalition submits that a part-time should be made  
2 available to them, and it should be reasonably priced.  
3 Ideally, it would be based on the model that the Taxi  
4 Coalition has presented, but at a bare minimum, it  
5 should be available and it should be reasonably  
6 priced.

7                   So in short then, what the Taxi  
8 Coalition is seeking with respect to Vehicle for Hire  
9 is that MPI should be directed to (1) ensure that  
10 there is no cross-subsidization of the rebates payable  
11 under the blanket policy, (2) to require that MPI work  
12 with the Taxi Coalition to reduce barriers to  
13 participation in the blanket policy for all Vehicle  
14 for Hire Dispatchers, and (3rd) to include a properly  
15 priced part-time option similar to the one outlined by  
16 the Taxi Coalition in the appendix, with the  
17 expectation that pricing can be updated based on  
18 actual data from the Telematics project.

19                   The third issue that we'd like to  
20 address is Driver Safety Rating and the DSR scale.  
21 Now, this has been covered fairly comprehensively  
22 already, so we will be relatively brief. But the  
23 essence of the issue is that, at least for the past  
24 three (3) GRAs, if not longer, it's been recognized  
25 that there is considerable cross-subsidization within

1 the DSR system.

2 Further, the magnitude of vehicle  
3 premium discounts provided at each DSR level is not  
4 actuarially based. In this year's GRA, MPI prepared  
5 an actuarial review that confirms that signi --  
6 significant cross-subsidization continues.

7 And to remedy this cross-subsidization,  
8 MPI has adopted an approach that will "incrementally  
9 adjust DSR levels." And by 'incrementally', it would  
10 appear that MPI means 'slowly'.

11 As we understand it, part of MPI's  
12 rationale for the slow pace of the reduction of the  
13 cross-subsidization is that (1) it wants to avoid rate  
14 shock or avoid increasing base rates, and (2) it also  
15 wants to wait until after it has adopted the new GLM -  
16 - Generalized Linear Model -- before making any  
17 significant adjustments to the DSR.

18 The Taxi Coalition has a number of  
19 points to make in response, and those are set out in  
20 full detail in the brief, but we're going to highlight  
21 two (2) of them here.

22 The first is that the incremental  
23 approach is not in line with Board Directive 11.5 --  
24 11-15. That directive is set out at page 21 of our  
25 written submission, and it says that:

1 "In the 2023 GRA, the Corporation  
2 shall bring forward a DSR transition  
3 plan to manage the required increase  
4 in the base rate and year-to-year  
5 rate dislocation while moving the  
6 DSR vehicle discounts and driver  
7 premiums to actuarial targets in a  
8 timely manner."

9 And the key part of that phrase is "in  
10 a timely manner."

11 We say that taking incre -- incremental  
12 steps hardly meets the requirement of 'a timely  
13 manner', and certainly a proposal that's been put  
14 forward in this year's GRA is not going to move us  
15 there in a timely manner.

16 The second issue is the GLMs. MPI was  
17 cross-examined by PUB counsel on this issue, and that  
18 portion of that cross-examination has been included in  
19 our written submission at page 24.

20 And Ms. Low responded in response to  
21 questions being asked by PUB counsel is that:

22 "There are two (2) issues that we  
23 [being MPI] are currently dealing  
24 with. First, we talked about the  
25 other -- we talked about the other

1 day at the ratemaking panel, we are  
2 going to be running generalized  
3 linear models over the next couple  
4 of -- of days -- or couple of years,  
5 I should say.  
6 So these are called GLM models.  
7 We're going to be putting DSR levels  
8 in there as a rating variable. That  
9 means what comes out of the model  
10 could be different than what we get  
11 right now with our minimum bias  
12 model, so really hard to figure out  
13 where we're going -- where we're  
14 going to get to the point when we  
15 don't know what the end point looks  
16 like yet."

17 Then in a subsequent exchange with MPI  
18 counsel, Ms. Low further explained:

19 "Because the DSR is going to become  
20 a rating variable, so it's not going  
21 to be a product sitting on top of a  
22 product. It's going to become a  
23 factor within the rating so the  
24 discount scale itself that's  
25 indicated might change with the

1 GLMs."

2 Then she further added:

3 "The downside is is you can maybe  
4 give a large decrease that you'll  
5 have to take back."

6 The Taxi Coalition notes that the  
7 current -- converse could be equally true:  
8 adjustments made today might also bring the DSR closer  
9 to the indicated rates under the GLM framework.

10 The problem is that MPI has said that  
11 they don't intend to bring a DSR adjustment plan to  
12 the Board until 2025, which is still a number of years  
13 away. So if these two (2) issues are linked, the Taxi  
14 Coalition then says that MPI should accelerate the  
15 work to develop a preliminary GLM model.

16 Taxi Coalition also notes that they  
17 already have the means available. This was canvassed  
18 with them at the last GRA, and it was noted that --  
19 that GLM models are publicly available. And even if  
20 MPI does not want to source open software that's  
21 readily available, there's no reason why they can't  
22 move more quickly to bring about a new GLM software.

23 Certainly, when MPI wanted to engage  
24 McKinsey this year, it did that relatively quickly, as  
25 pointed out by counsel for the CAC. There's really no

1 reason why MPI can't move as -- as quickly with the  
2 GLMs.

3 As it stands right now, MPI is still  
4 waiting to acquire the software to run GLMs a full  
5 year after it committed to transition to GLMs.

6

7 (BRIEF PAUSE)

8

9 MS. KAREN WITTMAN: So with respect to  
10 the DSR, the -- the Taxi Coalition says that the Board  
11 should find that MPI has not complied with Directive  
12 11-15 and -- and should have concerns about MPI's  
13 corporate risk -- sorry, and that any concerns about  
14 MPI's corporate risk profile are not determinative or  
15 even relevant to compliance with this directive.

16 Further, MPI should be directed to  
17 accelerate its preliminary investigation into GLMs to  
18 the point where it can sufficiently and with  
19 confidence in the outcome -- sorry -- it can be  
20 sufficiently confident in the outcome of the GLMs that  
21 it can then proceed with addressing the PUB's concerns  
22 as articulated in Directive 11-15.

23 Given that software options are already  
24 available, MPI should be directed to begin this  
25 investigation without further delay and be prepared to

1 present preliminary results in the 2024 GRA.

2

3

(BRIEF PAUSE)

4

5

MS. KAREN WITTMAN: This now brings us  
6 to the final issue which we wish to address, and  
7 that's the Capital Management Plan and the revisions  
8 that have been brought forward this year to the CMP.

9

The key changes to the CMP as explained  
10 during the course of the Hearing that appear to us are  
11 threefold. First, it involves a move to an MCT range  
12 instead of a single target with the lower threshold  
13 being at 100 percent MCT and an upper threshold of 120  
14 percent MCT.

15

Second, the replacement of the capital  
16 release provision with a capital rebate. A rebate  
17 would be initiated when the MCT exceeds 120 percent  
18 and the amount of the rebate would be the amount  
19 required to reduce MCT to a hundred percent. The  
20 capital build, however, would remain unchanged.

21

The third key change is that financial  
22 decisions regarding capital rebates would be based on  
23 audited actual year-end financial results instead of  
24 on the basis of forecasted results, or at least this  
25 is how it was explained during the course of the

1 Hearing.

2                   The proposed changes are also  
3 reflected, at least to a degree, in the Budget  
4 Implementation and Tax Statutes Amendment Act, or  
5 BITSA, and the relevant portion of which is reproduced  
6 at page 28 of our brief.

7

8                   (BRIEF PAUSE)

9

10                   MS. KAREN WITTMAN:   And we heard  
11 during the course of the Hearing that MPI has a number  
12 of reasons for wanting to make changes to the CMP.  
13 First, it says it wants to avoid continuous building  
14 or rebating as a result of constant changes in MCT,  
15 and it wants to avoid the cost of rebates for less  
16 than a hundred dollars.

17                   Second, MPI wants to move to capital  
18 rebates rather than releases to avoid customer  
19 confusion and to avoid allowing a new ratepayer to  
20 benefit from the prior buildup of excess capital.

21                   And third, MPI thinks that the new  
22 methodology is preferable because it will rely on  
23 actual audited year-end results rather than forecasts.

24                   The Taxi Coalition has several points  
25 to make in response. First, MPI -- it -- it's

1 MS. KAREN WITTMAN: And we point out  
2 here that there's confusion in MPI's written materials  
3 on how the move to actuals is going to be based  
4 because it says it's going to be based on the current  
5 fiscal year period, which is defined as, you know,  
6 March 31st, 2023, but it's not clear how that would be  
7 implemented in practice.

8 At page 14 of the RSR chapter, for  
9 example, MPI states that second dash point underneath:

10 "If the MCT is equal to or greater  
11 than 120 percent at the end of the  
12 forecasted current fiscal year-end,  
13 in other words, March 31st, 2023,  
14 then calculate the rebate amount so  
15 that the ending Basic MCT at the end  
16 of the forecasted current fiscal  
17 year [I think that should be] is  
18 equal to 100 percent.

19 The rebate will be applied for  
20 issued pending finalized audit of  
21 year-end financial values."

22 But on the very next page, page 15 of  
23 the RSR chapter, MPI appears to provide a different  
24 approach which is contrary to this explanation. More  
25 specifically, on page 15, MPI says that:

1                   "The decision of whether to apply  
2                   for a rebate would be based on the  
3                   forecasted MCT ratio during the  
4                   rating period."

5                   Which, if we use this GRA as an  
6                   example, would run from April 1st, 2023, to March  
7                   31st, 2025, rather than on the basis of the current  
8                   fiscal year period.

9                   There was also confusion or  
10                  contradiction in the oral evidence over the time  
11                  period for the applicable forecast. Ms. Low, for  
12                  example, appeared to indicate that there would be an  
13                  initial trigger of a potential rebate application  
14                  where actual audited financial statements indicate  
15                  that MCT exceed 120 percent whether a rebate would not  
16                  be applied for if MCT is forecasted to dip below a  
17                  hundred percent in the forecast period which, again,  
18                  we understand from the materials that were filed that  
19                  the forecast period means the rating period, which, in  
20                  other words, is two (2) years out.

21                  But if we look at the actual testimony  
22                  and turn to the next page, paragraph 103, during Ms.  
23                  Low's testimony and her examination by Mr. Scarfone,  
24                  she referred to forecasts of five (5) years out for  
25                  consideration of the rebates, which is the bolded

1 section in -- in our brief, and then further on again  
2 to the forecast period, but the forecast period is a  
3 defined term in this year's GRA.

4 But then in contrast to Ms. Low's  
5 evidence, we have Mr. Giesbrecht's evidence which  
6 suggests that any MCT forecasting would be a much  
7 shorter term. Beginning -- exactly right there --  
8 thank you, Ms. Schubert.

9 Beginning at paragraph 104 of our  
10 submission, he was asked specifically about that and  
11 said that it would be -- the forecasting would be  
12 based on audited actual year-end results. That's the  
13 first condition.

14 And then the second condition is that  
15 it is forecasted -- or MCT is forecasted to remain  
16 above a hundred percent throughout the rating period  
17 after the proposed rebate. And he's responded, "Yes,  
18 exactly." But then what he talked about was a three  
19 (3) month period. He said:

20 "And so, we would have three (3)  
21 months of actual results where there  
22 could be adverse development, such  
23 as inflation and a requirement to  
24 transfer or increase the reserves as  
25 a result."

1 He continues:

2 "And so, if that were to take place,  
3 and now, even though the year end  
4 was above 120 percent, you may have  
5 a scenario where you fall below.  
6 And we would not want to rebate if  
7 we were now because of amounts that  
8 happened after year end that were  
9 known or expected to happen in the  
10 very short term that could impact  
11 that outcome."

12 There's also inconsistencies in the  
13 parameters around -- not only in the parameters around  
14 forecasting, but also about whether MPI has sole  
15 discretion to determine when a rebate application will  
16 be brought. And whether it will be -- that decision  
17 will be dependent on whether MPI believes that MCT  
18 will fall below 100 percent.

19 In other words, MPI seems to be  
20 suggesting that not only is the rebate entirely within  
21 its discretion, but it also has discretion on how the  
22 rebate is calculated.

23 But MPI says that there are numerous  
24 factors within its control, which go into forecasting,  
25 that may have an ultimate impact on MCT.

1                   In other words, how the MCT itself is  
2 calculated is also discretionary.

3

4                   (BRIEF PAUSE)

5

6                   MS. KAREN WITTMAN:    The Taxi Coalition  
7 references that one (1) of the key issues with the  
8 proposed new CMP is the lack of clarity, lack of  
9 transparency, and accountability surrounding the  
10 approach to rebate application.

11                   The Taxi Coalition recommends that the  
12 Board should provide parameters or specifications with  
13 respect to the CMP specifically.

14                   The Taxi Coalition makes three (3)  
15 recommendations:   First, the Board should provide  
16 some direction with respect to Section 18(4)(d) of the  
17 new legislation.  And that is set out, I believe, at  
18 page -- paragraph above, 28.

19

20                   (BRIEF PAUSE)

21

22                   MS. KAREN WITTMAN:    So Section 18(4)  
23 states that:

24                                   "A rebate must not be paid from the  
25                                   Rate Stabilization Reserve

1                   unless..."

2                   Then it's -- the legislation sets out  
3 (a), (b), (c). We're most interested in (d). Just on  
4 the next page:

5                   "Unless the rebate is not projected  
6                   to reduce the reserves' MCT ratio to  
7                   less than 100 percent."

8                   This section refers to projection. It  
9 does not define the time frame for this projection.  
10 But if we compare that to the very next section, which  
11 is 18(5), there the legislation does define the time  
12 frame. And it makes specific -- it makes reference to  
13 a specific time frame.

14                   So in other words, when the legislature  
15 -- legislators wanted to refer to a specific time  
16 frame, they did. And by the fact that they did not do  
17 so in 18(4)(d) suggests that that is not something  
18 that's been predetermined.

19                   In other words, the Board still has  
20 jurisdiction on that issue or at least that would be  
21 the Taxi Coalition submission.

22

23                   (BRIEF PAUSE)

24

25                   MS. KAREN WITTMAN:       Second, Section

1 18(4) makes no reference to the timing of the rebate  
2 application. It does not, for example, specify that  
3 an application cannot be made to the Board until MPI  
4 makes an internal determination on projected MCT  
5 ratios. That was MPI's stated approach, but it's not  
6 in the legislation.

7           Ms. Low expressed that it would be  
8 MPI's intention not to apply for a rebate unless MPI  
9 internally determines that the MCT is not forecasted  
10 to be less than 100 percent within the forecasting  
11 period.

12           The result of that is, as we interpret  
13 it, that there's a possibility that MPI may never  
14 apply to the Board for a rebate if it internally  
15 forecasts MCT to be less than 100 percent two (2)  
16 years into the future.

17           But as confirmed by both Ms. -- sorry,  
18 Mr. Giesbrecht and Ms. Low, during cross-examination,  
19 all sorts of factors go into forecasting that may have  
20 an ultimate impact on MCT; such as portfolio  
21 composition and risk adjustments.

22           This forecasting, however, would not be  
23 subject to Board review because an application may  
24 never be brought.

25           Therefore, the Taxi Coalition says that

1 in order to ensure transparency and accountability,  
2 it's recommended that MPI be required to report  
3 annually, as part of the GRA, on MCT ratios and MCT  
4 forecasting.

5 Third, and finally, the Taxi Coalition  
6 recommends that the Board direct MPI to apply for a  
7 rebate in any upcoming GRA when the MCT ratio exceeds  
8 120 percent at the beginning of a fiscal year.

9 During the course of the GRA, the Board  
10 and -- and all parties could then examine whether the  
11 MCT was projected to fall below 100 percent MCT as  
12 part of the GRA process. This would encourage  
13 transparency and accountability, while also meeting  
14 the objectives of BITSA.

15 So those recommendations have been -- I  
16 see it's been pulled up on the screen right now --  
17 have been included in the conclusion on the Capital  
18 Management Plan in our written brief, so I won't go  
19 through them again.

20 But I would like to say thank you very  
21 much to -- to the Board for the opportunity to present  
22 comments in this year's GRA. And also thank MPI for  
23 the ongoing collaboration outside of the GRA with the  
24 Taxi Coalition. It's very much appreciated.

25 And subject to any questions the Board

1 may have, that concludes the Taxi Coalition's  
2 submissions.

3 THE PANEL CHAIRPERSON: Thank you, Ms.  
4 Wittman. Mr. Gabor...?

5 BOARD CHAIR GABOR: I have one (1)  
6 question and it relates to your last comment that we  
7 put a (INDISCERNIBLE) in that (INDISCERNIBLE).

8 MS. KAREN WITTMAN: If -- if MCT -- if  
9 -- based on the audited financial statements, MCT  
10 exceeds 120 percent, that they be required to bring it  
11 before the Board. And then, at that point, the Board  
12 would be given the opportunity to examine the  
13 assumptions that relate to the forecasting models.

14 BOARD CHAIR GABOR: Does that  
15 contradict 18(4)(b)? 18(4)(b) says they apply.

16 Your -- your approach seems to remove  
17 that and it's an automatic -- an automatic application  
18 once the levels are reached.

19 MS. KAREN WITTMAN: Well, it may, on  
20 its surface, appear to be a contradiction. But we  
21 think that in order to ensure transparency and  
22 accountability, which is required, and a goal for this  
23 process, that there has to be some kind of  
24 presentation on MCT before the Board.

25 The application for a rebate doesn't

1 necessarily need to be -- to pay out money, but it  
2 should involve a review of how the MCT was calculated  
3 because right now that's a bit of a black box. And  
4 also, what forecasting went into it.

5 BOARD CHAIR GABOR: Okay. So I don't  
6 have a problem in you saying, you know, we can  
7 consider -- issue a directive that they have to  
8 disclose what the MCT is and how they arrived at that.

9 But that's different than saying, once  
10 you hit those numbers give an automatic application,  
11 isn't it?

12 MS. KAREN WITTMAN: Agreed. And --  
13 and -- and that's essentially what we're -- we're  
14 ideally seeking, is that there be a reporting.

15 BOARD CHAIR GABOR: Yeah, I understand  
16 the transparency. Thank you.

17 THE PANEL CHAIRPERSON: Ms. Nemeč...?  
18 Mr. Bass...?

19 BOARD MEMBER BASS: Just in your last  
20 comment where you said something about MCT being a  
21 black box. How do you consider it to be a black box?

22 MS. KAREN WITTMAN: Well, a black box  
23 in the sense that the -- the basis for the  
24 calculations and what's involved in the calculations  
25 is not really, as we can tell, before the Board on a

1 regular basis in any detail.

2                   And there is -- you know, as PUB's  
3 counsel went through with MPI during cross-  
4 examination, there is a lot of judgment that goes into  
5 how the MCT is ultimately calculated, which can result  
6 in a significant swing. Upwards of, you know, in once  
7 case, \$80 million in terms of -- of what -- what the  
8 actual MCT value is deemed to be.

9                   How that's calculated and information  
10 about that should be in front of the Board.

11                   BOARD MEMBER BASS:     So that's sort of  
12 the second issue.

13                   In terms of it being here -- and I  
14 agree with you, I haven't seen the calculation here.  
15 But when you look at the actual MCT calculation that  
16 OSFI requires of a federally regulated financial  
17 institute, property and casualty, it's a very detailed  
18 compilation of materials from the financial statements  
19 of insurers.

20                   So I don't understand -- like, if it  
21 were here, how that could be a black box.

22                   MS. KAREN WITTMAN:     That wouldn't be a  
23 black box if that was here. But it's our  
24 understanding it's not actually here.

25                   BOARD MEMBER BASS:     Okay.

1 MS. KAREN WITTMAN: So when I say it's  
2 a black box, I mean, if that information was  
3 available, that would be different. But right now, we  
4 don't -- we don't have it.

5 BOARD MEMBER BASS: Okay. Thanks.

6 THE PANEL CHAIRPERSON: Ms.  
7 Boulter...?

8 Thank you very much, Ms. Wittman. It's  
9 2:30. We'll take a break now until a quarter to 3:00,  
10 please.

11

12 --- Upon recessing at 2:32 p.m.

13 --- Upon resuming at 2:48 p.m.

14

15 THE PANEL CHAIRPERSON: Thank you.  
16 Mr. Weinstein...?

17

18 CLOSING COMMENTS BY IBAM:

19 MR. MICHAEL WEINSTEIN: Thank you,  
20 Madam Chair. I'd like to begin by thanking -- on  
21 behalf of IBAM, thanking the Board for the opportunity  
22 to -- being at this year's GRA. I'd also like to  
23 thank counsel from PUB, from MPI and the other  
24 Interveners. I'd also like to thank PUB staff and,  
25 particularly, I think Ms. Schubert and

1 (INDISCERNIBLE).

2 Now with respect to my closing  
3 comments, I'd like to begin just for a moment by  
4 reflecting on the scope of IBAM's intervention in this  
5 year's GRA and IBAM's particular role as Intervener.

6 In Board Order 85/'22, the Board  
7 approved IBAM's Intervener's status application on a  
8 limited basis, specifically with respect to the issues  
9 of broker commissions and the broker agreement.

10 And, more specifically, the Board Order  
11 at page 17 as follows:

12 "The Board approves the application  
13 for Intervener status of IBAM on a  
14 limited basis. IBAM's Intervention  
15 will assist the Board in the Board's  
16 examination of broker commission  
17 expenses.

18 However, at this time, the Board  
19 does not require broader information  
20 about the nature and quality of the  
21 services provided in order to  
22 prepare a mandate.

23 Accordingly, IBAM is granted  
24 approval to intervene only on the  
25 issues of broker commissions and the

1 broker agreement. (INDISCERNIBLE)  
2 expects, that given its limited  
3 grant of intervention, IBAM will  
4 organize its attendance at the  
5 public hearings on days on which  
6 broker commissions and the  
7 (INDISCERNIBLE) could be reviewed.  
8 That IBAM's proposed budget will  
9 reflect this limited attendance."

10 In line with this mandate, we advised  
11 the Board during our opening statement that our  
12 intervention would concern the following areas:

13 The fact that the broker agreement  
14 contemplates reduced rates for Extension and creates  
15 two (2) different Extension rates for (INDISCERNIBLE)  
16 transactions.

17 The fact that Project Nova is delayed  
18 and brokers are working with MPI to negotiate to delay  
19 the launch of the two (2) commission rates for Basic.  
20 Results of such negotiations will then go to IBAM as  
21 members for ratification. And the fact that brokers  
22 did not contribute in any way to the delays of Project  
23 Nova.

24 And it -- it's respectfully submitted  
25 that the information IBAM saw to draw from MPI's

1 witnesses will assist the Board in considering and  
2 analyzing issues related to broker commissions and the  
3 MPI/IBAM our broker agreement.

4           And we also advised the Board at the  
5 outset of the hearing, that IBAM's aim through its  
6 limited intervention, was to ensure that the Board has  
7 a full and proper understanding of the issues relating  
8 to broker commissions and broker agreements entered  
9 into with MPI.

10           Now to summarize, IBAM's participation  
11 in this year's GRA has been focused on ensuring that  
12 the Board has a comprehensive view -- that the Board  
13 has a comprehensive view when it comes to broker  
14 commissions and the broker agreement by cross-  
15 examining witnesses, asking relevant information  
16 requests and framing the evidence now in its closing  
17 arguments.

18           IBAM occupies a unique position on the  
19 GRA as an Intervener. As the Board has heard,  
20 brokers, broker commissions, the existing broker  
21 agreement and the negotiation of a revised or a future  
22 broker agreement, have all been raised and discussed  
23 at various points throughout the hearing.

24           Further, brokers are routinely a topic  
25 of discussion at MPI GRA's. And, we submit that no

1 other Intervener is so routinely a topic of discussion  
2 as brokers are.

3 Brokers will play a significant part in  
4 Project Nova, which was a significant focus of this  
5 year's GRA.

6 As the online environment for -- pardon  
7 me, they'll play a significant role as the online  
8 environment for MPI customers is eventually rolled  
9 out.

10 In light of this, information relating  
11 to brokers is germane to a number of issues before the  
12 Board. For fifty-one (51) years brokerage has been the  
13 customer facing part of MPI and they account for 96 to  
14 97 percent of all Autopac transactions.

15 This enables MPI to efficiently service  
16 customers in all parts of the province, and it  
17 provides brokers with unique insights as to the level  
18 of service required in the market.

19 And, as the Board heard, IBAM and  
20 brokers have been working with MPI respecting the  
21 manner by which online services will be presented to  
22 customers.

23 You've heard from MPI that it has  
24 consulted and will consult with brokers and IBAM  
25 before releasing various aspects of Project Nova,

1 including with respect to release 3. Heard that on  
2 October 31st.

3 This is also shown in Section 3.5 of  
4 the MPI/IBAM agreement, which is found at part 4 of  
5 Nova, appendix 14.

6 Section 3.5 of that agreement sets out  
7 that the parties would create a broker/Nova committee,  
8 whereby brokers will have the opportunity to provide  
9 input into the design and development of Project Nova  
10 and the journey of MPI customers navigating through  
11 the MPI website. This, we say, is prudent, given  
12 brokerages' knowledge of customer requirements,  
13 generally, and of their customers histories and needs.

14 We further heard from MPI witnesses  
15 that IBAM has been working with MPI to negotiate  
16 revisions to the MPI/IBAM future services agreement,  
17 so as to line up the launch of online in-person  
18 commission rates, with the launch of online services.

19 Without IBAM's participation, it is  
20 respectfully submitted there is a risk that the Board  
21 would have before it an incomplete record.

22 From IBAM's perspective, this precise  
23 risk was realized last year, when IBAM did not  
24 participate as an Intervener. And following last  
25 year's GRA, Order 134-'21 characterized broker's roles

1 and online transactions in a manners with which IBAM  
2 respectfully did not agree.

3 And IBAM brought a motion to vary or  
4 strike portions of that Order. The relief sought in  
5 that motion was partially granted by this Board, which  
6 ordered then in Order Number 20/'22 that the relevant  
7 passage in the Order be amended.

8 And I provide that context of last  
9 year's events because we say that that's important as  
10 we progress through the remainder of our closing  
11 statement.

12 Consistent with the scope of its  
13 Intervener status, IBAM kept its intervention limited  
14 by monitoring much of the GRA, but only making six (6)  
15 Information Requests, five (5) on the public record  
16 and one (1) in the confidential portion of this  
17 proceedings.

18 We also wanted to ask questions during  
19 the expenses -- IFRS and Project Nova portions of the  
20 hearing in a very short series of questions of the  
21 undertaking panel.

22 Those questions and Information  
23 Requests were aimed at adducing and did adduce  
24 evidence before the Board that supports the following  
25 conclusion:

1                   Even though Project Nova has been  
2 pushed back, MPI is still experiencing cost savings as  
3 compared to the commissions MPI would have paid under  
4 the previous broker agreement. And we see that on the  
5 November 3rd transcript at pages 2270 to 2273 and in -  
6 - MPI Exhibits 122 and 123.

7                   And even though there are delays  
8 forecasted of approximately two (2) years that will  
9 increase broker commissions in the 2023/2024 year and  
10 the 2024/2025 year, these increases would not have  
11 happened had Nova been launched on time.

12                   MPI has, in fact, confirmed that IBAM  
13 did not contribute to the delays and that the  
14 commission rates would have otherwise resulted in  
15 immediate savings to MPI and ratepayers. And this is  
16 found in the October 31st transcripts at pages 1940 to  
17 1941.

18                   As mentioned, IBAM continues to work  
19 with MPI to negotiate a revised or restated agreement  
20 that may include pushing back commission rate changes  
21 to the launch of Nova. And this is confirmed in the  
22 October 19th transcript, at page 209 to 211 and in the  
23 October 20th transcript at page 43.

24                   Further, if IBAM and MPI can reach an  
25 agreement on pushing back the date of the change in

1 rates to the launch of release 3, benefits to the  
2 business case would be significant, assuming a launch  
3 date of July 2024. The numbers supporting that have  
4 been provided to you and are found at MPI Exhibits 122  
5 and 123.

6 MPI testified that having a broker  
7 mitigates risk for both customers and MPI. IBAM  
8 submits that the risk that is mitigated is the  
9 financial risk of being under insured and the manner  
10 by which brokers help to mitigate that risk by  
11 providing oversight and professional advice over  
12 customers' transactions, including online transactions  
13 in the future. And this was confirmed on October 31st  
14 in the transcript at page 1957.

15 If Manitobans are not receiving advice  
16 or (INDISCERNIBLE) on their insurance transactions,  
17 they may make choices that will result in under  
18 insured or in paying more for insurance than they need  
19 to

20 For example, yesterday we heard counsel  
21 for MPI talk about the fact that we are living in  
22 change -- in changing and uncertain times, and that  
23 this would be one (1) thing that all parties can agree  
24 on. And IBAM does agree.

25 And as the world around us changes too,

1 so will people's coverages needs. As their insurance  
2 needs change, the need to -- for oversight over  
3 transactions and for advice are amplified.

4           We know, for example, that many  
5 people's requirements for coverage changed over the  
6 course of the COVID pandemic as people worked from  
7 home.

8           If some Manitobans were not receiving  
9 advice or oversight over their insurance transactions,  
10 they might not know to change their coverage to  
11 pleasure to save money, or even worse, they might  
12 change their coverage to pleasure on a misapprehension  
13 that they're driving habits qualify for them for that  
14 coverage and they, in fact, do not.

15           Now, as some people are working on  
16 flexible schedules, advice is again needed with regard  
17 to these life changes and results in insurance needs.

18           Lastly, it became clear in this GRA  
19 that IBAM needed to address the suggestion that  
20 purchasing Autopac online would be simple and we just  
21 -- be just a few clicks for the customer.

22           Although this was not originally a name  
23 of IBAM's intervention, we submit the suggestion is  
24 relevant to Manitobans and had to be addressed. The  
25 importance of being adequately insured cannot be

1 overstated, as the ramifications to Manitobans of  
2 being under insured, being insured improperly, can be  
3 catastrophic.

4           As the landscape around us changes, so  
5 too do people's needs and we submit that to protect  
6 consumers and ensure they have the right coverage is  
7 more complex than the simple click of a box.

8           We note that the Consumers Association  
9 of Canada's presentation this morning described MPI's  
10 product as a simple product. However, proper context  
11 is needed.

12           Customers who choose to transact  
13 online, will be online for both Basic and Extension  
14 and they'll have important choices to make respecting  
15 their coverage.

16           The entire context of Mr. Herbelin's  
17 testimony on October 19th, is -- pardon -- as Mr.  
18 Herbelin was clear, he does not consider the choices  
19 required for purchasing MPI products online as simple.

20           On October 19th, our learned friend,  
21 Mr. Williams, on behalf of the CAC, asked Mr.  
22 Herbelin questions directly concerning service  
23 delivery and queried whether the process of renewing  
24 Basic or Extension products from MPI is simple or  
25 complex.

1                   While Mr. Herbelin conceded that the  
2 products may appear to be a simple product to  
3 ratepayers, he was clear that the process becomes more  
4 complicated as you look at the process and the details  
5 and that the product is composed of many different  
6 moving (INDISCERNIBLE).

7                   Importantly, he testified that  
8 customers don't really understand the choices they  
9 make in terms of deductibles and third-party liability  
10 'cause they've not been exposed to these choices on a  
11 regular basis. For the record, that's found in the  
12 October 19th transcript, pages 243 to 245.

13                   During our cross on the NOVA Panel,  
14 certain questions were read into the record. These  
15 questions are at the October 31 transcript, at pages  
16 1,949 to 1,952.

17                   MPI confirmed that the answers to these  
18 questions would be important to customers and to  
19 ensure that they understand the decisions they are  
20 making with -- with regard to their deductible, their  
21 level of third-party liability, and other decisions  
22 they make when transacting their insurance. And,  
23 again, this is found in the October 31 transcript, at  
24 pages 1,954 and 1,955.

25                   We submit that these questions are

1 representative of what customers bring into brokerages  
2 every day. It is also respectfully submitted that the  
3 vast majority of Manitobans do not know the answer to  
4 those questions.

5           Whether insurance is provided through a  
6 bricks and mortar storefront or through an on-line  
7 delivery channel, Manitobans benefit from having a  
8 broker as a resource to answer those questions or to  
9 take on their responsibility to review their on-line  
10 selections.

11           As mentioned earlier, MPI confirmed, on  
12 cross-examination, that customers don't understand the  
13 choices they are making with respect to their  
14 insurance because they aren't exposed to these choices  
15 every day.

16           It further confirmed that brokers play  
17 a role in consumer protection by explaining choices to  
18 customers, and those -- that's found in the October  
19 19th transcript, at pages 2 (INDISCERNIBLE) 45, and,  
20 in the October 31st transcript, at page 1,94  
21 (INDISCERNIBLE).

22           MPI also confirmed, on cross-  
23 examination, that having a broker mitigates the risk  
24 for customers and for MPI with regard to a customer  
25 being under -- under insured. They also confirmed

1 that by having professional oversight on those  
2 changes, including on-line transactions, there is a  
3 benefit to customers to provide advice on the impacts  
4 of changes and circumstances in their insurance. And  
5 that's, again, found in the October 31st transcript,  
6 at pages 1,957 and 1,961.

7 MPI further confirmed, in an  
8 undertaking, that it does not carry errors and  
9 omissions insurance for its employees, found at MPI  
10 Exhibit 98.

11 In sum, we submit that it is good  
12 business for MPI to reduce risks to customers, reduce  
13 risks to itself, and to use brokers to keep the model  
14 efficient by having brokers involved in providing  
15 professional oversight and advice to Manitobans.

16 Again, we respectfully submit that it  
17 is important to understand there is complexity to  
18 these transactions to ensure that the Board has the  
19 complete picture.

20 This morning, counsel for CAC argued  
21 that face-to-face interactions with brokers may be  
22 diminished when on-line launches. IBAM doesn't  
23 dispute this, however, the broker's involvement will  
24 not be diminished. Brokers will continue to serve  
25 their consumer protection function by doing background

1 work on the oversight of on-line transactions, as well  
2 as by continuing to interact with customers, whether  
3 over the phone, virtually, or face to face, as they  
4 provide advice to their customers.

5           In our client's view, a reduction in  
6 face-to-face transactions serves as a convenience to  
7 customers who prefer virtual transactions. So, the  
8 customer is still protected by what brokers will be  
9 doing in a non-face-to-face fashion for on-line  
10 transactions.

11           This represents a clear benefit to  
12 Manitobans. In the on-line environment, unlike in a  
13 traditional environment, a customer may initially  
14 bypass receiving advice from a broker or an employee,  
15 however, by requiring that a broker of record be  
16 selected for on-line renewals, Manitobans will be  
17 assured that they will enjoy the customer protection  
18 function offered by brokers, who will receive monthly  
19 reporting from MPI, to provide advance notice for  
20 renewals. This will both ensure the continuance of  
21 coverage for MPI customers and will enable brokers to  
22 advise and service these customers.

23           We conclude: Project Nova will  
24 fundamentally change the means by which many  
25 Manitobans purchase their insurance. Whereas the 96

1 percent of Basic revenue currently is delivered  
2 directly through broker offices, where the broker  
3 reviews the transactions for appropriateness and  
4 provides advice to the customers, Manitobans will now  
5 have the option to purchase their insurance over the  
6 internet.

7                   However, as you heard from MPI, itself,  
8 while the Autopac product may appear simple, it is  
9 not. Customers do not understand the ramifications of  
10 the choices before them and by brokers providing  
11 oversight and advice to customers, they're mitigating  
12 financial risk, for both customers and MPI, serving  
13 the consumer protection function, and providing a  
14 service to customers that MPI and Manitobans rely on  
15 brokerages to provide.

16                   As mentioned earlier, IBAM did not call  
17 evidence at this GRA, which was due to the scope of  
18 its int -- intervention, including due to Board Order  
19 Number 85/'22 which, as mentioned, stipulated that the  
20 Board did not require broader information about the  
21 nature and quality of the services provided by brokers  
22 in order to fulfil its mandate.

23                   Precise steps that a broker will take  
24 for its oversight and advisory role for on-line  
25 transaction has not, yet, been entirely determined, as

1 between MPI and IBM -- IBAM and, therefore, may be  
2 better addressed in a later GRA. But, what we do  
3 know, so far, is set out in Section 3.7.2 of the MPI-  
4 IBAM Agreement. I'm quoting from that Agreement. It  
5 says:

6 "MPI will develop monthly reporting  
7 for brokers, which provide advance  
8 notice for renewals, i.e., expiry  
9 lists. This procedure will ensure  
10 the continuance of coverage for MPI  
11 customers and will enable brokers to  
12 advise and service these MPI  
13 customers."

14 Although this provision does not set  
15 out the specific steps each broker will perform for  
16 on-line transactions, it contemplates the oversight  
17 and advisory functions brokers will continue to  
18 provide to customers transacting on line.

19 We have heard from MPI, during this  
20 GRA, that the specifics of on-line functionality or  
21 services are not, yet, known and won't be made  
22 available, until after the discovery stage for release  
23 3.

24 Brokers and MPI continue to work  
25 together, in good faith, as partners to cement the

1 details of the steps to be taken by brokers, and these  
2 details will be available to the Board in later GRAs.

3           Although there are delays to Project  
4 Nova, which have reduced the savings in the NOVA  
5 business case, Manitobans will still be saving ninety-  
6 six point one one million dollars (\$96,110,000) under  
7 the existing broker agreement, even if it were left  
8 unchanged.

9           This morning, CAC argued that  
10 uncertainty in broker negotiations is a risk to  
11 Project Nova. Respectfully, our client disagrees.  
12 Broker agreement is currently in place and, even with  
13 the delays, would result in substantial savings to  
14 MPI, through the NOVA business case.

15           As you've now heard, numerous times,  
16 brokers have been proactive in coming back to the  
17 table to negotiate, to move commission rate changes  
18 back to line up the release of on-line customer  
19 capabilities, which would increase the savings to MPI,  
20 through the NOVA business case.

21           Simply put, the negotiations that are  
22 ongoing are, certainly, not a risk to Project Nova and  
23 can only be a benefit.

24           There are over a billion dollars in  
25 policies in Manitoba, all owned by unique individuals

1 with needs. Brokers' oversight and advice helps  
2 Manitobans by ensuring that customers are not under or  
3 over insured. This also helps MPI because it  
4 mitigates risk to MPI.

5           Brokers provide a time-consuming  
6 advisory service which keeps those demands from  
7 loading on to MPI's operations and customer service  
8 employees and, more importantly, ensures that  
9 professionals, who have access to third-party  
10 Extension products, are the ones giving that customer  
11 advice.

12           MPI has been regularly able to claim  
13 Manitoba's rates as among the lowest in the country,  
14 in part, because of their low cost of distribution  
15 through the broker channel, and IBAM expects that this  
16 will continue in the future, as on-line services  
17 launch, while still ensuring that consumer protection  
18 is in place for all Manitobans.

19           We heard that Manitobans want on-line  
20 services. We've also heard, throughout this year's  
21 GRA that there have been problems with various parts  
22 of Project Nova, including the launch of on-line  
23 delivery.

24           As the customer-facing partner to MPI,  
25 brokers are committed to serving customers across

1 Manitoba and will continue to work in good faith with  
2 MPI to be a part of the solution.

3                   Subject to any questions from the  
4 Board, (INDISCERNIBLE).

5                   THE PANEL CHAIRPERSON:    Thank you.  
6 Ms. Nemec...?    Mr. Bass...?    Ms. Boulter...?

7                   BOARD MEMBER BOULTER:    I have a  
8 question.  You mentioned errors and omissions -- you  
9 mentioned errors and omissions but, in the future,  
10 where there's no broker-client interface on  
11 (INDISCERNIBLE) transaction and people will be  
12 selecting a broker, what recourse would that person  
13 have to errors and omissions?  They haven't had the --  
14 the interface part of it.

15                   MR. MICHAEL WEINSTEIN:    Well, I -- I  
16 will start by saying that we still, of course, know we  
17 need to work out the full details of what that  
18 interface is like, but, what IBAM submits is that by  
19 having a broker of record with oversight, that that,  
20 you know, has the ability to put in play that the --  
21 the broker, who carries errors and omissions  
22 liability, has an oversight role that there may be  
23 some recourse to the client that way, that they  
24 wouldn't have, if there was no broker of record  
25 designated.

1 BOARD MEMBER BOULTER: Are you  
2 proposing, then, that the brokers would, like, if  
3 they've had fifty (50) transactions done on line that  
4 day, they would go in and revisit that or question  
5 their clients?

6 I don't mean to belabour this or  
7 anything. I know it's kind of late in the game to be  
8 asking these questions but when you were talking about  
9 errors and omissions, I -- I (INDISCERNIBLE).

10 MR. MICHAEL WEINSTEIN: And it -- the  
11 -- there's no problem with asking the question. The -  
12 - I think that, number one, I'd point to the fact that  
13 -- that the current IBAM/MPI agreement contemplates  
14 advance notices for renewal, so the broker  
15 (INDISCERNIBLE) notice of what is up and coming, so  
16 they will have advanced notice of those renewals.

17 And I think, with respect to the  
18 balance, the details, we'll have to see what the --  
19 ultimately, you know, what -- what the details of --  
20 of, you know, how ultimately online rolls out as we  
21 get through dis -- pre-discovery and discovery.

22

23 (BRIEF PAUSE)

24

25 THE PANEL CHAIRPERSON: Thank you, Mr.

1 Weinstein. Mr. Monnin...?

2

3 CLOSING SUBMISSIONS BY BIKE WINNIPEG:

4 MR. CHRISTIAN MONNIN: Good afternoon.

5 Thank you, Madam Chair. On behalf of Bike Winnipeg

6 I'd like to thank you for the opportunity to

7 participate in the General Rate Application and for

8 the opportunity to be making submissions.

9 I -- I don't have a slide deck today,

10 but I will, however, attempt to structure my

11 submissions as follows: first, I'll begin with an

12 overview of Bike Winnipeg's intentions and goals that

13 lead it to intervene in the General Rate Application.

14 I'll then address key issues or

15 concerns and considerations that Bike Winnipeg

16 believes warrant particular attention by the Board.

17 Those will be broken down as follows: concept --

18 concepts, rather, of Vision Zero, and social costs;

19 Manitoba public concerns to budget increase to the

20 road safety budget; importance of maintaining road

21 safety as an aspect of the General Rate Application as

22 an ongoing basis.

23 Road Safety Technical Conference, the

24 pros, the cons, and recommendations on how to move

25 forward with that process. Bike Winnipeg's concerns

1 regarding the ability to properly address road safety  
2 issues within the context of this particular General  
3 Rate Application, and some concluding remarks  
4 (INDISCERNIBLE).

5                   With respect to the first issue,  
6 intentions and goals regarding the intervention. Bike  
7 Winnipeg intervened in the 2023 General Rate  
8 Application to build upon its participation, and  
9 contributions in previous General Rate applications  
10 that dealt with issues related to road safety.

11                   Repeat a little bit of our open  
12 submissions, in particular, Bike Winnipeg sought to  
13 intervene in this General Rate Application to build  
14 upon its recent participation in the Road Safety  
15 Technical conference which was June of '22; and to  
16 assist this Board in showing the optimum size of MPI's  
17 road safety budget, whether it's sufficient to enable  
18 a significant reduction of injuries to vulnerable  
19 road users in the short and long-term; showing MPI's  
20 road safety budget is efficient to meet Manitoba  
21 Public Insurance's mandate to ensure an adequate  
22 standard of driver knowledge and safety.

23                   Ensuring the quality and clarity of  
24 Manitoba Public Insurance's data collection, analysis  
25 and accessibility regarding collisions involving

1 vulnerable road users; ensuring the effectiveness at  
2 the Manitoba Public Insurance road safety initiatives;  
3 and assisting the Board in understanding considering  
4 the issues and matters flowing from and addressed  
5 within the Road Safety Technical Conference, the  
6 filing that flowed from the Second Round of  
7 Information Requests, which led to the report from the  
8 Road -- the Road Safety Technical Conference.

9                   On this last point, Bike Winnipeg would  
10 add that from a larger perspective it's seeking to  
11 assist the Board in ensuring that the Road Safety  
12 Technical Conference lives up to its promise to become  
13 an efficient and effective tool (INDISCERNIBLE); and  
14 the participants as it assesses MPI's Road Safety  
15 Program within the context of future General Rate  
16 Applications.

17                   Moving to the issues of -- of the  
18 Vision Zero and social costs, the Board may recall  
19 that Bike Winnipeg first began its participation in  
20 these General Rate Applications as a presenter.

21                   That involvement then involved --  
22 evolved, rather, with Bike Winnipeg as an Intervener.  
23 One (1) thing that has remained steadfast and constant  
24 throughout is Bike Winnipeg's strong advocacy for the  
25 adoption of Vision Zero, Vision Zero approach to road

1 safety.

2                   The additional constant has been Bike  
3 Winnipeg's strong advocacy to estimate social costs of  
4 collisions in order to have a better metric for  
5 evaluating financial allocations for road safety  
6 programming.

7                   While it seemed that in previous  
8 General Rate Applications both of these key important  
9 aspects of road safety were being adopted by Manitoba  
10 Public Insurance, in this particular General Rate  
11 Application, (INDISCERNIBLE) suggests that it leads to  
12 the conclusion that while injuries and fatalities are  
13 often mentioned as a primary concern, the concepts of  
14 Vision Zero and social costs are not prominent.

15                   Considering the Road to Zero initiative  
16 on page 4 of its safety strategy in the second  
17 paragraph, Manitoba Public Insurance reports that:

18                    "In spite of several successful  
19 initiatives, the overall Road to  
20 Zero Plan was not able to achieve  
21 its goal with the trend of traffic  
22 fatalities plateauing over the years  
23 from 2017 to 20 (INDISCERNIBLE)."

24                   The fact that this plan plateaued over  
25 the years, that it was in effect was acknowledged by

1 Manitoba Public Insurance during cross-examination,  
2 (INDISCERNIBLE) page 80, lines 20 (INDISCERNIBLE), and  
3 that this plan has taken Manitoba Public Insurance as  
4 far as it can.

5 Manitoba Public Insurance has noted  
6 that there are now two (2) Road Safety Plans. There  
7 is a Provincial Road Safety Plan, which was developed  
8 by a number of different members drawn from different  
9 departments in the government.

10 Then there is the Manitoba Insurance  
11 new Road Safety Strategy. This new Road Safety  
12 Strategy Plan does not seek to meet the goal of zero  
13 traffic fatalities, rather it seeks a reduction.

14 When pressed about this on cross-  
15 examination, they stated that:

16 "This is a five (5) year plan and  
17 that getting to zero is just not  
18 going to happen."

19 (INDISCERNIBLE) 1481, lines 13 to 14.  
20 Bike Winnipeg submits that while we all must be  
21 realistic, recognizing that getting to zero would  
22 likely not occur in five (5) years, but what is of  
23 concern is the appearance that the commitment to  
24 Vision Zero approach is at best wavering.

25 That wavering commitment can also been

1 seen on page 14 of part 9, loss prevention, line  
2 (INDISCERNIBLE). Manitoba Public Insurance provides  
3 that:

4 "The success of the Road Safety  
5 Strategy will be evaluated based on  
6 whether it's able to achieve the  
7 goal of downward trends for the  
8 rates of fatalities, serious  
9 injuries in Manitoba (INDISCERNIBLE)  
10 that exceed the rates of the  
11 national average."

12 Regarding social costs, it's fair to  
13 say that Manitoba Public Insurance's position as it  
14 relates to social costs is far less nuanced. Manitoba  
15 Public Insurance Road Safety panel's evidence on this  
16 point was, indeed, we would suggest, categorical. Page  
17 1368, lines 19-22, provide as follows:

18 "When I wear my road safety had my  
19 priority is a lot different. Claims  
20 cost, social cost, they don't matter  
21 to me at all, not my priority. I'm  
22 not focussed on those."

23 That position, we would suggest, was  
24 stated more than once upon cross-examination of the  
25 Road Safety panel.

1                   It was also MPI's evidence that the  
2 loss prevention analysis team of Manitoba Public  
3 Insurance is not mandate, nor qualified to do a social  
4 cost analysis or road collision and road safety  
5 programs.

6                   Bike Winnipeg has concerns that what  
7 was previously seen to be commitments to these two (2)  
8 fundamental concepts, is on the one hand being  
9 diluted, on the other hand abandoned.

10                  On the budget increase, we heard during  
11 the Road Safety Panel's presentation that Manitoba  
12 Public Insurance was proposing to make \$2 million  
13 available. The new initiatives had not yet been  
14 determined.

15                  As was noted by Mr. Doell in his  
16 presentation, page 1392, lines 13 to 18:

17                         "So, in the end what we came up with  
18                         is the budget that we see here. So,  
19                         as you'll note, we're going to be  
20                         spending an extra \$2 million in  
21                         '23/'24. That's really in line with  
22                         the data-driven approach that we've  
23                         been sharing with you  
24                         (INDISCERNIBLE)."

25

1                   Quite simply, while this is admittedly  
2 something that came as somewhat of a surprise during  
3 the evidence portion of the Road Safety Panel, this is  
4 indeed welcome news. Bike Winnipeg looks forward to  
5 working with Manitoba Public Insurance to ensure those  
6 funds are effectively spent on Road Safety programming  
7 and, in particular, Road Safety Education.

8                   I'd like to spend some time with the  
9 panel on -- on Bike Winnipeg's views on why road  
10 safety ought to remain firmly within the realm of the  
11 General Rate Application.

12                   Bike Winnipeg's participation in these  
13 General Rate Applications has always been focussed on  
14 seeking improvements to the efficiency and  
15 effectiveness of Manitoba Public Insurance road safety  
16 and road safety education programs.

17                   However, we recognize that the manner  
18 in which road safety is -- is addressed and considered  
19 within the context of General Rate Applications has  
20 indeed changed. Bike Winnipeg understands. Bike  
21 Winnipeg appreciates that the Board has made the  
22 conscious decision to pursue the bulk of the road  
23 safety discussions outside the confines of the General  
24 Rate Application main hearing.

25                   As noted during our opening

1 submissions, Bike Winnipeg maintains the view that the  
2 Road Safety Technical Conference is a useful tool to  
3 address road safety issues.

4 But, at the same time, it remains just  
5 that, a tool and by no means is it a panacea to the  
6 universe of the road safety issues that this Board was  
7 tasked to consider to address.

8 Also stated during its opening  
9 submissions, Bike Winnipeg is not wavering from its  
10 support for the concept of the Road Safety Technical  
11 Conference, not at all.

12 Nor is it wavering from its commitment  
13 to continue to work collabora -- collaboratively with  
14 Manitoba Public Insurance on the issues of road  
15 safety.

16 However, Bike Winnipeg is of the view  
17 that these issues must be effectively integrated in  
18 the General Rate Application to ensure that road  
19 safety remains part of the formal regulatory process  
20 to establish, monitor, enforce standards in the public  
21 interest as only this Board can do within the context  
22 of a General Rate Application.

23 Manitoba Public Insurance is embarking  
24 on a new five (5) year road safety strategy that is  
25 purportedly keeping with its commitment to data-driven

1 decision making. It uses data as a foundation for  
2 identifying and targeting solutions for road safety  
3 issues.

4 We've also heard that the first phase,  
5 the data collection phase, is at or near completion,  
6 and that a new dashboard would be rolled out around  
7 the new year.

8 Given that Manitoba Public Insurance is  
9 embarking on a new road safety strategy with a  
10 commitment to data-driven decision making, it remains  
11 imperative that this Board ensures the adequacy of its  
12 new road safety programs, in particular, as it relates  
13 to fatal and severe injuries.

14 Given that Manitoba Public Insurance is  
15 embarking on a new five (5) year road safety strategy,  
16 it's imperative that the Board ensures the quality and  
17 clarity of Manitoba Public Insurance data collection  
18 analysis regarding collisions, in particular, those  
19 involving vulnerable road users.

20 As well, as we've all been made aware,  
21 Manitoba Public Insurance has advised that it's  
22 increasing its road safety budget by \$2 million in '23  
23 and '24. Importantly, we've heard evidence that that  
24 amount is not earmarked for any particular program.  
25 We are excited at the prospect that this could help

1 the development of good, new road safety initiatives.

2 This welcome last-minute budget  
3 increment underscores the fact that it remains  
4 imperative that this Board maintains the  
5 responsibility to determine the optimum size of the  
6 road safety budget to be sufficient to enable a  
7 sufficient reduction of road safety fatalities and  
8 serious injuries.

9 On the issue of the road -- the Road  
10 Safety Technical Conference, while Bike Winnipeg  
11 maintains that road safety ought to remain a part of  
12 the General Rate Application process, it participated  
13 in the Road Safety Technical Conference in good faith  
14 (INDISCERNIBLE) desire and the goal that the  
15 conference provide the airing of technical issues.

16 In that regard, Bike Winnipeg prepared  
17 diligently for the June Road Safety Technical  
18 Conference, Mr. Feaver, who is here with me today and  
19 Mr. Cohoe, C-O-H-O-E for the record, presented Bike  
20 Winnipeg's positions and arguments which can be  
21 summarized as follows:

22 Identifying inconsistencies in Manitoba  
23 Public Insurance data analysis, (INDISCERNIBLE)  
24 methodologies to get a better understanding of driver  
25 knowledge gaps, and presenting ideas for more

1 effective communications to educate existing drivers  
2 on safety issues.

3           Bike Winnipeg provided a summary of its  
4 key points to all parties after the Road Safety  
5 Technical Conference. To amplify the key concerns  
6 that were raised by Bike Winnipeg at -- at the Road  
7 Safety Technical Conference, I'd like to make a few  
8 comments in that regard.

9           During the conference, Bike Winnipeg  
10 raised these following concerns: As the lead  
11 authority in Manitoba responsible for training all  
12 drivers to operate vehicles safely on our roadways,  
13 Manitoba Public Insurance has not taken sufficient  
14 measures to understand the gaps in knowledge,  
15 attitudes, driving behaviour of drivers of all ages in  
16 Manitoba.

17           This is a key first step in developing  
18 training programs to maintain a high standard of road  
19 safety training. From Bike Winnipeg's perspective,  
20 much of Manitoba Public Insurance messaging  
21 communications is soft. Drivers need more than a  
22 nudge; they need to be told what to do.

23           Madam Chair, we would submit this is  
24 consistent with the line of questioning you had with  
25 Mr. Sarginson regarding the total penalties for a

1 distracted driving conviction with the following  
2 exchanges of note at page 16 (INDISCERNIBLE), lines 3  
3 to 17:

4 "Question: My question then is,  
5 given that the -- given that the  
6 penalties for dis -- distracted  
7 driving are pretty substantial, I've  
8 never seen a campaign that informs  
9 the public on how substantial those  
10 penalties are.

11 Could that help to be a deterrent  
12 effect for people using their cell  
13 phones when they're driving if they  
14 knew exactly what penalties they  
15 could be subjected to if they were  
16 convicted?

17 Answer: I don't think that there  
18 are. I don't think that we  
19 specifically say what the penalties  
20 are in some of our anti-distracted  
21 driving campaigns."

22 Using media advertising to achieve  
23 behaviour change is difficult. Given that this  
24 message -- messaging is about safely operating a  
25 vehicle, more effective methodologies must be used.

1 MPI must develop more effective means for  
2 communicating with drivers in Manitoba.

3 Another key point raised by Bike  
4 Winnipeg at the Road Technical Conference (sic) was  
5 regard -- related to urban and rural incident data.  
6 These should be analysed and displayed separately.  
7 Collision conditions are entirely different in rural  
8 and urban areas, resulting in different causes of  
9 injury.

10 Rural injuries typically occur at  
11 speeds beyond the limits of the vehicle to protect its  
12 occupants. In urban environments, collisions  
13 resulting in injured vulnerable road users are much  
14 more common.

15 We look forward to rolling -- to the  
16 rolling out of the new dashboard which we understand  
17 will address some of these concerns. It is important  
18 that all discussion of programs to reduce fatalities  
19 and serious injuries talk about rural and urban  
20 environments separately.

21 My Friend from CMMG raised concerns  
22 about the large vehicle study which we adopt and rely  
23 upon, and we thank her for those comments.

24 What can be taken away from -- from the  
25 summary report of the Technical Conference? And

1 that's a key consideration today and -- and for a  
2 going-forward basis.

3                   Bike Winnipeg submits that the summary  
4 report on the Road Safety Technical Conference  
5 provides the reader, provides to this Board, a high  
6 level overview of that full-day meeting. A reading of  
7 the summary report provides the reader with the  
8 understanding that Manitoba Public Insurance met with  
9 a set of stakeholders, described their road safety  
10 plans, and heard comments.

11                   The summary report does not, in Bike  
12 Winnipeg's submissions, meaningfully identify where  
13 there was a consensus regarding Manitoba Public  
14 Insurance's proposed analysis and methodologies and  
15 where there existed a legitimate -- or legitimate  
16 disagreements, rather, or lack of consensus.

17                   The Road Safety Technical Conference  
18 gave the participants knowledge of Manitoba Public  
19 Insurance's road safety plans and issues, but it did  
20 not necessarily facilitate resolving issues between  
21 these parties.

22                   And so certain recommendations  
23 regarding the Road Safety Technical Conference is as  
24 follows: The road safety process should go beyond  
25 sharing information to resolving issues over the

1 effectiveness and analysis and programming.

2           Bike Winnipeg cautions that, as the  
3 process is presently framed, Manitoba Public Insurance  
4 can choose to heed or choose to ignore road safety  
5 advice provided in the Road Safety Technical  
6 Conference process; that is why it remains important  
7 that the Board ensure oversight and more rigour in  
8 this process.

9           In short, Manitoba Public Insurance has  
10 shown itself to be far more responsive to Board  
11 directions. In that regard, Bike Winnipeg submits  
12 that the Board and all stakeholders would benefit from  
13 a Road Safety Technical Conference process that  
14 provides an independent, detailed summary of important  
15 road safety issues (INDISCERNIBLE) there wasn't  
16 consensus, (INDISCERNIBLE) valid suggestions, valid  
17 concerns.

18           I'd like to spend some time on -- on  
19 the concerns with Bike Winnipeg's ability to deal with  
20 -- with road safety issues in the context of this  
21 General Rate Application. It would be along the lines  
22 of -- of a complete and -- and timely road concerned.

23           Bike Winnipeg appreciates the -- that  
24 the significant amount of work that such an endeavour  
25 of a General Rate Applications entails. And it does

1 not mean to seek to -- to minimize the efforts taken  
2 upon by all, and in particular Manitoba Public  
3 Insurance.

4 In addition, Bike Winnipeg recognizes  
5 that there are disparate views regarding how much or  
6 how little the issue of road safety ought to be  
7 considered in the context of a General Rate  
8 Application.

9 However, as it relates to road safety,  
10 Bike Winnipeg submits that in this General Rate  
11 Application, a full consideration of Manitoba Public  
12 Insurance's road safety program and budget was in a  
13 sense restricted.

14 The new road safety strategy was not  
15 provided until the First Round Information Request by  
16 our Friends at CAC. The Road Safety Technical  
17 Conference was not (INDISCERNIBLE) until the Second  
18 Round IR on behalf of Bike Winnipeg. And finally,  
19 some very key and important things were coming out, as  
20 we noted, with the panel in real time, a significant  
21 one being the increase of the (INDISCERNIBLE) dollars.

22 Under the heading of 'General  
23 Conclusions', Bike Winnipeg recognizes that, on  
24 account of the COVID pandemic, the Board  
25 (INDISCERNIBLE) annual review of road safety was

1 delayed by a year. Add to this fact that MPI has a  
2 new road safety strategy, an increased, purportedly  
3 more nimble budget.

4                   Bike Winnipeg submits that the June  
5 2022 Road Safety Technical Conference must be followed  
6 up with a further such meeting as soon as practicable  
7 with interested par -- participants. The next meeting  
8 must be led by an independent chair. I believe that  
9 Dr. Hall (phonetic) is knowledgeable and well-versed  
10 in the issues and the process. I take no issue with  
11 Dr. Hall continuing on who was mandated to report and  
12 clarify where there is an agreement or legitimate  
13 disagreement on important road safety issues that are  
14 relevant to this Board's duties within the context of  
15 a General Rate Application.

16                   With all deference to my friends at  
17 MPI, it is more than just how much is spent, it's how  
18 you get to the analysis of where to spend and when to  
19 spend.

20                   Manitoba Public Insurance must complete  
21 the commitments and actions set out in the current  
22 summary report in advance of this next meeting. That  
23 next meeting should occur in a timely manner that  
24 would allow a meaningful of the road safety budget and  
25 programming, we would submit, at next year's General

1 Rate Application.

2 As we heard my friends from CAC in  
3 their submissions, that road safety took a backseat.  
4 We don't dispute that. And there are some catch-ups  
5 that ought to be done.

6 Bike Winnipeg welcomes the Board's  
7 initiative to establish the second road safety  
8 technical conference (INDISCERNIBLE) facilitated an  
9 exchange of information about road safety plans that  
10 led to a better understanding but not entirely so far  
11 that it lead to better collaboration. It led to some  
12 collaboration.

13 We heard again from our friends at the  
14 CMMG about maybe some gaps in the collaboration, in  
15 particular, in regard to the large vehicle study.

16 Bike Winnipeg recommends that the Board  
17 seek to proceed with a follow-up road safety technical  
18 conference process to achieve consensus on the  
19 analysis of the available data and the most effective  
20 means, changing driver behaviour.

21 Bike Winnipeg welcomes Manitoba Public  
22 Insurance's focus on reducing fatalities and serious  
23 injuries rather than loss prevention. Bike Winnipeg  
24 is of the view that the loss prevention should be  
25 removed from the language used in road safety

1 (INDISCERNIBLE) and that social costing should be used  
2 to (INDISCERNIBLE) progress (INDISCERNIBLE) objective.

3 Social costing is a tool that's been  
4 developed by economists for situations such as this  
5 and would facilitate balancing the impact of  
6 fatalities and serious injuries against the cost of  
7 avoiding them.

8 Bike Winnipeg is concerned that the  
9 Manitoba Public Insurance -- Public Insurance's past  
10 programs and expenditures have been insufficient to  
11 make Manitoba roads safer for all users. Fatality and  
12 major injury numbers decline as motor vehicles are  
13 increasingly effective in protecting their occupants;  
14 that vulnerable road users are suffering from less  
15 safe roads.

16 We also welcome the establishment in  
17 the \$2 million increase in the budget to develop and  
18 test new road safety programs. Initial step, the  
19 urgent task of developing approved safety training for  
20 all (INDISCERNIBLE).

21 (INDISCERNIBLE) might be inclined to  
22 ask what is an optimal budget? An optimal budget will  
23 achieve the goal of reducing fatalities and serious  
24 injuries in rural and urban -- urban environments at a  
25 rate significantly faster than other jurisdictions

1 year after year.

2                   It is not just the amount of money,  
3 it's how effectively it is used. The Board has seen  
4 how training new drivers is a tough task. Changing  
5 the behaviours of existing drivers is an even more  
6 difficult task.

7                   Bike Winnipeg welcomes Manitoba Public  
8 Insurance's initiatives to improve road safety data  
9 analysis and make that information available to  
10 others. However, Manitoba Public Insurance must go  
11 beyond sharing data, must use data to manage effective  
12 road safety training for all drivers, new and  
13 experienced.

14                   And Manitoba Public Insurance must be  
15 responsive to outside input on their data analysis  
16 programming methodologies.

17                   Subject to any questions from the  
18 Board, those are our submissions for today. Again,  
19 thank you for your courtesy of being able to  
20 participate.

21                   THE PANEL CHAIRPERSON: Thank you, Mr.  
22 Monnin.

23

24   (BRIEF PAUSE)

25

1 BOARD CHAIR GABOR: Mr. Monnin, I just  
2 want to ask one (1) specific question. I -- I get the  
3 (INDISCERNIBLE) evidence right.

4 I believe that Mr. Triggs said that he  
5 didn't think that we needed a technical conference  
6 that was run -- seen by the PUB, that, in fact, what  
7 should happen is there should be more of a  
8 collaborative relationship directly with MPI and the  
9 different stakeholders, that it be on a regular basis.

10 I'm just wondering if you could comment  
11 on that.

12 MR. CHRISTIAN MONNIN: I think  
13 collaboration is obviously a preferred route, but the  
14 comment that we made previously in our submissions is  
15 that it's a non-binding -- let me amplify that -- it's  
16 a non-binding process. It's -- it's outside of -- of  
17 the regulatory process.

18 And within the confines of that, they  
19 can take or leave what's being suggested. They could  
20 take or leave what we would like to collaborate with.  
21 A perfect example about that is -- is the large  
22 vehicle study.

23 And we think that rigour and oversight  
24 of -- of (INDISCERNIBLE) required. And, obviously,  
25 it's to the benefit of all to take out -- the

1 technical aspects away from a General Rate  
2 Application, but something has to come forward to this  
3 Board that's useful.

4 And you can only collaborate so far.  
5 And eventually, at one point, this Board needs to make  
6 decisions and this Board needs to make directives to  
7 MPI to make sure that they're meeting their mandate,  
8 that their budgets are sufficiently being spent on  
9 road safety issues.

10 So, the concern about trying to push  
11 the matter to being even more collaboratively -- more  
12 collaborative, I think dilutes the oversight  
13 responsibilities of this Board, and that's our  
14 concern.

15 BOARD CHAIR GABOR: Thank you.

16 THE PANEL CHAIRPERSON: (INDISCERNIBLE).  
17 Thank you, Mr. Monnin. Mr. Scarfone...?

18 MR. STEVE SCARFONE: Thank you, Madam  
19 Chair. Just before I begin, I'll read into the record  
20 (INDISCERNIBLE) that I would yesterday (INDISCERNIBLE)  
21 brought.

22 THE PANEL CHAIRPERSON: Yes. Thank  
23 you.

24 MR. STEVE SCARFONE: So, yesterday,  
25 MPIC moved before this Board to have four (4)

1 additional documents added to the confidential record,  
2 three (3) of which were observation logs from  
3 PricewaterhouseCoopers dated June 1st, June 30th, and  
4 September 28th, 2022, along with the document that was  
5 generated by MPIC that was, essentially, a benefit re-  
6 baselining (INDISCERNIBLE) NOVA budget.

7                   That particular motion was not opposed  
8 by the Interveners and was granted by this Board and  
9 so those documents are now added to the confidential s  
10 module.

11                   THE PANEL CHAIRPERSON:    Yes.  Thank  
12 you.

13

14 REPLY BY MPI:

15                   MR. STEVE SCARFONE:    Thank you.  So,  
16 the Corporation will now make some brief comments in  
17 reply.  I note that it's 3:37.  It's been a long  
18 afternoon, a long day.  I (INDISCERNIBLE) counsel that  
19 will be done by four o'clock, so if the Board can have  
20 just a little bit more patience (INDISCERNIBLE).

21                   I will start by -- by saying that  
22 attempting to immediately turn to the smoke and  
23 mirrors comment and address that, but I see that Mr.  
24 Williams, or Dr. Williams, is no longer with us.  I'm  
25 confident he was talking about Mr. Guerra anyways

1 (INDISCERNIBLE) his part of that cross.

2 But if I could sum up the CAC's hundred  
3 and twenty-one (121) slide presentation, I think their  
4 main objection to the Corporation's application are  
5 found in the increased full-time equivalents, along  
6 with how the Corporation sets its rates. And -- and  
7 he pointed to his expert witness.

8 I would say on the expenditure side in  
9 reply that clear evidence, MPI submits, was adduced at  
10 this Hearing concerning those expenditures. And I  
11 would encourage the Board, if necessary, to review all  
12 the transcripts, refresh your memories concerning many  
13 challenges now being faced by my client on NOVA,  
14 people risk, the operations. We heard a lot of  
15 evidence from MPIC on those fronts.

16 So, at the end of the day, what does it  
17 mean for this Board? Well, it means: Are the proposed  
18 expenditure -- expenditures reasonable in all the  
19 circumstances; that's the issue?

20 Dr. Williams would say no. MPIC would  
21 say yes. But this is no doubt the issue, are those  
22 expenditures reasonable?

23 Kristen, if you could pull up the  
24 portion of the transcript that I directed you to,  
25 please. You can go to 192.

1 (BRIEF PAUSE)

2

3 MR. STEVE SCARFONE: Yeah. So, this -  
4 - on the FTE count, we heard evidence about two  
5 hundred and eighty (280) FTEs, \$36 million.

6 I don't want to leave the Board with  
7 this impression that when MPIC leaves this hearing  
8 room, that we're going out to hire two hundred and  
9 eighty-three (283) new people. I'm concerned that  
10 that's the impression that was left with this Board  
11 following the presentation by Dr. Williams.

12 And the transcript that's before you  
13 was Mr. Herbelin on day 1, and there was foreshadowing  
14 there, and it was in response to a question from Board  
15 counsel regarding the increase to staffing levels.

16 And you'll see there right in the  
17 middle of the page at line 18 we found ourselves in a  
18 position where we didn't have sufficient capacity to  
19 serve the Manitoba (INDISCERNIBLE) struggling in the  
20 past month or so to being able to pick up the phone,  
21 answer questions, address the needs of Manitobans  
22 (INDISCERNIBLE) he speaks to the significant delays.  
23 And then, further down (INDISCERNIBLE) so we have to  
24 address that.

25 And this is part of the increase that

1 is in our budget for next year. This is the important  
2 part.

3 But in fact, we've not waited for the  
4 next fiscal year to start. We needed to start hiring  
5 on that front to make sure that we can provide the  
6 services that Manitobans (INDISCERNIBLE) want and  
7 deserve. He makes that same point with respect to  
8 NOVA.

9 And so, this isn't -- these are over-  
10 budgeted positions. Some of them. And we heard that  
11 later from Mr. Giesbrecht, the next day, when he  
12 introduced the two-eighty-three (283).

13 We also heard that from Ms. Low, where  
14 she went to great lengths to talk about the  
15 augmentation of her department, the new actuaries that  
16 are (INDISCERNIBLE). These are the issues that the  
17 Corporation is dealing with.

18 So just to be clear, the two-eighty-  
19 three (283) is not tomorrow. The two-eighty-three  
20 (283) is happening now. And -- and that's an  
21 important point that we wanted to clarify with the  
22 Board.

23 So again, Corporation has, for too  
24 long, denied its operations adequate resources; that  
25 was the evidence.

1                   Are the expenditures reasonable when  
2 viewed not in isolation by way of a PowerPoint  
3 presentation this morning; but rather, through the  
4 evidence, the rate application, and the viva voce  
5 evidence that you heard (INDISCERNIBLE) witnesses.  
6 That's what this Board has to consider and turn its  
7 mind to. Determining whether the expenditures are  
8 reasonable.

9                   We heard that evidence (INDISCERNIBLE)  
10 approximately 11 percent increase. And -- and I asked  
11 Mr. Giesbrecht, How are you doing that and coming here  
12 at minus point-one (.1)? And he didn't make any  
13 excuses. He said, Look, claims are down. This is a  
14 good time to do it. Claims are down. That's how  
15 we're doing it.

16                   Not everybody in this room knows that.  
17 When claims are down, allows my client more  
18 opportunities to do the things it needs to do.

19                   The Corporation cannot operate on a  
20 skeleton crew, quite frankly, to service Manitobans.

21                   There's not much to say in reply to the  
22 NOVA evidence, in my view. There was a suggestion by  
23 the CAC that there will likely be an increase to the  
24 budget because there's been no pre-discovery or  
25 discovery of releases 3 and 4.

1 I don't think that the Corporation has  
2 said there will not be. But certainly, the evidence  
3 here was that the budget now is designed to see this  
4 thing through the end. That's the evidence that was  
5 left with this Board.

6 So CAC can speculate as to a possible  
7 increase, but that's all it is; speculation at this  
8 point.

9 One (1) of the recommendations on NOVA  
10 was that this Board consider directing to our Board of  
11 Directors that it contained costs in the 2022 re-  
12 baseline.

13 It reminds me somewhat of the directive  
14 last year where the CAC asked this Board to direct Mr.  
15 Herbelin to go negotiate a gov -- deal with  
16 government to settle that DVA funding issue. Same  
17 kind of directive.

18 The Corporation doesn't need a  
19 directive to know that (a) it has to stay within its  
20 re-baseline budget for NOVA, or that it needs to find  
21 a funding solution for NOVA -- for DVA. The  
22 Corporation is well aware of that. Mr. Herbelin knows  
23 about these things.

24 On investments, I'll borrow a term  
25 that's in CAC slide deck and that is, Through the

1 cruel prism of hindsight. I like that turn of phrase.

2                   And what I mean by that is most of the  
3 criticisms that was directed at MPIC dealt with  
4 inflation and -- and whether the Corporation could  
5 have done more to protect itself against what we're  
6 dealing with now, back in 2018.

7                   And Mr. Williams says, Well, MPIC --  
8 well, now they recognize that inflation is a risk,  
9 which suggests we didn't turn our mind to it in 2018.

10                   Well, his own evidence was that Mr.  
11 Bunston says, That's the first thing we do, is we pick  
12 a benchmark. We look at our liabilities, we pick a  
13 benchmark. We had an option. They went with the  
14 nominal. Now they're going with a combination of the  
15 real and the nominal.

16                   But in 2018, was inflation a real risk?  
17 The evidence before you, no. So they didn't go with  
18 the real liability benchmark.

19                   And you'll recall that Mr. Williams put  
20 to Mr. Bunston, Well, you remember those twelve (12)  
21 recommendations -- or eighteen (18) of them, I think,  
22 Mr. Viola made, right? And -- and he reminded him of  
23 the colourful hockey analogy that he made in adjusting  
24 that certain recommendations be adopted, including  
25 inflation protection.

1                   But I don't recall carrying that hockey  
2 analogy a bit further. I don't recall Mr. Viola  
3 saying, And very soon, we're all going to playing in  
4 front of empty buildings for the next year because  
5 there's a big pandemic that's about (INDISCERNIBLE)  
6 nobody foresaw that.

7                   And so, the 2018 strategy didn't have  
8 inflation protection; not like the Corporation is now  
9 doing. And that, again, is viewed through the cruel  
10 prism of hindsight.

11                   And it might be a good time also to  
12 remind this Board what it said after that rate  
13 application. When it comes to the Corporation's  
14 overall investment strategy, the Board recognizes that  
15 its oversight role does not extend to directing the  
16 Corporation as to the particulars of its portfolio  
17 management.

18                   And, indeed, it found, after  
19 considerable and detailed information concerning the  
20 asset liability management and the decisions that the  
21 Corporation was making, that MPIC had selected from a  
22 range of reasonable options for its portfolios.

23                   That was in 2018. The options that we  
24 selected were reasonable, according to (INDISCERNIBLE)  
25 well, fast forward to today, and then looking back, it

1 doesn't make those selections unreasonable now, does  
2 it? Of course not. They were reasonable at the time.  
3 So that's an important point to remember.

4                   And there's criticism about the asset  
5 mixes. And we've said repeatedly that equities and  
6 levered bonds, leverage strategies, we're a Crown  
7 Corporation. Those do not fall within our mandate.  
8 That mandate being risk management, rate stability.

9                   Though Ms. Meek would say, Well, wait a  
10 minute, they keep saying it doesn't fit the risk  
11 profile, but there's no evidence of that. Sure there  
12 is. Take a look at the risk appetite statement -  
13 filed. Take a look at the investment policy statement  
14 - filed.

15                   All of that is consistent with what our  
16 Board of Directors does. It shies away from those  
17 assets. And it will continue to do that.

18                   Acknowledging it was a bad year, as Mr.  
19 Williams says, for those bonds. Bad year.

20                   One (1) other point on the inflation, I  
21 would say -- predicting inflation because Mr.  
22 (INDISCERNIBLE) Well, it's not about predicting  
23 inflation, it's about protecting yourself against  
24 risk.

25                   Well, I've spoke to that. But there's

1 no free lunch. No person, no industry is immune from  
2 the strains of inflation. So by having real return  
3 bonds put in our portfolio four (4) years ago, doesn't  
4 mean we're just, Oh, MPI is protected from the effects  
5 of inflation completely because it was able to  
6 purchase real return bonds. The first thing to  
7 remember about those bonds -- we heard evidence from  
8 that four (4) years ago -- those returns are puny.  
9 There's no returns on those bonds.

10                   So that was a factor in deciding not to  
11 pick the real return -- or the real liability  
12 benchmark and purchase that kind of protection. That  
13 was a factor.

14                   So there are considerations. But yes,  
15 the constraints are still there. No to equities. No  
16 to leverage.

17                   And the effects of inflation,  
18 notwithstanding that the investment portfolio might  
19 not be protected, are -- are felt, as we heard, right  
20 across the Corporation. In operating expenses, in  
21 wages, in claims, particularly in the PIPP claims.  
22 All of that still happens. All of that indexation  
23 still happens to those (INDISCERNIBLE) whether we have  
24 real return bonds in the portfolio or not.

25                   On the claims incurred front I note

1 that Mr. Williams made reference to a couple times was  
2 a little ounce of conservatism, Ms. Low's words,  
3 little ounce of conservatism, right in line with the  
4 Corporation's mandate, risk management, rate  
5 stability, that little ounce of conservatism, and it's  
6 there with investments, there will claim -- rate  
7 making and forecasting.

8                   Mr. Sahasrabuddhe, so the second part,  
9 that's basically the -- the expense side of the CAC,  
10 Mr. Sahasrabuddhe, he took aim at our coverages. And  
11 you heard Mr. Williams say, well, only where they  
12 differed materially did he bring it to this Board's  
13 attention.

14                   But we'd note there's no parameters in  
15 the report of how that was determined. What was his  
16 materiality test? We don't have that.

17                   So, it wasn't just the rodents that  
18 didn't meet the Oliver Wyman materiality test, some of  
19 the other coverages didn't either, but we don't know  
20 what that test was. How did he measure that? That's  
21 an important fact.

22

23                   (BRIEF PAUSE)

24

25                   MR. STEVE SCARFONE: I think, based on

1 what I heard, was, well, he just eyeballed it based on  
2 that blue bar graph. That was suggested this morning.  
3 That's -- that's the materiality test right that. If  
4 you eyeball that blue bar graph, and then you'll find  
5 out how Oliver Wyman determined what was material and  
6 what wasn't; kept it from us.

7

8 (BRIEF PAUSE)

9

10 MR. STEVE SCARFONE: I'm just going  
11 through this. I don't think I need to reply.

12

13 (BRIEF PAUSE)

14

15 MR. STEVE SCARFONE: The Board is  
16 aware that, you know, if the base rates of DSR  
17 increased by 5 percent, that would be a real problem  
18 for our customers.

19

20 (BRIEF PAUSE)

21

22 MR. STEVE SCARFONE: On the capital  
23 requirements and the -- and the new legislation and  
24 the -- and the Capital Management Plan, most of the  
25 concern it seems is that there's no obligation for

1 MPIC to bring an application to issue rebates. And --  
2 and maybe that's how this Board interprets the  
3 legislation. I don't know.

4 But what you also need to consider is  
5 the evidence of Mr. Giesbrecht where he said MPIC has  
6 no intention to hold monies beyond the 120 percent  
7 threshold, his evidence. (INDISCERNIBLE) has no  
8 intention to do that.

9

10 (BRIEF PAUSE)

11

12 MR. STEVE SCARFONE: And then lastly,  
13 I just want to deal with the recommendations, or as I  
14 call them, the numbers that the CAC has put to this  
15 Board in contrast to what my client is seeking in  
16 terms of an overall rate indication.

17 Here are some of the numbers, the  
18 signal that Mr. Gabor made reference to. The signal  
19 was, well, how about a reduction in revenue  
20 requirement by 2 or 3 percent?

21 And on corporate operating expenses,  
22 well, they're up by 44 million, that's higher than  
23 inflation, so probably should have been 19 million for  
24 inflation only, so they're 25 million over the  
25 inflation adjustment operating expenses.

1                   And he's also saying there's some  
2 prudency opportunities here. Well, \$5 million to MPI  
3 2.0 special services, there's a prudency opportunity.

4                   Another prudency opportunity is \$2  
5 million in loss prevention. My friend, Mr. Monnin,  
6 wouldn't like that too much.

7                   But when you take all those numbers  
8 together, what does it mean to Mr. Williams? All of  
9 that, we couldn't figure it out, but Mr. Williams  
10 says, well, what that means it between 5 or 6 percent  
11 to the rate indication. That's \$60 million...

12

13   (BRIEF PAUSE)

14

15                   MR. STEVE SCARFONE:   ...\$60 million  
16 less in revenue. And while a lot of that is  
17 attributable to FTEs, some of it's for claims,  
18 obviously.

19                   So, we don't want to understate our  
20 revenue requirement to pay our claims. I think we can  
21 all agree on that. And a reduction like that that  
22 would impact the hiring of the FTEs that this  
23 Corporation has proposed, essentially, brings NOVA to  
24 a halt. NOVA stops moving with \$60 million less in  
25 revenue.

1                   And the -- the employees that you heard  
2 that are now teaming up with Ms. Low to help her carry  
3 out some of these actuarial functions, those employees  
4 might be gone.

5                   The Corporation is making efforts that  
6 it requires to service Manitobans, and that's what  
7 this rate application is about. Mr. Guerra said  
8 yesterday not everything is right, but we're trying to  
9 fix it. And a negative 6 percent rate indication  
10 would put an end to all of that.

11                   And that's -- Mr. Guerra has a few  
12 comments, I think, on some of the other Interveners'  
13 closing arguments.

14                   MR. ANTHONY GUERRA: Thank you, Mr.  
15 Scarfone. Actually, I just want to limit my -- my  
16 response to one (1) item from the Taxi Coalition's  
17 closing. And it just became a little bit more  
18 confusing as to exactly what the directive that the  
19 Taxi Coalition would have this Board (INDISCERNIBLE)  
20 after the oral submissions, but I -- I'm cognizant of  
21 what was in the written closing.

22                   So, I'm going to address more so what's  
23 in their written closing just to make sure that it's  
24 adequately (INDISCERNIBLE).

25                   And so, the written closing asks two

1 (2) questions, first of all, what are the parameters  
2 within which a rebate will be brought and how will MPI  
3 (INDISCERNIBLE) factor in?

4 The -- the importance of relying upon  
5 an audited MPI MCT calculation cannot be understated.  
6 There was some discussion in the transcripts  
7 (INDISCERNIBLE) Mr. Giesbrecht who highlighted the  
8 importance of having an audited MCT statement and for  
9 reference, that's at pages 2,130 to 2,133 of the  
10 transcripts.

11 Basically, all that -- what that  
12 transcript section talks about is the difference --  
13 there was a difference, a material difference, in MCT  
14 -- excuse me -- the MCT calculations after the audit  
15 was complete.

16 So, it's important to have accurate  
17 numbers for the fiscal year. What if MPI has that  
18 evidence by June or July, I believe was the evidence,  
19 when that audited calculation would be in hand. What  
20 if MPI has that information that at the beginning of  
21 the fiscal year, so now we're talking about April of a  
22 -- of a given year, that the MCT is higher than 120  
23 percent, so what -- what happens at that point?

24 Well, there's a three (3) year gap,  
25 right. So, there's the -- sorry, three (3) year --

1 there's a three (3) months. There's the April,  
2 there's the May, there's a June, and maybe there's  
3 even a July between when MPI starts its fiscal year  
4 and when it gets its audited MCT (INDISCERNIBLE).

5           What if something happens in the  
6 meantime, if there's a significant event like  
7 inflation or a pandemic or a war in Europe, or  
8 whatever the case is, fill in the gap here, something  
9 that comes to the attention of MPI that now suggests  
10 applying for a rebate no longer makes financial sense?

11           What is MPI to do in that situation?  
12 Is it to rely upon what information comes from the  
13 audited MCT calculations and say, well, that's what  
14 the start of the fiscal year was, and so we have to  
15 act blindly now going into the future and say, well,  
16 we have to ignore everything that's happening now  
17 because back in April we had an MCT that was  
18 (INDISCERNIBLE). That cannot be how we read this  
19 legislation.

20           So, what -- what we're basically  
21 talking about is -- is the time period between when  
22 MPI starts its fiscal year and when it brings its  
23 General Rate Application.

24           If something comes about in that time  
25 to suggest that this needs to (INDISCERNIBLE)

1 different direction, well, of course, MPI's going to  
2 make the decision not to bring a rebate application.

3           Also, I would submit that, if MPI had  
4 in its -- in its possession or didn't have in its  
5 possession material to suggest that a rate application  
6 was not warranted, but in the course of bringing a  
7 rebate application came into such possession that it  
8 could be in its power to rescind an application or  
9 abandon an application because it no longer makes  
10 financial sense or -- or fiscally prudent to the  
11 Corporation.

12           And so that discretion on the part of  
13 MPI is (INDISCERNIBLE) what we've seen here is  
14 instances where there is that lack of discretion. You  
15 know, weird things can happen. We saw that with the  
16 last Capital Management Plan.

17           And so, we would submit that in  
18 drafting Bill 45, legislature provided MPI with --  
19 with a tool to address potential unexpected events  
20 rather that could then question whether or not a  
21 rebate was (INDISCERNIBLE) Taxi Coalition wants the  
22 PUB to read into Section 18 the ability to require MPI  
23 to bring a rebate application.

24           And we would submit that that simply  
25 cannot be found within the Act. Section 18(4) talks

1 about there being no rebates unless four (4)  
2 conditions are met. The first one being MCT has to be  
3 above 120 percent.

4 Two, MPI has to apply for a rebate.

5 Three, the PUB has to approve the  
6 rebate application.

7 And four, the rebate must not result in  
8 projected revenue being (INDISCERNIBLE) 100 percent  
9 MCT. And so, all of these conditions have to be met  
10 before rebate can be issued.

11 Can the PUB require MPI to bring a  
12 rebate application that it doesn't believe is fiscally  
13 prudent? How would that work practically? When does  
14 that direction get issued? Does it get issued with  
15 the order from, let's say, for example, this rate  
16 application in December?

17 What if the audited MCT in June of that  
18 next year, what if it doesn't meet the 120 percent  
19 threshold? Would we have to, at that point, file a  
20 review in variance application? Would it be with the  
21 same time as the GRA filing? What if MPI ignores the  
22 directive?

23 There's all these concerns that arise  
24 from what happens if there was a direction to that  
25 effect. Would the directive simply be a blank notice

1 that MPI must file an application if its audited MCT  
2 calculation is above the 120 percent mark?

3 We go with that for moment. Let's say  
4 that's the -- that's the requirement. Then what  
5 happens next?

6 MPI would file, what it believes to be,  
7 a fiscally imprudent application for a rebate. It  
8 would then spend the entirety of that process arguing  
9 against its own application, the relief that "it  
10 applied for." Presenting evidence to support that the  
11 MCT would actually fall below the 100 percent  
12 requirement if the rebate was issued.

13 This would put MPI in an impossible  
14 position and it wouldn't be an application by MPI.  
15 It would be, in effect, an absurdity.

16 And I would ask Ms. Schubert, if you  
17 could just pull up quote from the Rizzo -- N. Rizzo  
18 Shoes (phonetic) decision of the Supreme Court of  
19 Canada.

20 And at Section 27, the Supreme Court  
21 has a -- a helpful identification of what the -- the  
22 principle of statutory interpretation means in terms  
23 of (INDISCERNIBLE) absurd consequences. It says:

24 "The well established principle of  
25 statutory interpretation that the

1 legislature did not intend to  
2 produce absurd consequence.  
3 (INDISCERNIBLE) supra, the  
4 interpretation can be considered  
5 absurd if it leads to ridiculous or  
6 frivolous consequences, if it is  
7 extremely unreasonable, or  
8 inequitable, if it is illogical or  
9 incoherent, or if it isn't  
10 compatible with other provisions or  
11 with the object of the legislative  
12 enactment."

13 Sullivan (phonetic) echoes these  
14 comments, noting that the label of absurdity can be  
15 attached to interpretations which defeat the purpose  
16 of the statute or render some aspect of it pointless  
17 or futile.

18 And I think that's important for this  
19 Board to consider in terms of thinking about what that  
20 type of direction -- if it is thinking about that type  
21 of directive, what that might actually mean for MPI in  
22 this process going forward.

23 So then, the question might become,  
24 Then what can be done to hold MPI accountable for its  
25 decision regarding rebates or for not applying for

1 rebate?

2                   And so, the Taxi Coalition makes two  
3 (2) recommendations -- or at least -- sorry, one (1)  
4 recommendation that I think MPI would agree with and,  
5 that is, MPI should report annually on MCT ratios in  
6 its MCT forecast. MPI already does this and submits  
7 that this is a reasonable request.

8                   And in the PUB rate application  
9 process, rather, the question is, Can MPI be asked why  
10 it didn't bring a rate -- a rebate application? And  
11 can it -- can their existing process test its reasons  
12 by asking it to produce information to that effect?

13                   We would suggest that that is, in fact,  
14 entirely what this could look like. If there was no  
15 rebate application by MPI, Interveners, maybe counsel  
16 could ask questions about why that was not the case,  
17 and to provide its calculations or supporting  
18 information to suggest that that was a fiscally  
19 prudent decision not to apply for a rebate.

20                   And this Board can publically embarrass  
21 MPI if it chose not to apply for a rebate application  
22 and couldn't justify its reasons for not doing so.

23                   In terms of the timing of the rebate  
24 application, the recommendation by the Taxi Coalition  
25 at paragraph 112 of its closing, PUB can't require MPI

1 to make an application for a rebate. So the timing of  
2 the application part is a bit difficult to understand.

3 I would also suggest that there might  
4 be a situation where MPI actually wants to apply for a  
5 rebate. And so, the question at that point is, Should  
6 there be time limits in terms of its application to do  
7 so? Should MPI be precluded from seeking a rebate  
8 simply because it brings its application in October  
9 versus July?

10 I would just caution, perhaps, this  
11 Board in -- in saying that a rebate application should  
12 be brought by a certain time or a decision upon which  
13 the Corporation would make in order to prevent a  
14 rebate application should be made by a certain time.  
15 That -- that could backfire on everybody in ways that  
16 we -- we don't want.

17 And also, finally, on the timing of the  
18 MCT projection, the -- the issue there is should we  
19 rely upon information at a point in time? Or should  
20 we rely upon information that is the best, kind of,  
21 available at the time?

22 And we do that all the time. We file  
23 an October update. And the October update does update  
24 our MCT projections in some cases.

25 So we would submit by -- by shoehorning

1 MPI into a specific point in time, we could be  
2 completely missing the boat on -- on current events  
3 that could be of material concern for -- for the  
4 fiscal health of the Corporation.

5 So in that regard, MPI would certainly  
6 not support any time limits in terms of the  
7 projection, in terms of its fiscal -- fiscal  
8 (INDISCERNIBLE).

9 So subject to any questions, those are  
10 our (INDISCERNIBLE).

11 THE PANEL CHAIRPERSON: Thank you, Mr.  
12 Guerra. Ms. Nemeč...?

13

14 (BRIEF PAUSE)

15

16 THE PANEL CHAIRPERSON: This concludes  
17 the 2023 Manitoba Public Insurance Corporation General  
18 Rate Application Hearing. On behalf of the Board  
19 panel, I would like to thank everyone for their  
20 cooperation throughout this Hearing.

21 This includes the MPI witnesses and  
22 their counsel, including Mr. Herbelin, Mr. Giesbrecht,  
23 Ms. Low, Ms. Jatana, Mr. Parti, Mr. Gandhi, Mr. Mitra,  
24 Mr. Masud, Ms. Ostapowich, Mr. Bunston, Mr. Prystupa,  
25 Ms. Mann, Mr. Sarginson, Mr. Doell, Mr. Campbell, Mr.

1 Ramirez, Mr. Dessler, Mr. Triggs, Mr. Scarfone, and  
2 Mr. Guerra.

3 Also the many MPI representatives who  
4 provided back row support during these proceedings.

5 And the witnesses who appeared before  
6 the Board; Mr. Lloyd of Mercer, Dr. Hall, Mr. Iles of  
7 PwC, Mr. Sahasrabuddhe of Oliver Wyman.

8 The Interveners and their respective  
9 counsel: for CAC, Mr. Williams and Mr. Klassen; for  
10 CMMG, Ms. Meek; for the Taxi Coalition, Ms. Wittman  
11 and Ms. Nelko; for IBAM, Mr. Weinstein and Ms. Sokal;  
12 and for Bike Winnipeg, Mr. Monnin.

13 I'd like to thank the presenters who  
14 made their submissions this year.

15 And the people at the Public Utilities  
16 Board: the secretary of the Board, Dr. Christle; the  
17 assistant to the associate secretary of the Board, Ms.  
18 Dubois; our judicial hearing assistant, Ms. Schubert;  
19 our administrative officer, Ms. Viagis (phonetic); and  
20 our executive coordinator, Ms. Carrier (phonetic).

21 Our court reporter, Digi-Tran,  
22 including Ms. Woodworth.

23 Advisors, Mr. Cathcart and Mr.  
24 Mantketelow.

25 And our counsel, Ms. McCandless, Mr.

1 Watchman, and Ms. Moore.

2                   The Board also appreciates the members  
3 of the public who took time to follow the proceedings  
4 via our live streaming on the PUB website.

5                   The panel will be meeting in the very  
6 near future to deliberate and make our final  
7 determinations on the matters before us.

8                   And that concludes our Hearing. Thank  
9 you.

10

11 --- Upon recessing at 4:09 p.m.
